THE MONETARY TIMES
Head Office: 62 Church Street, TORONTO
MONTREAL WINNIPEG

Why

THE MONETARY TIMES OF CANADA IS ONE OF THE BEST ADVERTISING MEDIUMS

1 **Reputation.** "*The Monetary Times*" is conducted upon lines which have gained for it the highest reputation for integrity and independence of judgment, and its opinions and pronouncements as regards new issues offered for public subscription, and other like matters with which it essentially deals, are respected accordingly.

2. **Circulation.** "*The Monetary Times*" has the largest circulation of any financial and insurance weekly in Canada. It circulates extensively not only throughout Canada but also in the United Kingdom and in every financial center throughout the world.

3.—**Readers.** "*The Monetary Times*" by the nature of its contents is of interest to all classes of investors. It appeals to a vast and constantly increasing number of readers, including Government and Municipal Authorities, Bankers, Insurance Officials, Directors, Managers and Secretaries of Companies and members of the various Stock Exchanges—by the great majority of whom the paper is not only read, but carefully filed for reference.

4.—**Prominence of Advertisements.** The space available for advertisements being strictly limited, announcements appearing therein secure very marked prominence.

We can guarantee all advertisements either alongside or opposite reading matter.

5.—**Advertising Policy.** Advertisements which are apparently designed to entrap the unwary, to induce people to part with hard-earned savings, and to tempt necessitous debtors to take almost the only step which could possibly make their financial troubles greater, are consistently declined by "*The Monetary Times*." The business of newspaper publishing is not in the opinion of the owners of "*The Monetary Times*," one which is free from moral responsibility.

For these reasons "*The Monetary Times*" offers an excellent, if not absolutely unique, medium for the announcements of all who desire to cultivate business with a clientèle of the highest class.

Sample copies and advertising rates cheerfully supplied.

The Monetary Times of Canada

Canadian Real Estate

VALUE *of land will show natural increase in a country where nation building is proceeding; where new comers arrive in thousands; where natural resources are a foundation for the uprising structure.*

By THE EDITOR.

Canadian real estate often is blamed for trade depression, money losses, financial panics and a score of other disasters. The blame for speculative troubles in regard to real estate should be laid upon unscrupulous vendors and careless purchasers, not upon reputable firms, careful buyers and upon the real estate itself. The buying of property in Canada sometimes has come into disrepute from time to time for the same reason that industrial bonds or mining stocks or oil shares or other things sometimes enter disfavor—because unscrupulousness and simplicity become mixed with honest enterprises and endeavor. Real estate in Canada is an excellent investment if the man who sells it intends to give good value for money received and if the man who buys it uses his commonsense.

The transformation of prairie land into farm land and into towns and cities, the growth of existing cities and the housing of constant new population, obviously act as factors in the appreciation of land values. If dishonesty, extreme optimism and lack of foresight run away with a reasonable head, so much the worse for the investor, but the basic facts still remain. The population of Saskatchewan, as an example of growth, has increased fivefold in ten years, which is proportionately the largest immigration problem ever handled by any country.

The hundreds of thousands of newcomers who arrive in Canada every year must have houses and gardens, sewers and sidewalks, paved streets, fire protection, proper civic government, railroads, and so on. They must be fed and clothed and supplied with all the necessities which modern life demand. For this there must be cultivated land and factories. The great distances of the country require the establishment of factories in many sections and of warehouses at numerous points. Giving the newcomer a home and all that it means, is a big task, and one which cannot do otherwise than affect land values.

It will be of interest to examine the record of growth in Canada in various directions. The growth of Toronto, for instance, is probably unequalled on the American continent. When the city was incorporated in 1834 its population was 9,254. Between 1900 and 1911, there occurred an increase of 81 per cent., and since then there has been a gain of more than 35,000 every year. The housing of so many new arrivals in one city is partly responsible for such a fact that in 1913 approximately 40,000 real estate transactions were negotiated in Toronto and its suburbs. The area of the city is 30 square miles compared with Buffalo's 42 square miles, Cleveland's 45 and Detroit's 40 square miles. The plans of the Toronto Harbor Commission, providing for the reclamation of 644 acres of marsh land, will also provide for a large industrial area, affording sites for 1,000 new factories. The benefits of such an extensive scheme will be realized easily. Such development is proceeding in many parts of Canada.

The rapidity of development in the cities has led to a remarkable combination of ancient and modern buildings. The modest frame office frequently stands beside the high fireproof skyscraper. It means that there is considerable rebuilding to be done. This fact was noted by a London stockbroker, who, upon his return to England from Canada, said: "A vast amount of capital will be required practically to rebuild Montreal. The principal streets are occupied by a medley of shacks and fine buildings, the former in large preponderance. The shacks must eventually come down."

The annual report for 1913 of Mr. C. F. Roland, industrial commissioner of Winnipeg, gave some specific instances illustrating the increase of values of downtown property in that city in ten years. The following may be cited as typical examples:—

Property	Price per frontage ft., 1902	Approximate price frontage ft., 1913
"Free Press" property south-east corner Portage Avenue and Garry Street (two blocks west from Main Street) .	$450	$4,500
Eaton store property, between Donald Street and Hargrave Street (four blocks west from Main Street)	200	4,500
South-west corner Ellice Avenue and Smith Street (one block north of Portage Avenue and three blocks west of Main Street)	150	2,500 (sale)
North-east corner of Portage Avenue and Furby Street (sixteen blocks from Main Street)	60	1,521 (sale)
North-east corner Notre Dame Avenue and Albert Street (one block northwest from Portage Avenue and distance of about two blocks from Main Street)	150	2,500 (sale)

Such examples are [illegible]le in any developing section of the country.

The following figures, showing the value of building permits in Canada for a number of years, are substantial testimony to the purchase of land, actually for building purposes. This table shows the total value of new buildings erected and of alterations and extensions from 1905 to 1913 inclusive:

Year	Number of [illegible]	Total value of buildings erected
[illegible]	11	$[illegible]
1906	41	5[illegible],14[illegible]04
[illegible]	[illegible]	[illegible]7,087
[illegible]	[illegible]	[illegible],223,398
1909	[illegible]	[illegible]
[illegible]	[illegible]	11[illegible],121,7[illegible]
[illegible]	[illegible]	[illegible],7[illegible],500
[illegible]	[illegible]	[illegible],941,446
1913	100	17[illegible],8[illegible]

The figures show a gradual increase until 1913, the year of the world-wide financial stringency. Despite that fact, 100 towns and cities in Canada were responsible for building operations valued at $178,000,000.

In the next column, the value of building operations in twenty-five towns and cities in Canada are tabulated. The value of these operations for the five years, 1909 to 1913, are $625,077,888. These figures, which are taken from the records of the department of labor, Ottawa, are those of only 25 points in Canada, but include the big cities. The complete building figures for 1913 in 100 localities, for instance, were valued at $178,000,000.

Of the total $625,077,888 for 25 towns and cities to 1913, four cities, namely, Montreal, Toronto, Winnipeg and Vancouver, were responsible for $358,205,050, as shown in the following table:

City	Value building operations 1909-1913 inclusive
Montreal	$91,095,210
Toronto	118,081,072
Winnipeg	81,244,925
Vancouver	67,872,934
	$358,205,050

While most of the cities have made good records, Toronto has made the most remarkable. Every year it has shown the largest value of any city in Canada in the matter of building permits. Of the total of the four leading cities for five years, namely, $358,205,050, Toronto accounts for one-third, or $118,081,072.

The value of building permits in the 25 localities stated in the accompanying table has increased from $[illegible] in 1909 to $186,000,000 in 1912, the figures [illegible]. In 1913, there was a comparatively small decrease, caused primarily by the financial stringency [illegible] most countries the world over.

Of the permits taken out in Toronto in 1913 for the [illegible] dwellings, 75 per cent. of the houses [illegible] construction. These brick houses [illegible] according to the permits, valued at $1[illegible] [illegible] were issued for 71 factories to cost [illegible] $1,[illegible] for the [illegible] $1,[illegible]. 58 were [illegible] $[illegible], and 23 [illegible] the total of [illegible].

Value of Building Permits at 25 Points in Canada, 1909-1913.

New Westminster			1,126,355	1,634,508	958,975
TOTAL	$[illegible]6,112,729	$96,761,784	$127,378,469	$186,580,431	$149,144,475

Another example of the substantial character of buildings in Canada may be gathered from the nature of the 3,483 permits issued in Calgary in 1912 as follows: 109 business buildings, 52 warehouses and factories, 243 residences over $4,000, 2,173 residences $1,000 to $4,000, 44 apartments, hotels, 12 schools, Canadian Pacific Railway machine shops, 12 churches, 4 fire halls, 3 government buildings, 4 theatre buildings, 9 livery stables, 4 garages, 1 hospital, and 813 small buildings, alterations and small extensions.

Naturally the inflow of population to Canada has caused a good demand for property and an increase in values. In 1912, a land speculation craze was at its height in the West, and undoubtedly many people, both buyers and sellers, lost all sense of proportion regarding values. Eastern Canada also was not free from this complaint. Since that time matters have been adjusting themselves in the natural order of things. The fact that the chartered banks of Canada do not lend money on real estate acts invariably as a brake upon wild speculation in this direction. Sir Edmund Walker, speaking at the annual meeting of the Canadian Bank of Commerce in November, 1913, said:—

"Some undue speculation in real estate, and some over-building in connection with public improvements, is inevitable amidst such astonishing growth and prosperity, and it would be foolish to expect anything else. We are now realizing more accurately the value of real estate, and through the process we are gaining an experience which is absolutely necessary to the foundations of a sound prosperity. The western country as a whole will not again have to suffer from this particular ailment of young communities."

These words, from such an authority, may be accepted with every confidence, and are a refreshing change from the numerous utterances that have condemned real estate transactions simply because they are real estate transactions.

The subdivision craze in Western Canada in 1912, and to a lesser extent in Eastern Canada, did not help Canada's credit or the cause of real estate as a good investment. Suddenly, without warning, many men seemed to realize the immense possibilities existing in Canada, and what a wonderful country it will be ten, fifteen years hence. They immediately proceeded to gather clients, selling Canadian land futures, and discounting them unreasonably. Men have made money in the West by holding lands which, ten years ago, perhaps, they could not sell. Men have made money despite themselves. Men with vision have held their property, sold it for a modest profit, repurchased at an advanced price, sold it again, chuckling meantime, and have yet lived to chide themselves for not holding for another two years. Men have tilled farm land till the city has rubbed shoulders with it. Only a few years ago, corner lots in Toronto, Montreal, Winnipeg, Regina, Edmonton, Calgary, Saskatoon, and elsewhere went begging for purchasers. Legitimate and rapid growth has trebled, and more, their value.

In a country, where nation-building is the first work, art and duty; where railroad steel is laid by hundred miles every year; where acreage under cultivation increases at a great pace; where new population coming in thousands is part of the life; where natural resources make a strong foundation; where outside capital flows unceasingly; where, in a word, growth is the order of the day, there must be a natural increase in land values. The recognition of this fact has been the basis of speculation. The unfavorable factor is a floating army of land sharks, discounting that fact again and again, until the holders of hundreds of acres and thousands of so-called city and town lots have their money locked in land. Fortunately, the sound business and financial men of Canada are unanimous as to the undesirability of these conditions.

Real estate in the Dominion, purchased with open eyes and good judgment, is one of the best investments in a country replete with good investments. Inside town and city property has not, generally speaking, got beyond bounds. The rapid growth of our municipalities brings with it a legitimate increase in the values of city property. Farm lands, sold as farm lands, can be bought reasonably. The splendid opportunities which exist for such investments are almost innumerable. Which makes it still more unfortunate that we sometimes have the unnecessary company of some unscrupulous sellers.

As a side light on real estate as an investment, it is interesting to know that 73 loan and trust companies and building societies in Canada in 1912 had under mortgage, property valued at $418,000,000. The amount overdue and in default on mortgage was less than $2,000,000—a striking record. All the Canadian loan companies, throughout the sharp depression and stringency of 1913, reported that payments of interest and principal were being well met.

There will always be gambling in investment spheres. Sometimes it is in mines or stocks or oil wells or real estate, or other things. But the fact that there is gambling, does not remove the existence of sound investments. This applies particularly to real estate.

Canada is at present in a state of transition from a construction period to one of production. Sir George Paish, the English authority, on his return to London after a visit to Canada in 1913, said: "British investors, who have shown so much faith in the future of Canada by subscribing capital freely for the government, municipalities and railways, would now do well to consider the question of forming trusts and loan companies for the purpose of assisting settlers on to the land, especially as farm lands in Canada are not at inflated prices. By so doing they would render powerful help to the Canadian people to produce the natural wealth for which so much municipal, railway, banking and trading machinery has been provided. It is evident that the machinery created to take care of the production of the country is sufficient to deal with at least twice, if not three times, the existing output, and it is obvious that the burden of interest upon the immense amount of capital supplied will be a heavy one until the productive power of the country is greatly increased."

Sir George also stated, if the British people continue to invest in Canada, and Canada energetically applies itself to production, that "the growth of production and income will be so rapid that even those people who are confident about the future of Canada will be surprised by the vastness of the country's output in a few years."

REVIEW OF THE MONTH

Canadian Flotations in London—Investment Offerings—Dividend Changes—New Stock Exchange Listings

CANADIAN FLOTATIONS IN LONDON

The following flotations, amounting to £6,168,000, of interest to Canadians, were made in London during June:—

Dominion Government.—£5,000,000 4 per cent. stock at 98.

Mexican Northern Power Company, Limited.—$200,000 6 per cent. prior lien 30-year gold bonds at £82. 10s. per bond of $500.

City of Moose Jaw.—£100,000 5 per cent.

Montreal Central Terminal Company.—£1,028,000 5 per cent. first mortgage bonds at 90.

Province of Quebec.—£1,000,000 4½ per cent. registered stock at par.

SPECULATIVE AND INVESTMENT OFFERINGS

The following speculative and investment offerings were among those made in Canada during June:—

Le Comptoir Mobilier Franco-Canadien, Montreal.—$300,000 8 per cent. mortgage bonds.

Howe Sound and Northern Development Company, Limited.—$300,000 6 per cent. debentures.

Cenners-Till Film Company, Limited.—100 shares common stock at $100 each.

JUNE DIVIDEND CHANGES

Smart, Woods, Limited.—The dividend on the common stock was deferred.

Toronto Paper Manufacturing Company, Limited, discontinued their dividend for the present, owing to trade depression.

Standard Reliance Mortgage Corporation increased their dividend from 6 to 7 per cent., shareholders to receive the increase on the half-yearly payments due July 1st.

Hudson's Bay Company declared a dividend of 5 shillings.

NEW STOCK EXCHANGE LISTING

The following security was listed during June —

Canadian Salt Company, Limited.—$110,000 additional ordinary stock on the Toronto Stock Exchange.

COMPANIES CHANGING NAMES.

The following companies with Dominion charters have changed their names:—

Circulation	102,997,936	93,064,460	97,760,921	— 5.08	+ 5.04

---

*Including loans to municipalities.

The principal items in the chartered bank statement for May are indicated above. Deposits after notice showed an increase of $10,000,000, while deposits on demand showed a decrease of a similar extent, while deposits outside of Canada, which in April were $113,403,809, have been decreased by approximately $18,000,000, the total being $95,092,409. The banks' total liabilities show a decrease of $10,000,000, while the assets are decreased by $13,000,000. Circulation was larger by $4,700,000.

The following table shows the trend of the Canadian loans accounts for the past thirteen months:—

Loans.	Current in Canada.	Call in Canada.
1913—May	$898,959,650	$69,982,540
June	891,260,009	68,642,377
July	901,559,453	67,091,255
August	899,132,894	67,233,983
September	903,717,013	70,047,291
October	900,159,736	71,118,255
November	875,888,832	70,123,101
December	852,906,548	72,862,971
1914—January	840,883,759	71,248,242
February	842,084,677	71,374,602
March	855,381,265	69,088,240
April	865,873,876	68,523,774
May	872,152,263	67,210,504

Current loans in Canada were increased during the month $7,000,000, reaching the highest point since last October, while call loans during the same period were decreased by just $1,000,000, reaching the lowest point since August, 1913.

The following table shows the expansion of loans at home and abroad, during the past four years:

May.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1910	$613,216,518	$28,011,462	$58,150,[illegible]	$125,48[illegible]
1911	708,093,677	32,918,314	57,700,853	88,745,[illegible]
1912	837,282,550	33,478,564	68,305,157	115,822,77[illegible]
1913	898,959,650	37,691,786	69,982,540	96,151,209
1914	872,152,263	51,812,875	67,210,504	129,897,328

Call loans elsewhere in April were $130,000,000, while in statement appearing above are shown to be slightly in excess of $129,000,000. Call loans in Canada are less a little over $250,000. Current loans elsewhere show a decrease of $3,000,000 since the last statement, while current loans in Canada show an increase, including loans to municipalities, of $7,000,000. From the figures in the preceding table it will be seen that current loans elsewhere are at the highest figure for the month of May during the last five years, as also are call loans elsewhere. Both current and call loans in Canada are at a lower level than they were in May, 1913.

The following table shows the course of domestic deposit accounts for the past thirteen months:—

	On demand.	After notice.
1913—May	$364,159,642	$630,755,603
June	362,709,928	622,928,969
July	350,585,190	621,347,388
August	358,121,925	619,032,847
September	381,737,513	621,249,585
October	380,850,507	621,511,207
November	384,486,046	625,803,150
December	381,375,509	624,692,320
1914—January	330,811,339	635,135,955
February	337,510,595	640,927,138
March	345,590,642	646,143,604
April	350,515,993	653,679,223
May	340,748,488	663,945,753

While Canadian deposits after notice continue a growth which has been evident since August last, those on demand for the first time since February show a diminution.

The deposits record for the past five years for the month of May is given in the following table compiled by *The Monetary Times*:—

May.	On demand.	After notice.	Total.
1910	$256,651,635	$524,680,979	$ 781,332,614
1911	298,784,206	562,209,148	860,993,354
1912	376,953,217	625,294,344	1,002,247,561
1913	364,159,642	630,755,603	994,915,245
1914	340,748,488	663,945,753	1,004,694,241

For the second time in the last five years during the month of May, total deposits stand in excess of $1,000,000,000.

◆

DEATH OF MR. E. W. COX.

The death of Mr. E. W. Cox, president of the Canada Life Assurance Company, in England, was not expected, as those who were in close touch with him had reports of favorable progress being made. The late Mr. Cox was born at Peterboro, he was educated at the University of Toronto, and entered Senator Cox's firm at Peterboro' in 1882, and was appointed manager of the Eastern Ontario branch of the Canada Life in 1887, and, as assistant manager at the head office in Toronto in 1900. Two years later he became general manager, and he was elected president at the beginning of the present year, succeeding his late father, Senator Cox. Besides the Canada Life, he was associated with a number of companies, including the Imperial Guarantee and Accident, Toronto Savings and Loan, Provident Investment, Central Canada Loan and Savings, Dominion Securities, National Trust, Canadian General Electric, American Assurance, Dunlop Tire, Robert Simpson, Canada Cement, Western Assurance and Imperial Bank.

T. C. BOVILLE,
Deputy Minister of Finance.

MONETARY TIMES FINDS LONDON CRITICAL

(The following cable messages of the Canadian Associated Press and the Montreal Star are printed by special arrangement.)

CANADA SHOULD KEEP OUT OF LONDON

That is What Best Authorities Say—Decrease in Treasury Bills—A Word for Mederic Martin

(Staff Correspondence.)

London, [illegible]

It [illegible] Canada [illegible] that [illegible] proper [illegible] in the [illegible] and uncertainty, that the London [illegible] a marked degree [illegible] Canadian [illegible] as a typical instance, a direct [illegible] with [illegible] in non-determination [illegible] depressed [illegible] have [illegible] steadily.

Usually, at this season of the year, a steady stream of new [illegible] to all parts of the world. This year they are [illegible] so far as Canada is concerned, London is not at all anxious to [illegible] new security issues at this time. The dull [illegible] conditions in the Dominion, some of the phases of Canadian real estate speculation, the result of the Dominion [illegible] record of [illegible] Canadian industrials, the end of an active period of railroad construction, the recent [illegible] Canadian railroad [illegible], the Grenfell failure and several other such incidents all tend to [illegible] a passing shadow.

Keep Out of Market.

The advice of the leading authorities on Canadian finance here is that Canada should keep out of this market for the time being. [illegible] issues, if made under the present circumstances, must prove a complete failure. As to municipals, a prominent authority here suggests that what are known as the second rate or smaller cities and towns, should postpone their financing as long as possible. If bonds must be sold, they should find a market for them elsewhere than in London. It is expected that the larger cities, such as Montreal, Winnipeg, Toronto and Vancouver will come to this market, but even in these cases, there is anxiety as to the [illegible] issues, and the outcome of issues of any kind [illegible] is not likely to be very favorable.

The [illegible] on the part of Montreal people who should know better, regarding the financing of that city, have been [illegible] here. It is generally conceded that Montreal, through [illegible], has been well financed in the past. The [illegible] of Mr. Mederic Martin, as mayor, [illegible] of Montreal, and his [illegible] are [illegible] not helping the credit of the city of Montreal. London is a keen critic of all financing, however far away [illegible] the question of Montreal's [illegible] has [illegible] in several unexpected quarters. [illegible] Montreal's credit, but Mr. Martin [illegible] such a delicate matter [illegible] is [illegible] regarded favorably here [illegible] the bonds [illegible] ties.

[illegible]

[illegible]

Some of those who raised money in this way have had occasion to regret their action. Treasury notes often have to be renewed, and on every renewal, there is a commission to pay. Bankers here say that money should be taken when it can be had at any reasonable price, and a good offer should not be refused. This is good advice, but, unfortunately, Canadian borrowers have not always profited by it.

British bankers, brokers and investors are happy in analysis. This reputation dates back a long time, and it does not take long for a visitor to gain a high appreciation of [illegible] city's opinion. The Canadian Northern Railway financing is a typical example. While in Canada the fight was raging as to the proposed bond guarantee, the discussion centred to no small extent around the argument that such a crisis should never have happened. In London the inevitable was accepted and the discussion was confined entirely as to what was the best way to meet the case. While the Opposition at Ottawa was crying over the spilled milk, London was wondering how the government would get the milk back into the bottle, and how much would be wasted in the process.

What London Thinks.

The general opinion of authorities in this centre regarding the Canadian situation may be summarized as follows:—Canada, having completed a period of active railroad construction must turn seriously to the problem of more production. Canadian development has been quite fast enough, and no harm will be done by the present rest and re-adjustment. More conservative development is likely to occur during the next few years, which will be better generally for the country than sharp periods of prosperity and sharp periods of depression. The economic seas will be rippled by moderate waves of depression and prosperity rather than by tumultuous waters of good times and the dead calms of dull business.

After reviewing the situation somewhat on the above lines, one of the most prominent authorities here, said:—"In view of the extraordinary period of prosperity and development, the way that Canada has weathered the storm is really wonderful. Given the same conditions in certain other new countries, probably there would have been a serious smash. This creditable performance on the part of the Dominion I ascribe largely to the conservative policy of the Canadian chartered banks."

Canadian Agency Failure.

The Canadian Agency failure is still a topic of discussion, and some serious developments may occur unless influential pressure is exercised. There seems to be little doubt that an attempt was being made by the Grenfell crowd to secure control of the Grand Trunk Railway. The effort proved a bad failure, and it may be many weeks yet before all its ramifications are brought to light.

As is known, the public subscribed only 12 per cent. of the $25,000,000 Dominion loan issued here last week, the balance being taken by the underwriters. In view of some [illegible] criticism regarding this result, it is interesting to analyse the surrounding circumstances. The fact that the underwriters got 88 per cent. does not mean that the loan is not well received or popular, as it has lately been the custom of investors to refrain from subscribing to loans in the hope of being able to buy later at a discount. In addition, a large portion of such government loans is taken by [illegible] who are not usually in a position to apply for them, [illegible] buy in the market.

The [illegible] of the present loan is to be [illegible] discount at which the scrip is selling, [illegible] and this notwithstanding the large amount [illegible] hands of the underwriters. The result of this [illegible] proof of the wisdom of underwriting [illegible] government would not have been assured of [illegible] addition, if the loan had not been [illegible] the present price of the scrip could not have been [illegible] in the market.

It is generally regarded that the [illegible] was the right one, which means that it was a fair price for the borrower and yet a price which proved attractive to the investor and permitted of the stock being widely distributed and prevented the price of the scrip going to a [illegible] discount. Altogether the Dominion government is to be congratulated on issuing a loan for so large an amount in these [illegible] times but with such favorable results and their standing as the premier colonial security has been fully [illegible].

The issue of £1,028,800 first mortgage 5 per cent. bonds of the Montreal Central Terminal Company here this month received considerable criticism. It is reported that 27 per cent. was taken by the public.

Regarding the much-discussed inclusion of Canadian provincial securities upon the British trustee list, bankers here agree that there seems to be little hope of this being accomplished just yet.—Fred W. Field

FUNDS MUST BE FOUND.

†London, June 26.—Southern Alberta Land debenture holders meet here on Monday to consider the company's position and appoint a committee. The holders have been informed that funds must be provided forthwith to prevent total suspension of operations.

DOMINION LOAN AT PAR.

†London, June 26.—The recent Dominion issue of $25,000,000, which went to a discount of ½ to 1 on the announcement of the small response to the public offering, is now selling at par. Recent issue discounts are British Columbia ⅜, Nova Scotia 1⅜, Vancouver Sewerage 2.

NEW CANADIAN LAND COMPANY.

*London, June 24.—The directors of City Estates, Canada, have registered a new company called New City Estates, Limited, for submission to the shareholders on July 14. The object is to enable the distribution of substantial sums derived from the sale of lands. The original charter provided that no dividends were payable on the common until the preferred shareholders received the capital back.

ON CREDIT AND FAVOR.

*London, June 26.—The Chaplin, Milne, Grenfell and Company failure is rapidly developing into a scandal.

It is proving far worse than was anticipated. It is now feared that a sensational volume of funds and securities have disappeared.

It appears there has been a chain of company financing based almost entirely upon credit and favor and not upon collateral.

GRAND TRUNK BILLS.

†London, June 25.—Ten million dollars' worth of one-year bills were placed yesterday by the Grand Trunk Railway on the basis of 4¾ per cent. These are secured on Grand Trunk 4 per cent. debenture stock, taken at the value of 70, which is considerably below the market price, and are repayable on July 15, 1918.

The money, it is explained, is required for the financing of the Grand Trunk Pacific Railway and various branch lines. It is intended during the coming years to dispose of bonds guaranteed by Dominion and provincial governments, the proceeds of which will be used to reimburse the Grand Trunk Railway Company for amounts advanced.

RITZ-CARLTON HOTEL'S FINANCES.

Monetary Times Office,
Montreal, June 30th.

About a year ago the Ritz Carlton Hotel, which was backed by some of the big financial interests in the city of Montreal, opened its doors and began doing business in its splendid new building on Sherbrooke Street. The opening of the hotel was something of a social affair. The operating expenses, however, were high, the promoters being determined to spare no expense to make the hotel a strictly first-class institution. Unfortunately, the subsequent period proved an unfavorable one from an hotel standpoint. Even the older established institutions, which were operated on a less elaborate scale, and which appealed more to the purse of the average traveller, had difficulty in making ends meet, and the Ritz Carlton had to go through a partial refinancing. The weekly loss continued to run into large figures. The result was that the company was unable to meet its bond interest some weeks ago when it fell due and something of re-organization has again become necessary. During the present week it has even been reported on the street that the hotel would close down entirely. A director of the Ritz Carlton makes the following statement:—

"There have been a great many rumors on the street regarding the future of the Ritz, the majority of which are unfounded. The directors have been discussing the situation, and although nothing of a definite character has developed, we may be able to make a statement within a few days. The only thing I can say at present is that the sky has brightened within the past day or two.

"No meeting of the bondholders has been called and it is not likely that they will be brought together until the directors have a proposition to lay before them. I am of the opinion, personally, that nothing would be gained by the bondholders taking over the hotel and operating it. From a number of sources have come forecasts of the future of the Ritz. The latest suggestion is that it has to be changed into a high-class apartment house. This was considered some time ago, but it is not thought that the plan would be feasible. It is probable that the interests of the bondholders would be best considered by continuing to operate the Ritz as a hotel."

COMPANIES REGISTERED.

The following companies have been registered to do business in Alberta:—

Great Western Exploration Company, Limited, of Toronto; the Whitlock Lumber Company, Limited, of Alsask, Sask.; John Stuart and Company, Limited, of Manchester, England.

The following companies have been licensed to do business in British Columbia:—

Texada Development Company of Seattle, Wash.; Tiffany Studios of New York, N.Y.; Archer and Schanz Company, of Portland, Oregon; Flathead Petroleum Company, of Spokane, Wash.; the American Ever Ready Company, of San Francisco, Cal.; Guildford Island Lumber Company, of Wilmington, Delaware.

COMPANIES LICENSED.

The following companies have been licensed to do business in British Columbia:—

Robin, Jones and Whitman, Limited, of Halifax, N.S.; the Radium Natural Springs Syndicate, Limited, of London, England; Watson, Campbell and Smith, Limited, of Calgary; Myott, Son and Company (Toronto), Limited, of Toronto.

The following companies have been licensed to do business in Ontario:—

The Fur Farmers' Bureau and Exchange, Limited, of Prince Edward Island, capital, $25,000; Garden City Feeder Company, Limited (Dominion charter), capital, $40,000.

◆

A list of varied eastern municipal and western debenture offerings has been issued by the Canada Bond Corporation, Toronto.

JUNE FIRE LOSSES

Canada's Fire Waste Shows Reduction for First Six Months

[illegible] *Monetary Times'* estimate of Canada's fire loss during June amounted to $1,267,416, compared with May loss of $1,539,502 and $3,069,446 for the corresponding period of last year. The following is the estimate for the June losses:

Fires exceeding $10,000	$947,000
Small fires	155,101
Estimate for unreported fires	165,315
	$1,267,416

The fire waste in each province for the first six months of 1913 and 1914 has been estimated by *The Monetary Times* as follows:—

	1914.	1913.
Ontario	$5,4[illegible],082	$3,62[illegible],26[illegible]
Quebec	2,846,339	1,932,066
British Columbia	1,047,014	565,518
New Brunswick	974,437	869,030
Alberta	915,887	2,384,853
Manitoba	527,440	1,799,679
Saskatchewan	481,754	1,405,225
Nova Scotia	337,282	1,141,209
Prince Edward Island	20,525	375,117
	$12,579,768	$14,325,463

The following are the monthly totals of the losses by fire for 1914, compared with the three previous years' losses:—

	1911.	1912.	1913.	1914.
January	$2,250,550	$3,002,650	$3,913,385	$2,796,312
February	941,945	1,649,155	2,037,380	2,920,740
March	852,380	2,201,414	1,710,756	2,139,552
April	1,517,900	1,355,055	1,470,022	1,916,238
May	2,564,500	2,251,815	2,123,868	1,539,502
June	1,151,150	4,220,412	3,069,446	1,267,416
July	5,854,300	1,741,371	2,570,008	....
August	920,000	1,164,760	3,034,775	....
September	1,122,550	881,040	1,468,324	....
October	588,750	1,416,218	1,383,572	....
November	1,506,500	1,184,010	2,200,486	....
December	2,890,150	1,790,905	1,354,30[illegible]	....
Totals	$21,459,575	$22,909,712	$26,346,618	$12,579,760

Details of the following large fires were received after the May record of *The Monetary Times* was compiled, making that month's loss $1,539,502:—

Wallaceburg, Ont.	May 26	Flax stocks	$10,000
Kensington, P.E.I.	May 27	Residence	20,000
St. Sylvestre de Lotbiniere, Que.	May 28	Church	50,000
Winnipeg, Man.	May 22	Business block	40,000
[illegible], Ont.	May 2[illegible]	Flour mill	25,000
[illegible], Ont.	May [illegible]	Lumber mill	10[illegible],000
[illegible], Ont.	May [illegible]	Saw mills	100,000
[illegible], Sask.	May [illegible]	Business block	15,000
North Vancouver, B.C.	May [illegible]	Mill	10,000
[illegible], Ont.	May 29	Business section	100,000

[illegible] estimated at $10,000 and [illegible]:—

[illegible], B.C.	June [illegible]	[illegible]	$[illegible]
[illegible], Ont.	June [illegible]	Sawmill	[illegible]
[illegible], Ont.	June [illegible]	[illegible] church	[illegible]
[illegible], B.C.	June [illegible]	[illegible]	[illegible]
[illegible]	June [illegible]	[illegible]	[illegible]
[illegible]	June [illegible]	[illegible]	10,000
[illegible], Ont.	June [illegible]	Business section	[illegible]
[illegible], B.C.	June [illegible]	Business block	[illegible]
[illegible], Ont.	June [illegible]	Sawmill	[illegible]
[illegible]	June [illegible]	[illegible]	[illegible]
[illegible], Ont.	June 12	[illegible]	[illegible]
[illegible]	June [illegible]	Lumber yard	[illegible]
[illegible]	June [illegible]	[illegible] factory	[illegible]
[illegible], Alta.	June 19	Business section ..	40,000
Sussex, N.B.	June 18	Mr. G. W. Fowler's barns	20,000
Grimsby, Ont.	June 17	Lumber factory	15,000
Beauport, Que.	June 26	Residence, etc. ..	20,000
Brockville, Ont.	June 24	Woodworking factory.	20,000
Revelstoke, B.C.	June 25	Business section ..	40,000
Vancouver, B.C.	June 19	Factory	21,000
Windsor, Ont.	June 25	Curling rink, etc. ..	70,000

There were burned 3,600 bushels of wheat, 10 tons hay, 4 cows, 3 calves, 5 pigs, 70 hens, 5 horses, 4 wagons.

During June, 12 lost their lives through fire.

The following table compiled by *The Monetary Times* shows deaths caused by fire during the last six years:—

	1909.	1910.	1911.	1912.	1913.	1914.
January	16	27	27	27	14	26
February	8	15	12	11	21	18
March	16	20	18	24	22	27
April	18	37	20	15	11	22
May	21	15	28	18	33	8
June	16	52	13	6	18	12
July	4	15	110	9	9	..
August	17	11	22	16	29	..
September ..	10	10	13	6	27	..
October	26	16	17	21	15	..
November ..	34	19	20	22	24	..
December ..	33	19	17	28	13	..
Totals ..	219	256	317	203	236	113

The fires at which fatalities occurred were:—

May 28—St. Thomas, Ont..	Clothing set alight	1
June 2—Aneroid, Sask. ...	Burning building	1
June 2—Three Rivers, Que.	Burning building	2
June 5—Fort George, B.C.	Burning building	2
June 5—South Porcupine .	Burning building	1
June 7—Solsgirth, Man. .	Burning building	1
June 10—Brandon, Man. ..	Playing with matches ...	1
June 19—Puslinch Township, Ont.	Set clothing alight	1
June 20—Montreal, Que. ..	Lighting fire with gasoline	1
June 24—Toronto, Ont. ...	Playing with matches ...	1
		12

Of the presumed causes, many returns were given as unknown, others were:—Defective insulation in motor, 1; careless workmen, 1; children and matches, 2; gas jet and curtains, 1; backfiring engine, 1; sparks, 4; spontaneous combustion, 3; fire in yard, 1; overheated heater, 1; incendiary, 3; cigar stub, 1; hot ashes, 1; defective wiring, 2; oil stove explosion, 1; heap of sawdust, 1; lamp explosion, 3; caught from adjoining house, 2; overheated chimney, 2; bush fires, 1; gasoline tank exploded, 1; tramp, 1; lightning, 1.

The structures damaged and destroyed were:—Rinks, 2; blacksmith's shops, 2; store and dwelling, 2; automobile, 1; residences, 47; sheds, 13; boats, 2; stables, 8; barns, 4; warehouses, 4; wire fence works, 1; business sections, 30; hotels, 4; school, 1; stores, 20; slaughter house, 1; mills, 3; churches, 2; lumber yards, 4; wharf, 1; elevator, 1; factories, 5; forest fires, 1; town hall, 1.

COMPANIES INCREASING CAPITAL.

The following companies in Alberta have increased their capital stock:—

Great West Oil Lands, Limited, from $250,000 to $500,000. Sentinel Oil Company, Limited, from $150,000 to $500,000.

The following companies with Dominion charters have increased their capital stock:—

Bathurst Lumber Company, Limited, from $1,000,000 to $5,000,000. MacArthur, Perks and Company, Limited, from $500,000 to $1,500,000.

The following company in Ontario has increased its capital stock:—

American Road Machine Company of Canada, Limited, from $[illegible] to $500,000.

The following company in Ontario has decreased its capital stock:—

Industrial Buildings, Limited, from $400,000 to $200,000.

FIVE SOURCES OF WEALTH

Usually the sources of wealth are given as four—the fisheries, the mines, the forests and agriculture. Professor A. E. Chamberlain, the development commissioner of the Great Northern Railway, of America, while not minimizing the importance of these four natural sources of wealth, told the Ontario Corn Growers' Association at one time that there was a fifth great source of wealth, human skill. His charge that it had been shamefully neglected in all Anglo-Saxon speaking countries, is not easily denied.

Professor Chamberlain gave a striking illustration of the effect of human skill upon wealth by telling how he and his father used to go to the woods in the morning, fell a couple of splendid trees, and during the day chop them into cord wood. They would take another day with a team and haul the wood to the market, and would probably get for the two trees, and their labor, $5 or $6 or $7. The trees were gone forever. The greater part of the great natural resources given us in the form of the forests has been or is being disposed of in this or a still more wasteful manner. A little later there came the saw mill into the community. They then felled the same trees and cut them into logs. They took them to the mill, which was simply an evidence of the development and exercise of a little higher skill, and there the same two trees were converted into lumber of a value of $15, $20, or $25. Nothing whatever had been added to what nature gave except a little higher developed skill. By the development of that skill the same natural resources afforded employment to a man twice or three times as long as when the trees were disposed of by the more crude method, and the produce was of three or four times the value.

A little later there came the furniture factory. It took the same trees and by the addition of a still higher development, human skill afforded employment to a human being for three or four months, and gave them a value of several hundred dollars. If the German cabinet maker might have had one of the same trees he would have worked on it for a number of years, and given it a value of some thousands of dollars. No heavier draft on the resources nature gave us, but simply a higher development of human skill. If the Italian wood carver might have had one of the trees, he and his family would have worked on it for nearly a generation, and would have given it a value of many thousands of dollars.

In Canada, not only is this human skill less developed than in so many other countries, but there are also a fairly large proportion of the population who apparently think it unnecessary to cultivate skill. This is unfortunate. Easy money never makes a rich nation. One finds the greatest average wealth usually where there is the greatest average and individual skill. On the Island of Jersey, for instance, one cow is maintained for each acre of ground and that cow produces from 400 to 500 pounds of butter. In Ontario, 3 to 5 acres maintain a cow a year on the ordinary farm and they produce an average of about 175 pounds of butter each. Skill accounts for the difference.

Denmark, which is a little larger than the three counties of Essex, Kent and Lambton, Ontario, supports a population of 1,250,000 people, and exported in one year $101,000,000 worth of farm products—pork, dairy and poultry products. They did so because of a higher development of the skill of the Danish people. They did it first by producing more per acre. Then they took the larger quantity of the raw product and manufactured it into a better finished product, or we might say, marketed it in a better and more desirable condition. One may ship to London and Liverpool the same quantity of pork, dairy and poultry products the Danish people export, sell them the same day and on the same market, and the Danish people will get for theirs approximately $8,000,000 more than the people with less skill will get for theirs.

The country lacking skill has to pay for that disadvantage, and the money goes to those countries whose citizens have the skill. Canada has the four chief natural sources of wealth to a remarkable degree. The fifth source of wealth, human skill, has yet to be considerably developed. When the four are combined with the one in this Dominion, some remarkable achievements should be accomplished.

CANADA AND THE PANAMA CANAL

Canada appears to be in no hurry to prepare itself for the anticipated changes in commercial conditions as the result of the opening of the Panama Canal next year. If the benefits likely to accrue from the new waterway are as great as anticipated by some, Canada will have lost ground. If the canal does not change the commercial operations extensively, as anticipated, Canada will not have wasted time. Apparently Canadian business has been taking its cue from Canadian railroad men. None of the executives of our three leading railway systems are worrying about the opening of the Panama Canal and its effect upon railroad rates and railroad hauls. Indeed, early this year assurances that the Canadian Pacific Railway has no intention of attempting to evade the provision of the Panama Canal Act barring railroad-owned ships [illegible] Panama Canal, reached Washington through [illegible]. With this assurance came a further [illegible] the Canadian Pacific would not send its [illegible] the canal, even if there were no question [illegible] right to do so, as the company's officials could [illegible] advantage to be gained by changing their present [illegible] across the Atlantic and Pacific.

This information was received with particular interest in Washington because Senator Bristow and others in Congress charged that agitation in favor of repealing the section of the canal act giving free tolls to United States vessels was in the interest of the great Canadian railway and steamship corporation. It was suggested in the debates, however, that the transcontinental railroads opposed the free tolls provision, not so much on account of the advantage United States ships would be given over those of other nations, as because of the low rates at which ships passing through the canal free of tolls would be able to carry freight in competition with the railways.

Pacific coast advices report active investment in real estate, general revival of the lumber industry, and improvement in waterfront facilities on a much enlarged scale at such ports as San Francisco, San Diego, Seattle, and Portland, in expectation of benefit from the opening of the Panama Canal. The four cities mentioned have a programme of improvement, the means for which are provided by bond issues amounting to more than $22,000,000.

Writing in *The Monetary Times Annual* of 1914, Hon. John Barrett, the director of the Pan-American Union, stated that Canada has a vital interest in the successful completion of the canal, a patent fact to all who know anything of her agricultural and industrial development and resources. "To eastern Canada," he added, "the whole west coast of two continents will be made accessible, and a shorter route to Australia and the Orient provided. To western Canada the Atlantic coast of the Americas and Europe will be brought closer by 8,000 miles in distance and from 30 to 40 days in time for freight steamers. That this means much to the Canada of to-day goes without saying. How much more it will mean to the Canada of the future may only be guessed at."

Continuing, Mr. Barrett said: "The Pacific coast countries of Latin America, even in their present limited state of development and with a comparatively sparse population, last year conducted a foreign commerce of about $500,000,000, much of which, by virtue of necessity, was carried through the Straits of Magellan and around the Horn. The door of opportunity being opened by the completion of the Panama Canal, what will this commerce amount to seven years hence? The Great Circle Route from Liverpool to Panama will be lengthened less than a [illegible] steaming [illegible] from the mother country could touch at Halifax. In all probability this will be made a regular port of call for nearly all British lines to the west coast of the Americas. Surely will eastern Canada [illegible] waterway."

[illegible]

[illegible] to the Canal. The idea apparently is to await the actual effects rather than to speculate upon the possible effects of the waterway.

SHORT-TERM LOANS

While Canada has been a somewhat heavy borrower in London this year to date, two phases of the situation will appeal to the conservative investor. These are that some of the loans have been made to retire short-term loans and that practically all of the borrowing has been absolutely necessary. It is good to know that short-term financing by the Dominion this year has not been so extensive as was the case in 1913. The aggregate of short-term loans outstanding at one time last year was surprisingly large, but the total has been considerably reduced and new loans of such a character have been few.

There are points for and against the short-term loan. This form of financing, however, presents many dangers and problems and Canada, it is hoped, will not patronize "short terms" to any great extent.

Canadian financiers have witnessed striking examples of the penalties which have to be paid for short-term loans. There was, for instance, last year the issue of $3,000,000 of three-year notes of the British Canadian Lumber Corporation, Limited. This was made in London at 95 and the company will have to pay 8 per cent. interest per annum on the face value of the notes, which is 100. In addition, it agrees to redeem the notes at 107. In short, for every $95 the company obtains, it will pay $21 in interest and $107 in principal. That is a cost of $36 on every $95 borrowed for three years, which is nearly 12½ per cent. Again, the issue of £300,000 2 and 3-year notes in London at 96 by the Spanish River Pulp and Paper Mills gave purchasers what was described in a cable message as "the enormous yield of £8 7s. 10d., allowing for forfeit on redemption."

It is only in recent years that the Dominion commenced to issue treasury notes on the London market. Previously, the practice has been to offer the bills by tender on the invitation of the Bank of England, but Canada broke new ground and placed its issues by private negotiation. There is, therefore, no published record either of the amounts offered or of the results obtained. A warning in respect to treasury bills has been given to Canada by Mr. Edward A. Hoare, of the Bank of British North America. We may repeat, as opportune, what he has already said in these columns:—

"Nothing speeds the flight of time like the maturity of a bill and to float this form of security in anticipation of providing the necessary funds for payment by the issue of stocks and bonds must always be dangerous. That Canada should have adopted this method of finance at a time when the conditions of the money market proved to be so unfavorable was in one sense unfortunate, but it may well be that the experience gained may prove to be valuable, for it has been demonstrated that a method of finance which is convenient and inexpensive for the British government, the government of India, the Dominion of Canada, and a few of the principal cities of the United Kingdom, may become both costly and dangerous when adopted by others who, excellent as their securities undoubtedly are, have not yet attained to the front rank in international credit."

It is a mistake for investors and financiers to think that the short-term loan is the prize solution of monetary problems.

JUNE MUNICIPAL BOND SALES

The municipal bond sales in Canada for June, as compiled by *The Monetary Times*, amounted to $4,[illegible], compared with $5,665,755 for May and $2,435,726 for the corresponding period of last year.

The following table, compiled from the records of *The Monetary Times*, shows the sales in the Dominion during the first six months of 1914, compared with the three previous years:—

	1911.	1912.	1913.	1914.
January	$ 420,337	$2,133,531	$1,[illegible]37,500	$[illegible]
February	1,037,287	2,596,378	1,038,80[illegible]	5,0[illegible]
March	6,271,925	1,926,716	3[illegible]5,402	5,[illegible],770
April	3,910,288	927,10[illegible]	3,093,857	2,70[illegible],153
May	3,946,047	1,928,748	88[illegible]	5,665,755
June	3,983,670	1,60[illegible],344	2,435,726	4,209,204
July	1,594,566	1,067,476	1,501,924	......
August	1,493,507	1,049,547	52[illegible]	......
September	1,748,778	1,998,605	1,6[illegible]3,260	......
October	1,730,075	1,060,507	3,452,282	......
November	2,915,765	1,396,664	2,481,062	......
December	1,243,593	491,59[illegible]	1,113,400	......
Total	$30,295,838	$19,767,256	$20,550,2[illegible]0	$25,[illegible]5[illegible]51

The following are the particulars of the June sales in Canada by provinces:—

Ontario	$1,934,216
Quebec	1,669,100
Manitoba	27,000
Alberta	423,550
British Columbia	90,000
Saskatchewan	75,428
New Brunswick	80,000
	$4,209,204

	$90,000		

New Brunswick.

St. John	$ 80,000	.	.

◆

Mr. J. Stewart Tupper, K.C., has been appointed to the seat on the board of the Standard Trusts Company, rendered vacant by the death of the late Sir William Whyte.

Mr. J. Gardner Thompson has been elected president of the Canadian Fire Underwriters' Association for the ensuing year. Mr. F. F. Garrow, vice-president for Ontario, and Mr. J. D. Borthwick, vice-president for Quebec.

The Maryland Casualty Company is changing its method of handling its business in Canada. The chief agency at Toronto, to which all Canadian agents have been reporting, will shortly be discontinued, and all general agents will report direct to Baltimore. This will give the representatives and the patrons of the company as the result of immediate touch with the home office, prompter and better service.

Due to the very nature of public service, the community served is generally regarded as a quasi-partner in the enterprise, and the utility company is under obligation, in view of franchise rights, to render good service at fair rates. In this way public service companies now stand in the unique position of operating under the regulatory powers of commissions and bearing obligations to the public as well as to their security holders, states J. G. White, Corporation New York, in a recent booklet. Harmonious working relations with the municipal officials in the community served and the support of public opinion add a security to invested capital which is not enjoyed by any ordinary commercial enterprise. This added security can be obtained only by careful guidance of the utility's affairs, and by exercise of tact and good judgment in dealing with the public and its representatives.

LIFE INSURANCE IN CANADA

Increased By One Hundred Million Dollars—Canadian Companies Secured Most Business

LIFE insurance in Canada, according to recently issued figures, increased approximately $100,000,000, British and Colonial figures not being complete. The total increase for Canadian companies was $44,000,000; United States companies $50,500,000; British and Colonial companies, $5,500,000. Colonial is a new addition to the title of this division of companies, being necessitated by the inclusion of Mutual Life and Citizens' Company of Australia. There was an increase of 515,091 new policies taken up last year, as compared with 451,421, an increase of 63,670. According to the government figures appearing on the next page of this issue, it will be seen that Canadian companies secured $24,783,718; British and Colonial companies, $1,837,990; United States companies, $11,969,392, of the total premiums, which were $38,591,100. In the matter of new and taken up policies, United States led in 1913, as they did in 1912, their number being 408,676. Canadian companies were responsible for 101,967 and British and Colonial companies 4,448, but in amount Canadian companies stand first, their total being $131,403,582. United States companies were second with $93,164,269, while British and Colonial companies issued policies valued at $6,050,605. United States companies at the end of 1913 had 1,055,088 policies with a net amount in force of $359,775,330, and Canadian companies had 553,373 policies, the net amount of which was $750,637,512. The data for British and Colonial companies not being complete, the net amount in force, it is assumed, will be around $60,000,000. Eight Canadian and four United States companies took premiums exceeding $1,000,000 during 1913, while the highest British amount was $866,825. The total assets of twenty-seven Canadian life companies last year amounted to $233,302,925, as compared with $212,185,939. The Alberta-Saskatchewan Life is a new comer in the list, while the figures relative to Union Life no longer appear.

The Canadian companies' assets compared for two years are as follows:—

Nature of assets.	1913.	1912.
Real estate	$10,061,534	$ 8,683,194
Loans on real estate	87,215,995	75,322,298
Loans on collaterals	1,477,725	3,220,832
Cash loans and premium obligations on policies in force	30,876,072	25,870,862
Bonds and debentures	77,522,855	70,132,366
Stocks	11,691,607	16,307,053
Cash on hand, in banks, etc.	3,268,039	2,962,320
Interest and rents due and accrued	4,839,115	4,040,529
Outstanding and deferred premiums	6,004,851	5,325,670
Other assets	434,288	302,810

The total payments to policyholders amounted to $6,825,633, made up as follows: Death claims, $3,324,406; matured endowments, $1,025,469; paid to annuitants, $58,944; paid for surrendered policies, $1,309,986; dividends paid to policyholders, $1,106,827.

The following table shows the growth in the net amount of insurance in force in Canada since 1875:—

1875	$ 85,900,264
1881	103,290,932
1888	211,761,583
1894	308,161,436
1899	404,170,673
1902	508,812,305
1905	630,334,240
1908	719,516,014
1910	856,113,059
1911	950,220,721
1912	1,070,308,669

while the premium income, which in 1875, was less than $3,000,000, has grown in 1913 to $38,591,100.

In 1912 bonds and debentures were the second item in the list of assets. This was so again last year. A noteworthy decrease took place in the companies' holdings of stocks. Among the assets of some companies are included bonus stocks acquired in connection with bond purchases. In some instances the value has been assigned by the company to these stocks (such value being then included in the figures); in the other instances the stocks are not yet deemed of appreciable or certain value.

Superintendent Fitzgerald, of the Insurance Department, states relative to the above figures, that he has obtained three independent quotations of the market values of all bonds, debentures and stock held by all insurance companies licensed to the department, but complete quotations were not obtained in time for insertion in the following figures. The Department's full report will contain the averages of these quotations, which have been taken as the true market value.

The following figures are a summary of last year's insurance business:—

	Premiums for Year	Number of Policies New and Taken up	Amount of Policies New and Taken up	Number of Policies in Force at Date	Net Amount in Force	Number of Policies become Claims	Net Amount of Policies become Claims.	Claims Paid (including Matured Endowments.)	Unsettled Claims.

Notice is hereby given that a Dividend at the rate of Twelve Per Cent. (12%) per annum upon the paid-up Capital Stock of this institution has been declared for the three months ending 31st July, 1914, and that the same will be payable at the Head Office and Branches on and after Saturday, the 1st day of August next. The Transfer Books will be closed from the 17th to the 31st July, 1914, both days inclusive.

By order of the Board.

D. R. WILKIE,
General Manager.

Toronto, 24th June, 1914.

BUILDING CONSTRUCTION MATERIALS

Statistics of Canada's Output of Stone, Slate, Sand and Gravel

The total value of the production of stone in Canada in 1912, according to returns received, by the department of mines, was $4,720,171, as compared with a value of $4,328,757 in 1911, showing an increased production of $391,414, or 9.2 per cent.

The number of active firms reporting in 1912 was 192, the total number of men employed 5,710, and the total wages paid $2,918,116. In 1911 the number of active firms reporting was 191, the number of men employed 5,437, and wages paid $2,500,005.

Of the total value of the 1912 production, limestone contributed $2,762,936, or 58.5 per cent.; granite, $1,373,119, or nearly 29 per cent.; sandstone, $329,352, or 7.0 per cent.; and marble, $260,764, or 5.5 per cent.

Stone was used for building purposes to the value of $1,452,157, or 30.7 per cent. of the total, monumental and ornamental stone, a value of $190,359, or 4 per cent.; curb, paving, and flagstone, $268,390, or 5.7 per cent.; rubble, $353,871, or 7.5 per cent.; crushed stone, $1,987,073, or 42.1 per cent.; and furnace flux, 904,528 tons, valued at $474,321, or 10.0 per cent.

Output by Provinces.

Quebec shows the largest output, having a value of $1,957,703, or 41.4 per cent. of the total, being made up of limestone to the value of $1,187,751, granite valued at $522,114, marble, $247,838. Ontario takes second place with a production of $1,109,164, or 23.5 per cent. of the total, of which limestone is credited with $862,052; granite, $174,946; sandstone, $59,240, and marble, $12,926. British Columbia ranked third in order of importance, with a total of $779,611, including: granite, $624,178; sandstone, $99,816; limestone, $55,617. The production in Manitoba was valued at $383,095, made up of limestone, $381,572, and granite, $1,523. The Nova Scotia production was valued at $324,630, comprising: limestone, $275,944; granite, $28,041, and sandstone, $20,645. The Alberta production was reported as $81,391, all sandstone. New Brunswick is credited with $90,577, made up chiefly of sandstone and granite.

The exports of stone from Canada in 1912 were valued at $33,242, as against $28,335 in 1911, and $27,571 in 1910. The principal item in the export of stone during the past three years, has been building stone unwrought, of which the exports in 1912 were 108,516 tons, valued at $28,795. The exports of dressed stone in 1912, including both ornamental and building stone, were valued at $2,621 only.

The total value of imports during 1912 was $1,467,143 as compared with $1,140,846 in 1911.

Slate, Sand and Gravel.

Slate production in 1912 is reported as 1,894 squares, valued at $8,938.

No exports of slate have been reported since 1901.

The imports of slate have ranged in value during the past seven years from $100,000 to $200,000 per annum. The total value of imports during the calendar year 1912 was $200,643, comprising: roofing slate, $88,911; school writing slate, $39,858; slate pencils, $6,978; other slates and manufactures of, $65,896.

For the year 1912 the department of mines made a beginning in the collection of statistics, of the production of building sand and gravel, although the record is far from being complete, owing to many correspondents neglected to furnish the information required, etc. The partial returns received showed a production in Quebec valued at $243,126, Ontario, $363,668; Manitoba, $101,653; Saskatchewan, $255,453; Alberta, $148,704; British Columbia, $385,946. The record for the Maritime Provinces was particularly meagre, returns being received only to the extent of $13,549, making a total value of $1,512,099.

During 1912 there was exported from Canada 660,090 tons of sand and gravel, valued at $459,952; while during the same year there were imported 553,721 tons, valued at $445,781.

CAPITAL AND LABOR ARE SERVANTS

Neither Can Obtain More From Society Than Society is Able to Pay

"We are all anxious to have efficiency in business, but when efficiency in business brings great success, pecuniary or otherwise, a spirit is shown by a part of our people and by a part of our law-makers to create conditions that militate against that very efficiency," said Mr. Howard Elliott, chairman of the board of the New York, New Haven and Hartford Railroad, at the Harvard University Club, when speaking on "Capital and Labor."

"That the large business enterprises should be regulated will not be denied by any one because they are and must be subservient to the interest of society as a whole, but to insist that various large business enterprises should be broken up because of unreasoning worship of the word 'competition' means waste and a limiting of efficiency.

"The attention of the people during the last 20 years, and, particularly, at the present time, has been directed toward that partner in business which is so essential to its success, namely, capital.

Honesty, the Best Policy.

"Capital has made some mistakes, as is perfectly natural, but it is gradually curing those mistakes through experience and self-interest and recognizing what the world and the business men who reflect the world realize—namely, that 'honesty is the best policy.'

"The other partner in business, labor, is now beginning to receive some attention from the public, the press and the law making bodies, because it is just as essential that labor be fair to society as that capital shall be fair to society. Every man, of course, desires every other man to get just as much for his efforts as he possibly can, having due regard to the rights of all. Society, however, must say to labor, sooner or later, just as it has said to capital: 'You cannot use any concentrated power in your hands to hurt society as a whole, and when you do use it unfairly, society will, in some way, create conditions that will take that power away from you.'

A Problem of the Times.

"The great mass of the men who are members of labor unions are high minded, loyal men who want to do their duty but, sometimes they may have leaders whose ambitions warp their judgment and, as an organization, they use their power to an extreme, just as men who represent combinations of capital and who, as a class, are high-minded and honest in every way have, at times, had over-ambitious leaders who have used their power unwisely and gone too far.

"So, one of the great problems of our day is to treat capital in such a way that it will be the servant of all of the people, but obtain a just and attractive reward for the work it does, and also to treat labor in such a way that it will be the servant of the people, obtaining as its reward good wages and improved living conditions year by year, but also to make both capital and labor realize they cannot obtain from society more than society is able to pay."

It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

TRAFFIC RETURNS OF SUEZ CANAL

Stock Amounting to 3,000,000 Francs Was Issued—Development of Trade Will Bring More Shipping

The report of the Suez Canal states that a reduction of nearly 6,000,000 francs has taken place in the receipts as a result of the lowering of the rate of tolls by 50 centimes per ton and on account of a slight falling off in traffic. The directors, however, point out that a considerable improvement has taken place in the latter part of the year, and when allowance is made for the reduction in the rate of tolls the trade for that period surpasses that for the corresponding period of 1912. In 1912 several favorable factors influenced trade, and when consideration is given to those the results for 1913 cannot be regarded as other than satisfactory. Trade has preserved on the whole sustained activity. The receipts for the year were 129,925,949 francs, a falling off of 9,996,690 francs compared with 1912. Of this reduction 9,745,899 francs is attributable to transit and the remainder is accounted for by general receipts. The total expenditure amounted to 45,981,079 francs. This sum includes, as in 1912, an item of 3,000,000 francs placed to the amortization fund. It has not been necessary, as in the preceding year, to renew the payment of a similar sum towards the insurance fund and unforeseen contingencies. On the whole the expenses of 1913 are less by 1,744,544 francs than those of 1912, in spite of an important increase in the cost of maintenance consequent upon the activity with which dredging operations have been carried on. Receipts show an excess over expenditure of 84,422,597 francs, to which has to be added 3,500,000 francs drawn from the extraordinary reserve, making the available balance for distribution among the shareholders 87,922,597 francs.

Twenty Million Tons.

Out of this sum the directors recommend the distribution of 87,862,535 francs, leaving to be carried forward the sum of 60,062 francs. This payment gives 155 francs to each share, and, along with interest, permits a net dividend of 165 francs. As a result of the withdrawal from the extraordinary reserve to augment the dividend, this fund now stands at 6,500,000 francs. In the course of the year stock of the Third Series was issued to the extent of 3,132,963 francs, which brings the amount issued in respect of the authorized loan of 150,000,000 francs up to 9,500,197 francs. Throughout the year 5,085 ships, representing a net tonnage of 20,033,884 tons, have passed through the canal, which shows a falling off of 288 ships and 241,236 tons compared with 1912. The reduction is due to a marked slackening of traffic to the East. The increase in the size of the vessels using the canal was an important feature. This tendency has been marked for some years, but the increase in 1913 has been above the normal. The average tonnage rose from 3,774 tons in 1912 to 3,940 tons in 1913. Throughout the past 12 years the number of vessels using the canal of 4,000 tons and over formed 22 per cent. of the total, while last year vessels of these dimensions formed over 44 per cent. of the total. Over a period of 10 years vessels of 6,000 tons and over formed only 1 per cent. of the total, while in 1913 vessels of this size amounted to 5 per cent. In 1913, as in preceding years, the conditions of transit have continued excellent. The average duration of the voyage was reduced in 1912 by 35 minutes, and this reduction has been maintained and the time now occupied in the passage is 16 hours 19 minutes.

Decrease will be Temporary.

The water plants have worked under perfect conditions, and the sales of water to the public continue to increase. The channel at Port Said, as well as the canal, has been maintained in a good navigable condition by the construction of 117,000 cubic metres of earthwork and 6,840,700 cubic metres of dredging. The channel at Port Said has been further protected by the extension of the west jetty, and has not at any time during the year been affected by bad weather. Also, the work of deepening and widening the canal was pushed on sufficiently. The work of dredging will be carried on until there is a uniform depth of 12 metres. At the beginning of 1914 the depth of water was nowhere less than 10 metres. The importance of this, particularly to warships, which are growing in size even more rapidly than merchantmen, cannot be ignored. Widening is also taking place, and

At present there is a minimum width of 45 metres over a distance of [illegible] kilometres. Over [illegible] kilometres the width is 100 metres. Although the canal has not benefited from so many favorable factors as influenced trade in 1912, but, on the contrary, has been marked by a general depression in trade, the traffic has only been inferior by about 1 per cent. to that of 1912, and has largely surpassed that of all preceding years. The diminution of traffic evidenced is accounted for by recognized causes, which are temporary, and the development of trade with India, China, Japan and Australasia is assured, and local enterprise at Port Said, Suez and along the coasts of the Red Sea is calculated to bring large and valuable traffic to the canal.

Franc—19.3 cents.

◆

ONTARIO'S METALLIFEROUS RETURNS

The output of metalliferous mines and works of Ontario for the first three months of 1914 had a total "spot" value of $9,484,299 as compared with $9,469,938 for the corresponding period of 1913, according to returns received by the Bureau of Mines, Toronto, under the Mining Act. That the increase was not greater is due to the lessened production of silver from the mines of Cobalt, which fell off by 680,198 ounces. There were also small decreases in iron ore and pig iron, but these were more than offset by a larger output of gold, nickel, copper and cobalt and nickel oxides. Details are given below. The ton is the statutory ton of 2,000 pounds.

The production of non-metallic substances, though steadily growing, amounts in value to less than one-quarter of the whole aggregate output of the mineral industry, and statistics of such materials are collected for the calendar year only.

Product.	Quality.	Value.	Value first three months 1913.	Increase or decrease.
		$	$	$

WORLD'S CAPITAL ISSUES

Some interesting figures regarding the total capital issues at the various monetary centres in the ten years, 1903-1912, have been issued by Le Matin, Paris. The total comes to 175 milliard francs, the last five years accounting for nearly 10[illegible] milliards. Of the total, government, municipal and similar loans accounted for 64¼ milliard francs; capital issues by banking institutions amounted to 21⅓ milliard francs, and those by railway and industrial undertakings to [illegible] milliard francs. The total is geographically analysed as follows:—

(000,000's omitted.)

	State and Municipal Loans, Francs.	Bank Loans, Francs.	Industrial and Railway Loans, Francs.
United States	2,880	200	36,378
Germany	12,[illegible]4	7,453	9,019
England	8,645	2,282	15,166
Russia	[illegible]85	1,059	2,746
France	2,[illegible]	3,112	7,612
Austria-Hungary	2,850	886	368
Italy	6[illegible]8	342	175
Other countries	[illegible]12	6,044	18,363

PROBLEM OF TRADE BALANCE

It is How to Control and Direct Private Business of People, Their Expenditures, Investments and Borrowings

Some interesting light on the trade balance question was thrown by Mr. George E. Roberts, director of the mint at Washington, in an address to the Western Economic Association. All phases of this subject have long been under observation abroad, and particularly in London, which has been for many years the most important international money market on the globe. The Bank of England, as the custodian of the gold reserve of that market, has had a much greater experience with this problem than any other institution. In the course of its long career it has had every kind of a situation presented, and perhaps made every kind of a mistake, but it has gained knowledge by its mistakes, and the whole world has profited by its experience. Certain definite principles relative to the control of credits, the management of crises and the maintenance of a gold reserve have been evolved and established so that the world has accepted them, and one by one all nations have provided them with the equipment to carry these principles into effect.

Mr. Hartley Withers, a capable English writer on the subject, in his latest book, published a little over a year ago, said that among the nations prominent in international trade and finance the only one that left its exchanges to its own devices was the United States, and he added that "the result of its neglect rouses astonishment rather than envy among other nations." And while we can hardly say with pride that at last the United States has decided to mend its ways, we may find great satisfaction in the fact that it has done so.

Commercial Countries on Gold Basis.

Practically all of the great commercial countries of the world are now on a gold basis, so that they have a common unit of value in the grain of gold. The standard coins of each have a fixed relation to those of all the rest and may be shipped from one country to another and converted into each other.

In the order of importance the first generally recognized principles is that each country should keep its domestic currency at par with the standard; that is, upon the international basis. Mr. Roberts said he was aware that even this statement must be qualified slightly, because the Bank of France, which is admittedly a well-managed institution, is even now exercising the privilege of paying its notes in silver coin or of charging a premium of $1 per $1,000 for gold. On the other hand, when this policy was considered by the German Commission appointed a few years ago to recommend changes in the German bank act, a commission of 25 gentlemen, all economists, bankers or men of affairs, every member without exception expressed the opinion that in view of the position which Germany was assuming in international trade that country could not afford to adopt a policy of charging a premium upon gold.

Gold in Germany and France.

Perhaps it ought to be added in this connection that notwithstanding this unanimous judgment of German savants, the opinion prevails in banking circles elsewhere that it is quite as difficult to get gold out of Germany as it is out of France. But this only illustrates that it is easier to have principles than it is to live up to them.

However, this is one of the methods by which a note-issuing institution may obstruct the exportation of gold, and some very good authorities have urged that it might be properly used in the United States to offset a forced or artificial effort to take gold from us. Mr. Roberts thinks that this is one of the instances where it is better to endure occasional imposition, if such it may be, than to retaliate by a questionable practice—a practice that would attach uncertainty to the standard itself. If the premium could be arbitrarily fixed at $1 on $1,000 at one time, why might it not be fixed at $5 per $1,000 at another time? The authority of the Bank of France is great, but the position of France is unique in some respects, and there are arguments for continuing a long-established custom there which would not apply to the inauguration of such a practice in the United States.

Moreover, it is doubtful whether such a policy would be effective with the United States, notwithstanding its considerable stock of silver. Four-fifths of all its bank reserves now consists of gold or paper calling for gold, and the other

[illegible], while indeed a legal tender, is in small bills. Under such conditions it is not likely that the bank will ever refuse to provide gold for its customers. It is now, and will be increasingly difficult to pay large sums without using gold or gold certificates.

The first consideration then for a note-issuing institution is that its currency shall always be convertible into gold on demand. This is its first and chief responsibility, and all other policies are secondary to it. Every diminution of its gold reserve, every sign at home or abroad which betokens demand upon that reserve, must be heeded, so that the liabilities and resources of the institution may be kept in due relations, and that all the agencies at its command may be set in motion in time to work out the desired results. And the chief reliance in this management of a gold reserve is the discount rate.

Operations of Discount Market.

Now, while the discount rate is used sometimes with almost magical effect, particularly in the London market, there is no magic or mystery about its operations. An adverse foreign balance, like any other debt, may be handled temporarily by means of loans, extensions or shifts of one kind or another, but the only way to get rid of it finally is to pay it; get mad, if you please, but pay it, either with commodities, securities or gold. It is just the old-fashioned remedy of holding your current purchases down below your income until the surplus wipes out your debts. The problem has been how to control and direct the private business affairs of all the people of the country, their expenditures, their investments and their borrowings, so as to turn an adverse foreign balance into a favorable one.

The discount rate, if it can be made generally effective upon credits, will do this. A high rate exerts a steady pressure for the liquidation of indebtedness. It tends to force exportable commodities upon the market at prices that permit their sale abroad, thus settling foreign indebtedness and reducing the demands for gold. In the same manner it starts a movement of securities to foreign purchasers. It causes merchants to cancel or withhold orders for foreign goods, and manufacturers to hold off on the purchase of materials. It checks new construction, and in every way influences people to live more within their own resources and sell off what they can spare, with the general result that they pay their debts both at home and abroad, and the balance of payments rapidly turns over from adverse to favorable.

◆

ASBESTOS PRODUCERS' BUSY YEAR

Activity in the production of asbestos in 1913 was confined to the districts of Black Lake, Thetford, and Danville in Quebec. None of the quarries formerly operated at East Broughton were worked, although small shipments were made by one firm from stock.

The output and shipments in 1913 exceeded those of all previous years, the increase in sales over 1912 being 22.75 per cent. The total output in 1913 was 132,564 tons as against 102,759 in 1912, an increase of 29,805 tons, or 29 per cent., according to the figures of the department of mines. The sales and shipments of asbestos fibre in 1913 were 136,951 tons, valued at $3,830,909, or an average of $27.97 per ton, as against sales in 1912 of $111,561 tons valued at $3,117,572, or an average of $27.95. Stock on hand, December 31st, 1913, was reported as 20,786 tons, as compared with stocks of 23,288 tons at the beginning of the year.

The number of men employed in the mines and mills was 2,051, and the amount paid in wages $1,687,957. The total quantity of asbestos rock sent to the mills is reported as 2,110,090 tons, which with a mill production of 127,539 tons shows an average estimated content of 6.04 per cent. of fibre in the rock.

A new mill is in course of construction at Danville.

The total sales of crude in 1913 were 5,660 tons, valued at $989,162, and of mill stock, 131,291 tons, valued at $2,841,747. There was a falling off in the amount of both crude and mill fibre in stock at the end of the year.

Exports of asbestos during the twelve months ending December 31, 1913, were 102,812 tons valued at $2,848,047 as against 88,068 tons valued at $2,349,353 exported in 1912. There was also an export of manufactures of asbestos in 1913 valued at $73,446.

FROM WHEATFIELD TO BREAKFAST-TABLE

Distributing and Marketing Business is Highly Competitive—Salesmen, Machinery, Elevators and Mills

The usual channel through which wheat passes from the farmer to the consumer is the grain elevator, the railroad, the grain jobber, or commission man, the flour mill, the flour jobber or wholesale grocer, and the grocer, states a bulletin of the United States government on wheat prices, etc. Two or more jobbers may at times handle the wheat or the flour.

Home baking is decreasing, and the percentage of flour passing through the bakery is rapidly increasing. Considerable wheat, especially that marketed early, goes into storage in terminal elevators in the big grain centres.

The farmer delivers his wheat to the operator of the country elevator, who tests, weighs and receives it. The elevator operator usually buys at about 3 cents per bushel under the price at which he can sell on track at the time. He, of course, buys lower if he can, but competition generally keeps him down to a margin of about 3 cents. A decline in the wheat market at the time of shipping may turn his apparent profit into loss, or on the other hand, an advance in the market may give him a much larger profit than he anticipated. Such data as could be gathered tend to confirm the general statement that elevator margins have been about the same during the time since 1906.

Wheat occasionally is sold by the country elevators directly to the mills, but the most of it passes through the hands of jobbers or commission men. Commission men receive 1 cent a bushel for handling wheat. Jobbers make what they can, but they figure on making about 1 cent per bushel. A fortunate purchase or sale or a change of the market may cause a good profit, while some adverse condition may make the transaction a losing one. Records of several jobbers show the average profit on wheat handled to be about 1 cent per bushel. Jobbers must compete with commission men, whose charge is almost uniformly 1 cent a bushel; hence the jobber can usually exceed this amount only through having a better knowledge of the grain and markets or by a greater shrewdness in buying and selling.

Miller and Jobber's Profits.

The miller's margin varies materially. His business must average a profit or of necessity he will discontinue it. To maintain his trade he must keep in operation even at a loss at times. The records of every mill furnishing information shows sales at good profits and also an occasional unloading of stock at cost or at a loss. The mills generally sell flour in bulk at the mill at less than the cost of the wheat required to make it, the cost of manufacture, the profit, and the loss on the flour being covered by the value of the by-product—feed.

The flour jobber's profit varies greatly. If he is a plunger he makes large profits, which he must alternate with smaller profits and occasional losses when the market goes against him. On a steady market his profits generally are from 8 to 10 per cent., or from 40 to 50 cents per barrel. Prices are no nearer uniform with the jobber than with the miller. Sales made the same day show differences in price.

The large bakers and some of the large grocers buy directly from the mill, thus saving some of the jobber's profits. But to the small baker and the small grocer the flour jobber is both a banker and a warehouseman. The small baker or grocer has not money enough to buy a car of flour; he has not storage room for it, and it might deteriorate on his hands before he could dispose of it. The jobber furnishes the money and storage room, and by quick handling in large quantities he can keep a fresh stock.

The mills protect the flour jobber in his prices to the extent of 10 or 15 cents per barrel; in other words, the mills sell to him 10 or 15 cents cheaper than to an ordinary baker or grocer or any occasional buyer. The greater his protection the more likely he is to push sales and furnish a market for the mill's output. As freight rates are so much cheaper on full car lots than on small lots, all shipments going any distance and many shipments going only short distances are sent out in car lots, and in order to get car lot rates, when less than a car of flour is wanted, mixed cars of flour and feed are often made up.

The retailer's profits on flour vary in amount; they may run large for a time and then by a change of market or a

period of comparison can be reduced to a low figure. The data gathered indicate that 15 to 25 cents is the usual gross profit, and 20 cents is about the average gross profit for a grocer on a quarter-barrel sack (forty-eight or forty-nine pounds). Competition may bring it down to 5 cents or conditions favorable to the grocer may permit it to be as high as 40 cents per quarter-barrel sack. On smaller sacks the gross profit is often higher in proportion, but the net profit possibly less in fact, as the cost of handling and delivering a small sack is practically the same as that of a large one.

The retail price in the long run follows the mill price, but does not parallel it in all its day-by-day fluctuations. The movement up or down is cushioned by the jobber and retailer; the angles of fluctuations in the line of movement of wholesale prices are much greater than in the line of retail prices. While the retail price follows a material change in the wholesale price the change in the retail price does not occur at once, but generally lags behind for some time. A few grocers follow the market closely by advancing their retail price promptly as the wholesale price advances, others run the old price until they get in a new stock at an advanced cost, when of necessity they must advance their retail price.

Three Factors are Noticeable.

Grocers do not like to advance their prices, as it often means friction with their customers, and there is a disposition on the part of many grocers to go slowly and let competitors first announce the higher price. On the other hand, as wholesale prices decline and some grocers drop at once, there is a general tendency to hold a good margin of profit as long as possible, or until competition eventually brings the retail price down.

In a survey of the distribution of United States wheat and flour, three things are noticeable:—The intensely competitive character of the business, the excess in the equipment for distribution, and the desire for independence of the people engaged in production and distribution. If one farmer will not sell his wheat at the price offered another farmer will. Local dealers, jobbers and millers bid against each other in buying and selling.

And not only are the products crossing trails in distribution, but travelling salesmen of many mills and flour jobbers are duplicating their labors in the same territory. Beginning with production, there are more seeding and harvesting machines in the hands of farmers than would be needed if there were co-operation in production and each machine kept in operation the entire harvest season. There are more elevators in the wheat area than are needed, each operating most of the time on less than its full capacity. In some sections there is needless duplication of railroad trackage. More grain jobbers and commission men are in the field than can find continuous business. It is asserted that the mills of the United States could grind all the wheat raised in the United States in 144 days, working 24 hours per day.

CANADIAN PACIFIC ADDS STEAMERS

London, June 18.—Two new C.P.R. steamers will be launched next week.

The Missanabic has accommodation for 520 second and 1,200 third-class passengers, and is for the Atlantic service. It will be christened by Mrs. McLaren Brown at Glasgow on Monday. The Princess Margaret, for the British Columbia coasting service, will be christened at Dumbarton on Wednesday by Mrs. Rene Redmond, youngest daughter of Sir Thomas Shaughnessy.

Toronto's growth and development is set forth in a booklet issued by the board of trade. Facts and figures are alphabetically arranged. A summary shows the city to be the capital of Ontario, second largest city in Canada, the city of homes, hive of manufacturing, wholesale jobbing centre of Canada, mecca of trade and commerce, a popular resort for tourists, centre of lake passenger traffic, seat of Canada's largest university (Toronto University), educational centre of Canada, legal and judicial centre of the province, automobile centre of Canada, and home of the largest departmental store in the British Empire.

July Dividend

Re-investment

The prime factor of an investment is safety. Canadian Municipal Government Debentures have an unbroken record of security. They are considered one of the safest forms of investment obtainable.

BILLION BRICKS USED IN BUILDING

Canada's New Factories and Homes, and Other Buildings Absorbed This Total—Worth Nearly $8,000,000

The total production and sales of all building brick, including the common and pressed varieties, but excluding ornamental, paving, firebrick and fireproofing, were as follows:—

In 1912 the total sales were 894,371,954, valued at $8,620,229, made up of 769,191,532 common, valued at $7,010,375, or an average value per thousand of $9.11, and 125,180,422 pressed brick valued at $1,609,854, or an average value per thousand of $12.86. In addition to the common and pressed brick there was a production of ornamental brick of 371,356 valued at $8,595, and a production of fire proofing brick and architectural terra-cotta, valued at $445,853.

For Former Years.

In 1911 the total sales were 732,901,056, valued at $6,515,472, made up of 645,550,517 common, valued at $5,420,890, or an average value per thousand of $8.[illegible]; and 87,350,539 pressed brick, valued at $1,094,582, or an average value per thousand of $12.53. In addition to the common and pressed brick there was a production of ornamental brick of 605,643, valued at $11,281, and a production of fireproofing brick and architectural terra-cotta, valued at $400,585.

In 1910 the production, according to a report of the department of mines prepared by Mr. J. McLeish, B.A., was 627,715,319 common brick, valued at $5,105,354, or an average value per thousand of $8.13; and 67,895,034 pressed brick, valued at $807,294, or an average value per thousand of $11,89; the total of the two classes being 695,610,353, valued at $5,912,648. The production of ornamental brick in 1910 was 703,345, valued at $10,092; and of fireproofing and architectural terra-cotta $176,979.

Growing Imports of Bricks.

The exports and imports of building brick since 1891 and 1880 respectively, are shown in the two following tables. The exports have never been large, averaging for a number of years past about $6,000 per annum. The exports fell off somewhat in 1911 to a value of $3,977, but increased again in 1912 to a value of $8,493. The annual imports for a number of years previous to 1903 averaged only about $20,000 in value; during the past nine years, however, the imports have rapidly increased from $100,000 to nearly $800,000 per annum. During the calendar year 1912, the imports were 81,425,000 brick valued at $763,470, of which 3,071,000, valued at $32,731 or an average of $10.66 per thousand, were imported from Great Britain, and 78,350,000, valued at $730,739, or an average of $9.33 per thousand, from the United States. The imports during the calendar year 1911 were 51,102,000 brick valued at $475,865, of which 6,404,000, valued at $72,675 or an average of $11.35 per thousand, were imported from Great Britain, and 44,698,000 valued at $403,190 or an average of $9.02 per thousand, from the United States.

◆

INCREASED SALE OF BRITISH MAGAZINES

London, June 18.—The British Empire League deputation urged Postmaster-General Hobhouse yesterday afternoon not to increase the magazine postage rates to Canada, and to cheapen the rates to Australia, New Zealand and South Africa. G. H. Perley, acting Dominion High Commissioner, said the use and sale of British magazines had been largely increased by facilities given by Canada.

Mr. Hobhouse in reply pointed out that the whole of the penny-a-pound now charged was absorbed by the cost of transmission from the office of posting to the port of departure. The cost of extending the existing rates to New Zealand, Australia and South Africa would mean the loss of revenue of £27,000 a year, with the extra expenditure of £80,000. The charges of the shipping companies were also going up in all directions.

He feared he could not at the moment hold out much hope that he could adopt the proposals of the deputation. Both the Glasgow and Dublin Chambers have passed resolutions urging the Government to meet the Dominion Government in the matter.

VALUE OF COAL INDUSTRY

Thirty-one Million Tons of Coal Consumed in Canada Last Year—Production and Value

The coal mining industry in Canada in 1913 was marked by an increased production in Nova Scotia and New Brunswick and in Alberta and a falling off in Saskatchewan and British Columbia. In the latter province the decrease was entirely due to the continuance throughout the year of the labor strike in the mines on Vancouver Island. The lessened production in these two provinces was however more than offset by the increased output in Alberta and Nova Scotia so that the net result for the year was an increase of about 602,260 tons or 4.15 per cent.

The total production of marketable coal for the year comprising sales and shipments, colliery consumption and coal used in making coke, etc., was 15,115,089 short tons, valued at $36,250,311 as against 14,512,829 tons, valued at $36,019,044 in 1912. Nova Scotia shows an increase of 188,839 tons or 2.4 per cent., Alberta an increase of 903,800 tons or 27.9 per cent., Saskatchewan a decrease of 16,167 tons or 7.1 per cent., and British Columbia a decrease of 494,548 tons or 15.4 per cent., according to the estimate of Mr. J. McLeish, B.A., of the department of mines. The figures for the Yukon represent for 1913 the production from the Tantalus field only.

Production by Provinces.

The production by provinces during the last three years is given below:—

	1913.	
	Tons.	Value.
Nova Scotia	7,972,727	$17,796,265
British Columbia	2,714,449	8,482,653
Alberta	4,144,377	9,462,836
Saskatchewan	209,175	347,685
New Brunswick	70,311	140,622
Yukon Territory	4,050	20,250
Total	15,115,089	$36,250,311

The exports of coal in 1913 were 1,562,020 tons, valued at $3,961,351 as compared with exports of 2,127,133 tons, valued at $5,821,593 in 1912, a falling off of 565,113 tons or over 26 per cent.

Imports of coal during the year included bituminous, round and run of mine 10,743,473 tons, valued at $21,756,658; bituminous slack 2,816,423 tons, valued at $4,157,622; and anthracite 4,642,057 tons, valued at $22,034,839; or a total of 18,201,953 tons, valued at $47,049,119.

The imports in 1912 were bituminous, run of mine, 8,491,840 tons, valued at $16,846,727; bituminous slack 1,915,993 tons, valued at $2,550,992 and anthracite 4,184,017 tons, valued at $20,080,388 or a total of 14,505,810 tons, valued at $39,478,637.

Burnt 31,000,000 Tons.

Thus the increase of imports of coal in 1913 amounted to 3,666,143 tons or nearly 25 per cent. The increase in the imports of bituminous run of mine being 2,251,633 tons or 26.5 per cent., increased imports of slack 900,430 tons or 47 per cent., increased imports of anthracite 458,040 tons or 11 per cent.

The apparent consumption of coal during the year was 31,685,456 tons as against a consumption of 26,934,800 tons in 1912. Of the consumption in 1913 about 42.8 per cent. was from Canadian mines and 57.2 imported.

The total output of oven coke during 1913 was 1,517,133 tons of 2,000 tons made from 2,147,913 tons of coal of which 1,598,912 tons were mined in Canada and 549,001 tons imported. The total quantity of coke sold or used by the producers during the year was 1,530,491 tons valued at $5,547,604. By-products from coke ovens recovered during the year included [illegible] tons of ammonia sulphate; 8,371,600 gallons of tar and [illegible] thousand feet of gas and the total value would approximate 4,800,150.

CANADA AND WORLD'S IRON PRODUCTION

Britain Exports Fourteen Per Cent. of Her Pig Iron—Potential Resources Yet to be Developed

The production and consumption of iron ore and pig-iron, and the production of steel, in the United Kingdom and the principal foreign countries during recent years, are shown in a report issued by the British government.

While exact figures are not available regarding the output of iron ore in 1912, the output of the chief countries, United States, Germany, France, Spain, Russia, Sweden, Austria-Hungary, Canada and Belgium exceeded 146,000,000 tons in 1912, and adding minor countries, the world's output for the year was about 152,000,000 tons.

The following shows the total output of iron ore in 1911 and 1912:—

	Tons. 1911.	Tons. 1912
United States	43,877,000	55,150,000
Germany (including Luxemburg)	29,399,000	32,190,000
France	16,372,000	18,741,000
United Kingdom	15,519,000	13,790,000
Spain	8,633,000	......
Russia (excluding Finland)	6,882,000	8,054,000
Sweden	6,055,000	6,593,000
Austria-Hungary	4,640,000	2,880,000
Canada	188,000	156,000
Belgium	148,000	165,000

World's Actual Iron Resources.

The output in Germany shows an increase annually from 1908 to 1912, that of the latter year being in excess of any previous year. The output of the United Kingdom in 1912 was the lowest recorded since 1904, attributable to the dispute in the coal trade which caused the temporary cessation of the majority of the country's blast furnaces. The output of France continues to increase, that of 1912 being 80 per cent. above the output of 1908.

The ore resources of the world as given in the report are based on an estimate made at the International Geographical Congress at Stockholm in 1910. It was then estimated that the total actual resources of iron ore existing in deposits that can at present be worked at an economic profit amount to 22,408 million tons; representing 10,192 million tons of ore.

The actual resources of the principal ore-producing countries are estimated to be, in the United States, 4,258 million tons, the equivalent in metallic iron being 2,305 million tons; in Germany and Luxemburg 2,787 million tons, estimated to yield 1,360 million tons of metallic iron; in the United Kingdom, 1,300 million tons equal to 455 million tons of metal; in France, 3,300 million tons, equal to 1,140 million tons of metal; and in Spain, 711 million tons, equal to 349 million tons of metal.

In addition, the potential resources of the world not yet developed are estimated, as far as they can be calculated in figures, to amount to 123,377 million tons of ore, representing 53,136 million tons of iron.

Three Large Producers.

The world's production of pig iron in 1912 was about 72 million tons, the United States, Germany and the United Kingdom accounting for about seven-ninths of the total. The United States output was 29,727,000 tons; Germany's 17,582,000 tons; and the United Kingdom's 8,751,000 tons. For the first half of 1913 the figures for the three principal countries were:—United States, 16,489,000 tons; Germany, 9,414,000 tons; United Kingdom, 5,411,000 tons. For the last half-year the figures are estimated at: United States, 14,600,000 tons; Germany, 9,600,000 tons; United Kingdom, 5,069,000 tons. The total exports of pig iron from the United Kingdom on the average of the five years, 1908 to 1912, amounted to 1,220,000 tons per annum, or 14 per cent. of the total British production.

The combined output of steel in the United Kingdom, Germany and the United States in 1912 exceeded 55 million tons; and the world's output may be estimated at between 71 and 72 million tons.

CORPORATION INSURANCE

Policies on Lives of Responsible Heads of Business Houses—Practice is Growing

A firm or corporation very much resembles a family. When the head of a family dies it is well to have some financial reimbursement for the great loss that always ensues, and the same is equally true of a business house or corporation.

Firms and corporations are more and more coming to see the advisability of insuring the lives of the members or responsible heads for the benefit of the firm if the individual should die, the expense to be met by the firm itself like any other legitimate expense.

Death of a Partner.

At the death of a partner it frequently happens that the heirs wish to withdraw his interest. Life insurance provides an immediate sum with which the surviving partners may purchase the deceased's interest without impairing their own capital or being obliged to take in as a partner an outsider who may not be acceptable to the business, an end that may be thus accomplished—and this is most important—without sacrificing the family interests of the deceased partner.

There is greater danger of a partner dying than of the stock being consumed by fire, and the consequences of each catastrophe should be discounted in advance.

For His Company's Benefit.

The president of a New York company discloses a somewhat new phase of the question in a recent letter. He says: "The writer already carries $50,000 on his life for the benefit of the company. We believe the brains or guiding factor of every business or corporation should carry adequate insurance to offset the mistakes of new minds that have not had the same amount of business experience or judgment to make the business successful."

Increased credit at the bank is another direct result of partnership insurance that will appeal to many. Any banker will corroborate this. Banks often nowadays suggest life insurance before they make a loan, and the credit men of the wholesale houses of the country are more and more demanding that life as well as fire insurance be carried before extending credit to merchants, business men and corporations.

The cost of such insurance is inconsiderable in comparison with the benefits derived. Annual dividends, if taken in cash, reduce the cost, whatever it may be, below the tabular rate, and the growing cash and loan values should always be taken into account, and may be carried on the books as an asset.

Policy for each One.

Separate policies for each responsible head are preferable to joint life policies for the reason that the death of a single individual terminates the joint life policy for all; also if the remaining partners should desire to renew the joint life contract, some one or more of them might not be able to get new insurance, and even if they could get it they would have to pay the higher rate of an older age.

Business insurance may take the form of ordinary life or limited payment life policies (annual dividends) at low net annual cost, or of endowment policies (annual dividends) at a higher annual premium, but under which—and this is most important—a sinking fund may be established, offering all the advantages for a firm that endowment insurance offers to the individual. The latter is real investment insurance and returns at maturity all the money paid in premiums with annual dividends besides.

◆

WINNIPEG'S EXHIBITION.

The Canadian Industrial Exhibition takes place in Winnipeg from July 10th to 18th. The live stock and agricultural section is to be the main feature.

Many improvements have been made in the exhibition grounds this year and one feature of interest will be a working model of the Panama Canal. Mr. Fred J. C. Cox is president, and Dr. A. W. Bell, secretary and manager.

Business men of Winnipeg have succeeded in raising a fund of $100,000 to back up this year's fair.

WESTERN FREIGHT RATES

V.

Rate Structure in the East

There was practically no rate regulation in Canada prior to 1904. It is a matter of common knowledge that the operations of the Grand Trunk down to this time and subsequently were accompanied with financial results that were far from satisfactory to its shareholders.

It is extremely hard to believe that if the railway management had any concern in its profits (as of course it had) and could have raised rates, and at the same time continued to do business in a proper volume, that the rates would not have been raised. It is also extremely difficult to think that the same Canadian Pacific directorate, pictured as anxious to make an undue profit out of the west, would maintain such rates in its Atlantic division, the result of which rates is that not only does that portion of the railway show no return of profit to the company on its investment, but is accompanied by an actual loss in operation, unless the company found it impossible to increase its rates.

Approaching the question further on the ground of self interest, it is very hard to understand why the Canadian Pacific should discriminate against that part of the country in which, in the first instance, almost all its assets, and at the present time by far the larger part of its properties are situate, in favor of another section of the country in which the railway had to commence with no interest at all, except so far as its traffic operations were concerned, unless there was same real compelling underlying reason for it. This underlying reason is to be found in the rates which the Canadian Pacific Railway Company was forced to meet, and which were effective in eastern Canada at the time of its advent.

Apart altogether from the strong inferences that may be drawn from the railway history of the country it should also be borne in mind that no evidence has been submitted by any of the complainants negativing the force either of water or of railway competition in the east, or the resultant effects on the different rate structures.

The evidence of the different traffic officers of the railways has remained unchallenged except in so far as cross-examination and arguments of counsel are concerned. On the other hand to the extent that the question has been dealt with by witnesses called by counsel either for the Dominion or the provinces, the evidence submitted by the railways has been confirmed.

Mr. Muller, the expert called by counsel for the Dominion government, for example, stated that in the east the Canadian Pacific has to meet the competition of other carriers mentioned in the table contained in his exhibit, on a large share of its traffic. The exhibit referred to is that illustrating the operating results and gross profit ratios obtained by 25 representative companies operating in the eastern United States. Mr. Muller, therefore, agrees that the Canadian Pacific rates in eastern Canada, on a large share of its traffic, are influenced by competitive rail haul conditions. A rate which may illustrate the result of this railway competition in the east, although of immediate benefit to the western exporter, rather than to the eastern shipper, but lowering the earning capacity per ton mile in eastern Canada is the winter rate on grain. The rate from Duluth to New York is 23 cents, the haul is 1,376 miles, making a resulting per ton mile return of .0334 cents. Owing to the bonding privilege available in both countries exporters in either country can always obtain the benefit of the lowest rates irrespective of international boundaries. The Canadian Pacific meets this rate, its charge on grain from Fort William to St. John being 23 cents. The haul in this case is 1,465 miles and the resulting ton mile return is .0314 cents.

Examples from United States.

Mr. Calderhead, an expert of the public service commission of the state of Washington, who was examined as a witness on a commission obtained by Mr. Macdonald, counsel for British Columbia, proved that merchandise moving from New York to Chicago at a rate of 75 cents for [illegible] miles (1.65 cents per ton per mile), takes from Chicago to St. Paul a rate of 40 cents for 411 miles (1.94 cents per ton per mile), and from St. Paul to Seattle a rate of $[illegible] for [illegible] miles

(3.38 cents per ton per mile). He also stated that in his opinion the 75 cent rate was very probably influenced by rail and water competition; the 40 cent rate by lake competition, and that the $83 rate, St. Paul to Seattle, is without competition except the figurative competition of the rate on the eastern coast plus the boat rate.

The result then is that in the opinion of an expert having no connection with any railway, but an officer of a rate regulating commission of a western state: the rates between New York and Chicago are influenced by both rail and water competition through a district which certainly has no better water ways than that part of Canada east of Fort William possesses along the lines that traffic actually moves; with the further result that merchandise is carried on a movement New York to Chicago as compared with a movement of like merchandise from St. Paul to Seattle at a rate per ton mile for the shorter haul slightly less than one-half of the rate for the longer haul.

His conclusion that the rate from Chicago to St. Paul of 1.04 cents per ton mile for a haul of 411 miles—while the rate from St. Paul to Seattle is 3.38 cents per ton mile for 1,773 miles, is influenced by lake competition—affords perhaps an extreme example of the principle.

A combined water and rail route from Chicago to Duluth or Superior (lake ports for St. Paul), is by Lake Michigan through Lake Huron and Sault Ste. Marie canals and Lake Superior, making a water haul of approximately 950 miles. A rail haul to St. Paul of 140 miles (the shortest railway mileage), completes the movement. In other words, the effectiveness of water competition is recognized as controlling rates to a point 140 miles inland.

Special Rates to Competitive Points.

It is not necessary for the Railway Commissioners to make any finding as to the effectiveness of the competition on the rates of this particular movement. It may be well said that the witness was examined while the inquiry was only directed to rates in British Columbia as compared with rates in the prairie provinces and eastern Canada, so that neither counsel for the Dominion nor for the other provinces had any opportunity to cross-examine at that time. It is equally true that before evidence had been taken in the western freight inquiry proper, all these proceedings had been incorporated into and made part of this case; that Mr. Calderhead attended subsequent sittings; that no application was made by anyone for leave to cross-examine him, and that no evidence has been called to contradict his statement.

On economic principles special rates to competitive points, or in competitive zones, as already noted, have been justified. They have been practically always regarded as proper in principle and probably must apply for all time in the future, at least until such time as railways cease to be operated for profit and are carried on as a matter of governmental operation irrespective entirely either of cost or value of services, or the necessity of obtaining business.

For the reasons stated, I am of the opinion that while discrimination exists between the rates charged east and west of Port Arthur the discrimination is justified under the Railway Act and decisions of the board; and is neither undue or unjust.

While in the main the rate structure of eastern Canada is justified on the basis of water and railway competition, it may be that at some points change of conditions are such as would justify some increase of rate if discrimination exists, which cannot fairly be excused on account of competitive reasons. The Railway Board did not have before it information that would justify such action in the present case, is the conclusion arrived at in the judgment of the commissioners.

COMPANIES LICENSED.

CANADA'S EXPRESS COMPANIES MADE MONEY

Everything Needed to Carry on the Business Seems to Have Come Out of Earnings

To date the parcel post system apparently has made no great hole in the earnings of express companies operating in Canada. When the statistics for 1914 are available next year, some idea will be gained of the effect of parcel post on express revenue. The operating mileage in Canada by the express companies last year was 32,557 as compared with [illegible],445 in 1912. In addition 17,035 miles were reported as attaching to outside operations, chiefly in connection with ocean going steamers.

By far the greatest part of the express business in Canada is over steam roads. Last year, this division accounted for 29,476 miles; steamboat lines for 7,243; electric lines, 212; while stage lines accounted for 122 miles. The greater part of the operating mileage was in Ontario, the figures for that province being 10,333. Manitoba, Saskatchewan and Alberta accounted between them for about 9,000 miles. The Dominion Express Company operated in connection with the Canadian Pacific Railway, had 16,795 of the total mileage, the Canadian Express Company, of the Grand Trunk Railway, having 6,926; and the Canadian Northern Express Company of the Canadian Northern Railway, 5,762 miles.

Compared with the gross receipts from operation, the capitalization of express companies is small. The capitalization of distinctly Canadian express companies, apart from United States companies operating in Canada, on June 30, 1913, was $4,845,200. All but $40,000 of this consisted of common stock. The increase over 1912 was $100,000. The total was made up as follows:—

British America Express	$ 100,000
Canadian Express	1,705,000
Canadian Northern Express	1,000,000
Dominion Express	2,000,000
	$4,805,000

To this aggregate should be added the $40,000 of funded debt attaching to the Dominion Express Company.

The returns made show that $2,865,200 was realized in cash for the $4,805,200 of common stock outstanding; but it is quite clear that only an exceedingly small percentage of the total was invested in physical property or equipment. Practically everything needed to carry on an express business seems to have been provided out of earnings. There is no escape from the conclusion that the establishment of an express service by the railways concerned—chiefly the Canadian Pacific, the Grand Trunk and the Canadian Northern—has not involved on their part the outlay of any considerable amount of capital.

Real property and equipment was, in 1913, given a cash valuation of $2,938,789—an increase of $270,265 for the year. This is property and equipment used only "in operation," and does not include investments made in other properties. The account is made up as follows: Real estate used in operation, $760,200; building and fixtures, $1,265,276; equipment—horses, $201,066; vehicles, $262,841; other equipment, $449,405; total, $2,938,789. Gross receipts from operation in 1913 amounted to $12,827,478, as compared with $10,994,418.10 in 1912.

Express privileges were returned at $5,708,408.23. This was the sum paid by express companies to railways and other carriers for the right to carry on business over their lines. It was equal to 44.50 per cent. of gross earnings. By companies the ratio of express privileges to gross earnings was as follows:—

American	48.6
British America	40.[illegible]
Canadian	44.[illegible]
Canadian Northern	28.9
Dominion	44.6
Great Northern	50.2
United States	47.[illegible]
Wells, Fargo and Company	[illegible]

The contracts with carriers show variations all the way between 30 per cent. and 60. Some of them are at a rate per

100 pounds. Others are on a basis of a percentage relationship to freight charges. It would be quite impracticable to work out, from the data returned, anything in the nature of a summary of the payments for express privileges.

Operating expenses, which have nothing whatever to do with express privileges, totalled $5,743,544.73, as against $4,880,120 in 1912.

Details of revenue, express privileges and operating expenses will be found in tables 4, 5 and 6.

The following summary of income account will show the financial results of operation for the year:—Gross receipts from operation, $12,827,478.96; less express privileges, $5,708,408.23; operating revenue, $7,119,070.73; operating expenses, $5,743,544.73; net operating revenue, $1,375,526; net revenue from outside operations, $45,891.37; total net revenue, $1,421,417.37; less taxes, $103,137.74; balance for the year, $1,318,270.63.

The foregoing balance for the year included the following items of net revenue to the credit of purely Canadian companies:—British America, $961; Canadian, $340,957; Canadian Northern, $218,839; Dominion, $831,892.

Net earnings were equal to 10.27 per cent. of gross earnings. Having reference to capital liability—the character of which has been dealt with—net earnings gave the following results to Canadian companies:—

Express Company.	Capital liability.	Percentage of net revenue.
British America Express	$ 100,000	10.4
Canadian Express	1,705,200	18.4
Dominion Express	2,040,000	38.8
Canadian Northern Express	1,000,000	21.3

The Dominion Express Company paid a dividend of 10 per cent. on $2,000,000 of common stock; while the Canadian Northern paid a dividend during the year—presumably out of accumulated net revenue—of $954,356. None of the other companies declared a dividend during the year.

The following is a summary of operating revenues for the year 1913:—Revenue from transportation—Express revenue, $12,400,034; miscellaneous, $34,287; total, $12,434,321. Other than transportation—Money orders, domestic, $173,261; money orders, foreign, $21,137; travellers' cheques, domestic, $23,145; travellers' cheques, foreign, $2,892; c.o.d. cheques, $98,779; other earnings, $73,042; gross revenue, $12,827,478.

◆

RESERVING WATER POWER SITES.

Consistent with the policy of the Dominion government to preserve the water powers for the people, the department of the interior is placing under reservation all vacant Dominion land that the superintendent of water powers may recommend to be valuable for the development of water power, says Conservation.

Six whole sections of land, in township 108, range 6, west of the 5th meridian, have recently been reserved from disposition of any kind until the engineers of the water power branch have had an opportunity to make a complete survey of the famous power site at Vermilion falls, on the Peace River in northern Alberta.

Similar reservations have been made on the various rivers in the provinces of Manitoba, Saskatchewan, Alberta, and in the railway belt of British Columbia. Particular mention might be made of reservations covering land contiguous to Grand Rapids on the Athabasca River, the various power sites on the Elbow and the Bow Rivers, in the province of Alberta; for land required for the development of power at Grand Rapids on the Saskatchewan River, and all unoccupied land along the Winnipeg River, in the province of Manitoba.

Other reservations will be made from time to time upon the receipt of sufficient information to enable the superintendent of water powers to make a definite recommendation covering a description of the land that might be required for power purposes.

GROWING TRADE WITH BARBADOS

Though the importations to Barbados from the United Kingdom and the United States suffered a considerable decline, the imports from Canada increased, states Canadian trade commissioner Flood. This was the only large supplying country that had an increase. A slight improvement took place also in the imports from Newfoundland and Holland. The trade with Canada has been growing, and will show at the end of the present year a higher figure than has yet been reached. In addition to the increased imports from Canada in foodstuffs, there is a field for some increase in Canadian manufactured goods if properly canvassed. The following statement will show the imports by countries for the last two years:—

	1912.	1913.
United Kingdom	£ 559,621	£ 518,611
United States	426,652	381,251
Canada	183,8[illegible]	192,495

Total	£1,465,431	[illegible]

◆

CANADA STEAMSHIP VOTING TRUST CERTIFICATES.

Mr. C. A. Barnard, K.C., general counsel of Canada Steamship Lines, Limited, and a director of the company, has stated in regard to the disposition of the company's shares:—

"$12,000,000 par value of ordinary stock of Canada Steamship Lines, Limited, had been issued to the vendors of Canada Steamship Lines of the different companies now comprising Canada Steamship Lines, including the shareholders of the Richelieu and Ontario Navigation Company, Limited; Interlake Line, Limited; Ontario and Quebec Navigation Company, Limited; and others, as also to the financial interests who had placed the $[illegible],300,000 of bonds of the company in London, and to the underwriters of such bonds.

"The holders of $6,255,000 par value of these ordinary shares had come to the conclusion that it was in their interest, as also in the interest of the company, to arrange for a permanent management of the company, and had, therefore, pooled their shares by depositing them with the Royal Trust Company under an agreement that the voting power on such shares would be vested for a term of five years in the London advisory board of the company, consisting of Sir Trevor Dawson, Sir Stephen Furness, Albert Vickers, Sir Vincent Calliard and others.

"The owners of these shares so pooled, as above explained, received trust certificates against their shares, which certificates entitled them to all the benefits of the shares, save and except the right to vote upon such shares during the life of the trust, which was subject to being terminated at any time that the London advisory board deemed proper during the five years.

"These voting trust certificates had been regularly listed on the Montreal and Toronto Stock Exchanges, and would be also listed on the London Stock Exchange, so that the holders of such certificates would be enabled to deal with them as fully and as advantageously as in the shares they represent.

"The arrangement made in the present case is a quite usual one, being similar to that adopted by a number of other companies, the trust agreement and the voting trust certificates having been copied practically verbatim from one in force in connection with one of the largest and most successful public industrial corporations of Montreal."

Regarding the voting rights of preferred shares [illegible] years in arrears in dividends, this was the same as in Canada Cement and many other companies.

"SOLID AS THE CONTINENT"

PERSONAL NOTES

Mr. A. J. Glazebrook, of Messrs. Glazebrook and Cronyn, exchange brokers, Toronto, is returning to Canada after a visit to England.

Mr. Hurd, the author of the Windermere cables for Canada, a service enjoyed by *The Monetary Times*, may make a visit to Canada this year.

Mr. Edwards, formerly assistant editor on the staff of *The Monetary Times*, is now holding a similar position on the London (Eng.) Evening News.

Mr. Wood, of Messrs. Wood, Gundy and Company, will leave the London office for Canada in August. Mr. Wood has been there for two years. Mr McIlraith will be in charge of the London end of the growing business of this well-known bond house.

Sir William Van Horne is in London. He was to have sailed on the ill-starred "Empress of Ireland." His boat from Cuba was a day late, and prevented him from doing so. Earl Grey was also to have sailed on that vessel. Sir William, as is known, is not actively engaged in Canadian finance just now, except as a director of several corporations. He is devoting his time to the enlargement of his famous art collection.

◆

NEW PARTNERS IN TORONTO FIRM

Some changes have taken place in the well-known Toronto financial house of Messrs. Brent, Noxon and Company Mr W. C. Noxon has withdrawn from the firm and Messrs. D. J. McLeod and Mr. H. Brent have been admitted in partnership. The same firm name, Brent, Noxon and Company, will be continued. New offices are now being occupied in the Dominion Bank Building, King and Yonge Streets, Toronto.

◆

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended June 26th, 1914:—

Right-of-Way Mine, 64,880; Cobalt Townsite Mine, 75,650; Dominion Reduction Company, 86,100; McKinley-Darragh-Savage Mine, 166,420; Peterson Lake, 59,730 (Seneca Superior shipment); Peterson Lake (Gould shipment), 40,000; La Rose Mine, 171,570; Nipissing Mining Company, 124,100; total, 738,450 pounds, or 369 tons. The total shipments since January 1st, 1914, are now 19,779,873 pounds, or 9,889 tons.

In 1904 the camp produced 158 tons, valued at $316,217; in 1905, 2,144, valued at $1,437,106; in 1906, 5,835 tons; in 1907, 4,850 tons; in 1908, 29,360 tons; in 1909, 20,941 tons; in 1910, 34,041 tons; in 1911, 25,089 tons; in 1912, 21,509 tons; in 1913, 20,261 tons.

◆

SHINGLE TRADE ON PACIFIC COAST

Mr. C. E. Patten, of the Atlas Lumber Company, Seattle, in response to an enquiry of the Wall Street Journal as to whether the business depression is merely psychological and due to no natural condition as expressed by President Wilson, stated:—

"Prior to the present removal of duty from shingles, it is estimated that the shingle mills of British Columbia were operating not more than one-half time, and under the old law, there were practically no shingles imported into the United States. Since the first day of January, there have been built in British Columbia, shingle mills containing a total of 125 additional shingle machines, and even with this additional capacity, every mill is running full time and a great many of them operating nights. All of the additional shingles manufactured are being shipped into the United States.

"Although the United States government has refused to furnish us with the number of shingles now being imported, it has been variously estimated at from 700 to 1,200 cars per month, and as the average shipment from the State of Washington for the past ten years has been about 2,500 cars per month, it means that we are now losing one-half of our shingle trade, which means that one-half of our mills must close down and one-half of our present employees secure employment in other lines and the remaining half work at a reduced wage scale. As Oriental labor is used almost entirely in the shingle mills of British Columbia, it is estimated that their labor cost of manufacture is from 25 to 30 per cent. less than our labor cost."

Home Bank Had Satisfactory Year

NORMAL PROGRESS MAINTAINED DURING THE PAST TWELVE MONTHS

The Annual Meeting of the Shareholders of the Home Bank of Canada was held at the head office, 8 King Street West, on Tuesday afternoon, June 30th. The features of the Annual Report as submitted for consideration showed net profits $102,442.72, or 10 per cent upon the paid-up capital. The Rest Account has been brought up to one-third of the Capital. $65,000 has been written off premises and a pension system established with $10,000 as a nucleus fund. Two new branches have been opened in Toronto during the year. An independent auditor was appointed for the ensuing year.

On motion, the President of the Bank, Colonel The Honorable James Mason, took the chair, and Mr. O. G. Smith, the Secretary of the Bank, acted as Secretary of the meeting. The report of the Directors was then submitted as follows:—

REPORT OF THE DIRECTORS.

The Directors have much pleasure in submitting to the Shareholders the Ninth Annual Report and Balance Sheet of the Bank, together with a Statement of Profit and Loss Account, giving the result of the Bank's business for the year ended 31st May, 1914.

Quarterly dividends have been paid and provided for at the rate of seven per cent. (7) per annum. The $40,000 set aside from the profits of 1913 has been written off Bank Premises and Furniture Account, together with a further $25,000 appropriated from the profits of the year just closed, and $10,000 has been placed to Pension Fund. The sum of $16,666.66 has been added to Rest, making that account $666,666.66, equal exactly to one-third of the subscribed capital of the Bank.

Two new branches of the Bank were opened during the year, at the corner of Yonge Street and Alcorn Avenue, and at the corner of Yonge Street and Eglinton Avenue, both in the City of Toronto. The branch at Cartierville, in the Province of Quebec, was closed, the growth of that district being somewhat disappointing.

Under the Bank Act of 1913 you will, for the first time, be called upon to appoint an Auditor for the Bank and to fix his remuneration.

No new stock having been allotted during the year, the number of Shareholders remains approximately the same.

The usual examination by the Directors of the treasury and securities was made and the branches carefully inspected during the year.

ADDRESS OF THE PRESIDENT

The net profits for the year are $102,442.72, being about 10 per cent. on the average Paid up Capital, which may, I consider, be deemed satisfactory, in view of the unsettled conditions which prevailed during the whole of the fiscal year. The $40,000 set aside, as intimated at the last Annual Meeting, to be written off Bank Premises and Furniture Account, has been applied, together with an additional $25,000 from this year's profits. Last year the Shareholders were good enough to vote a contribution of $10,000 as a nucleus for a Pension Fund; this has now been appropriated and the Fund inaugurated with the current year.

Before commenting on any changes in the Balance Sheet, I may say that the financial forecast made a year ago has more or less been justified. Conditions have altered so little that one prefers not to hazard any decided opinion as to when the expected improvement may come. It must be borne in mind that the business depression is not peculiar to this country but general. Canada depends largely upon outside capital for [illegible] undertakings, and consequently the late [illegible] in the Balkans, political conditions in Great Britain and the [illegible] state of Mexico has had a far reaching effect.

[illegible] construction in the two additional trans[illegible], with completion now in sight, and [illegible] national importance, have necessitated [illegible]. Expansion in the districts of the country in which this work is being carried out is looked for to warrant the capital expenditure made. When this takes place we may reasonably expect any further needed assistance of British and foreign capital, and with speculative real estate and other unsound trading discouraged, confidently look forward to a gradual return to normal conditions.

While our deposits for the past year show a reduction in actual figures—and we are not alone in this—I may say, that it is all accounted for by the expected withdrawal of some large temporary deposits in Current Account which were in our hands at the 31st May, 1913, the date of the last Statement presented to you. On the other hand, the number of accounts on our books has largely increased, and the amount of deposits in the Savings Bank Department show a satisfactory gain.

INCREASED SAVINGS DEPOSITS.

In common with most of the other Banks, our note circulation shows a reduction. This may be attributed to various causes, the most important of which was the early marketing of the grain crops in the Northwest. For some years past we have looked to our grain business in the West to utilize a large part of our circulation, and for the first time since this connection was formed we encountered conditions that may not soon again occur

The weather last year was particularly favorable to the harvesting and marketing of the crop, so that a larger proportion was handled before the close of navigation than in any previous season of recent years. In addition, owing to the general financial conditions which prevailed during the latter part of 1913, considerable pressure was brought to bear by creditors upon farmers for the early payment of their obligations. This resulted in a larger percentage than formerly of grain going forward, with instructions to sell. As a result, circulation paid to farmers showed a decided falling off immediately after the close of navigation, and the figures for the succeeding months—December to March—record a continued redemption of Bank notes without the usual opportunity for the issue from the marketing of grain through the winter months. The reduction from the high point in November, 1913, to the figures on the 31st March, 1914, amounted to over $900,000, while in former years the average reduction for the same period was approximately $200,000. The smaller volume of business transacted in Canada also had its effect on circulation. Merchants and manufacturers did not transact as much business as during the previous year. Railway earnings from the 1st of July, 1913, to May 31st, 1914, showed a decrease of over ten million dollars. The consequent shrinkage in circulation is mainly attributed to these principal causes, but I may say that we are making arrangements which should not in future leave us dependent upon any one source to maintain our circulation at a high level

BRANCHES IN TORONTO.

In accordance with the policy of the Bank to purchase sites for Branch Offices in Toronto, a property was purchased at the south-east corner of Yonge Street and Eglinton Avenue, and also the vacant lot on the north-west corner of Yonge Street and Woodlawn Avenue, where we propose to erect a suitable building for the business at present conducted at the corner of Yonge Street and Alcorn Avenue, known as the "Yonge Street Subway Branch." The latter site is also the property of the Bank, and when disposed of will go far to effect a reduction in Bank Premises Account, corresponding to the increase shown this year.

A large crop is looked for in the Northwest Provinces. Owing to favorable weather last Fall much good land was prepared, perhaps better than ever before. Crop conditions existing now are particularly good in Manitoba, and, speaking generally, throughout Alberta and Saskatchewan, as in the latter Provinces the dry weather [illegible] sections was followed by excellent rains [illegible] crop is yet young, and much may happen between now and harvest time. Estimates vary as to the amount of acreage under cultivation. I think it will be found that the wheat area is more or less unchanged, the flax acreage showing a decrease and the oats and barley an increase. A most interesting change is now taking place in Western farming [illegible]. Formerly districts that were [illegible] the wheat crop, are now developing into mixed farming, one of the results of which is that the West, which [illegible] were importers of hogs, are now exporters, but the number of hogs which are being shipped east at the present is small compared to the figures that should be reached within a reasonable time.

The general business outlook may be regarded as somewhat more cheerful. The action of the House of Parliament in passing both the Canadian Northern Railway and the Grand Trunk Pacific Company [illegible] loans, which should permit them to [illegible] construction of their lines, [illegible] approval, and has already [illegible] for steel rails being given, which will be [illegible] orders for equipment.

Provincial and Municipal [illegible] has now reached such a stage as to [illegible] on the opening of new branches. [illegible] in which we have the greatest [illegible] almost three times as great as a year ago.

THE LATE PRESIDENT

In addressing you a year ago to-day it was my duty to announce the retirement of the then President, Mr. Eugene O'Keefe, owing to ill-health. Mr. O'Keefe was intimately connected with the Institution from its inception. He passed away in October last, and before moving the adoption of the Report, I wish to express on behalf of the Board of Directors

---

Statement of the Result of the Business of the Bank for the Year Ending 31st May, 1914.

		$13,682,054.21

tors, our feelings of sorrow at the loss of our late colleague, in which I am sure all the Shareholders join.

On motion the thanks of the Shareholders were extended to the President, Vice-President and Directors, also to the General Manager and the other officers of the staff.

THE NEEDS OF THE WEST.

Mr. John Kennedy, of Winnipeg, one of the Western Directors of the Home Bank, and also a Director of the Grain Growers' Grain Company, spoke upon the financial conditions in the West, and made a strong appeal, directed not only to the management of the Home Bank, but to Canadian banks in general, calling attention to the urgent need for establishing methods whereby farmers in the West might secure an advance of 50 per cent. on their grain, so that they would not be under the necessity of rushing it into the world's market in vast quantities in order to secure ready funds with which to pay their debts and maintain their farms. He quoted authoritative statistics, proving that 75 per cent. of last year's grain crop in the Northwest was dumped into the market in three months, causing the price to drop 7 cents per bushel.

"When I state that last Fall showed the clearest truth of this, I do not do so without having figures to prove that this was the case," said Mr. Kennedy. "You will find that No. 1 northern wheat, about the beginning of last September, was worth about 88 cents in store in Fort William or Port Arthur, but by the middle of October, owing to the tremendous receipts, prices had fallen to about 78 cents, a drop of 10 cents a bushel, while world wheat conditions did not warrant any such decline."

ADVANCES ON GRAIN

Mr. Kennedy proposed as a remedy for this condition that the Banks advance to farmers in the Northwest loans to the value of 50 per cent. upon the grain stored in their barns. This plan for relief would necessitate the adoption of some cheap and safe method of storage, so that the bank's security would be [illegible]. He did not think that lending money in this way would require the issue of any additional capital, or necessitate a change in the established methods of finance, and the accommodation would save several millions of dollars a year to the country. The adoption of mixed farming he did not consider would give immediate relief. "The farmers are getting into mixed farming," Mr. Kennedy declared, "just as fast as they can afford to do so, and just as fast as it is good for them to do so, therefore of necessity for years to come wheat growing will be the mainstay of the West."

In conclusion, Mr. Kennedy assured the meeting that the "Home Bank" had become a household word in thousands of western homes.

APPOINTMENT OF AUDITOR.

The Chairman reported that in accordance with the provisions of Section No. 50 of the Bank Act, notice had been sent to the Shareholders that the Honorable Alexander McCall had given written notice of intention to nominate at the Annual General Meeting of the Home Bank of Canada, Mr. Sydney H. Jones, of Toronto, as Auditor.

It was then moved by the Hon. Alex. McCall, and seconded by Dr. J. A. Todd—That Mr. Sydney H. Jones be and is hereby appointed Auditor of the Bank, to hold office until the next Annual General Meeting, at a remuneration not to exceed $2,000.

ELECTION OF DIRECTORS.

The scrutineers declared the following gentlemen duly elected Directors for the ensuing year:—

Messrs. Thomas A. Crerar, Thomas Flynn, E. G. Gooderham, John Kennedy, A. Claude Macdonell, K.C., M.P., Col. the Hon. James Mason, C. B. McNaught, John Persse.

At a subsequent meeting of the new Board, held immediately after the adjournment of the General Meeting, Colonel the Honorable James Mason was re-elected President, and Mr. Thos. Flynn was re-elected Vice-President of the Bank. (Advertisement.)

SCHOOL BONDS AWARDED

The following Alberta and Saskatchewan school debentures have been awarded to the Alberta School Supply Company, Edmonton, during the last two months:—

Alberta and Saskatchewan Schools.—Avon S.D., No. 3091, Saskatchewan, $[illegible] per cent., 10 years, 18 months. [illegible] S.D., No. [illegible], Saskatchewan, $1,[illegible], 7 per cent., 10 years, 18 months. [illegible] S.D., No. [illegible], Alberta, $1,[illegible], 8 per cent., 10 years, 6 months. [illegible] S.D., No. 1142, Saskatchewan, $1,[illegible] per cent., 10 years, 18 months. [illegible] S.D., No. 137, Saskatchewan, $[illegible] per cent., [illegible] years, 12 months. [illegible]

LA COMPAGNIE DE PULPE DE CHICOUTIMI

Ten years' production satisfactorily sold and a profit of $160,270 on last year's operations are pleasing features in the fifteenth annual report of La Compagnie de Pulpe de Chicoutimi. To the year's profit was added $95,586 carried to the general balance sheet on the 1st January, 1913, and this amount, less the dividend for year 1912, $60,000, left $1[illegible]5,8[illegible], which was dealt with as follows: bond interest, $68,000; sinking fund, $23,267; interest on advances, etc., $[illegible]7,4[illegible]; directors' fees for year 1913, $3,500; bad debts, $316, the sum of $[illegible]2,448 being carried forward.

The company's fixed assets are valued at $3,834,652. Current assets include pulpwood valued at $109,746, and pulp, $[illegible], the total assets being $4,723,384. The sum of $[illegible] for maintenance and renewals was charged to the revenue account.

The company's officers and directors are: Honorable N. Garneau, president; [illegible] Lemoine, vice-president; Ray. Belleau, secretary; [illegible] Dubuc, Dr. J. A. Couture, F. X. Gosselin, [illegible] Cloutier.

$5 taken as equivalent of £1 sterling.	$40,845,950

HEAD OFFICE FOR CANADA - MONTREAL

ROBERT W. TYRE, Manager

HOME BANK

The satisfactory annual report of the Home Bank shows net profits of $192,442, or 10 per cent. upon the paid-up capital. The bank's rest account has been brought up to one-third of the capital and $65,000 has been written off premises, and a pension system established with $10,000 as a nucleus fund.

In common with most financial institutions the bank shows a slight falling off in deposits, which the president in his address explained was due to the withdrawal of some temporary deposits in current account at the close of the previous fiscal year, the nature of which are well known in financial circles. The number of accounts, however, showed an increase, and there was a gain in savings deposits.

Senator Mason, in his address, made the following interesting statements regarding a bank's circulation in Canada. In common with most other banks, the note circulation shows a reduction. This may be attributed to various causes, the most important of which was the early marketing of the grain crops in the Northwest.

The weather last year was particularly favorable to the harvesting and marketing of the crop, so that a larger proportion was handled before the close of navigation than in any previous season of recent years. In addition, owing to the general financial conditions which prevailed during the latter part of 1913, considerable pressure was brought to bear by creditors upon farmers for the early payment of their obligations. This resulted in a larger percentage than formerly of grain going forward with instructions to sell. As a result, circulation paid to farmers showed a decided falling off in [illegible] after the close of navigation. And the [illegible] for the [illegible] months—December to March—recorded a continued redemption of bank notes without the usual opportunity [illegible] from the marketing of grain through the [illegible]. The reduction from the high point in N[illegible] to the figures on the [illegible] of March, 1914, [illegible] while in former years the average [illegible] was approximately [illegible]. The [illegible] Merchants and manufacturers did not transact as much business as during the previous year. Railway earnings from the 1st of July, 1913, to May 31st, 1914, showed a decrease of over ten million dollars. The consequent shrinkage in circulation was mainly attributed to these principal causes, but Senator Mason added that the Home Bank is making arrangements which should not in future leave it dependent upon any one source to maintain its circulation at a high level.

As regarding the bank's operations in western Canada, Mr. John Kennedy, of Winnipeg, a well-known western director of the Home Bank and of the Grain Growers' Grain Company, when speaking upon the financial conditions in the west, made a strong appeal, directed not only to the management of the Home Bank, but to Canadian banks in general, calling attention to the urgent need for establishing methods whereby farmers in the west might secure an advance of 50 per cent. on their grain, so that they would not be under the necessity of rushing it into the world's market in vast quantities in order to secure ready funds with which to pay their debts and maintain their farms, which methods he suggested would save millions of dollars annually to the country.

◆

MAY RAILWAY EARNINGS

The Canadian Pacific Railway's May figures are: Gross earnings, $9,795,029; working expenses, $6,832,817; net profits, $[illegible]. For eleven months ended May 31st, 1914, the figures are as follows: Gross earnings, $119,760,403; working expenses, $89,670,100; net profits, $30,090,303. In May, 1913, net profits were $3,504,030, and for eleven months ended May 31st, 1913, net profits were $42,618,120. The loss in net profits is therefore for May, $541,018, and for eleven months ended May 31st, $12,527,817.

The Grand Trunk May statement shows net profits as follows: Grand Trunk proper, decrease, £28,300; Grand Trunk Western, decrease, £15,200; Grand Haven, increase, £1,700; Canada Atlantic, decrease, £9,300; whole system, decrease, £51,100. One working day less.

Chicoutimi Pulp Company

Annual General Meeting held on June 20th, 1914

Directors' Report

To the Shareholders of **Chicoutimi Pulp Company**

The Board of Directors has the honor to submit its fifteenth annual report with a statement of the Assets and Liabilities, and of the Profit and Loss account for the year ended on the 31st December, 1913.

The Net Profits of the year amount to		$160,279.54
To this amount, we add .... carried to the General Balance Sheet on the 1st January, 1913.	$95,586.80	
Less Dividend for year 1912	60,000.00	35,586.80
leaving a total of		$195,866.34
Which has been dealt with as follows:		
Bond Interest	$58,900.00	
Sinking Fund	23,267.34	
Interest on advance, etc	37,433.74	
Directors' fees for year 1913	3,500.00	
Bad debts	316.53	123,417.61
Leaving to be carried forward		$72,448.73

During the past year, we have put into operation the largest part of Mill No. 1, as enlarged. The improvements are now completed and said Mill can now produce daily 140 tons of pulp, dry weight.

Mill No 2 is in excellent order and can produce daily 120 tons of pulp, dry weight.

The two mills are perfectly equipped and the machinery is the most improved obtainable to-day.

The total production of our mills has been sold for ten years at a price slightly in excess to that of the last few years.

No notice has been taken of depreciation, the considerable sum of $71,497.14 for maintenance and renewals having been charged to the Revenue Account.

The term of office of the Auditors, Messrs. George A. Touche & Company, Chartered Accountants, is expired, and these gentlemen retire and offer themselves for re-election.

It is a pleasure for us to be able to express our appreciation of the zeal and intelligence with which the officers and other employees of the Company have fulfilled their respective duties.

Respectfully submitted,

N. GARNEAU, President.

Auditors' Report

TO THE SHAREHOLDERS

The Chicoutimi Pulp Company

We have examined the Books and Accounts of the Chicoutimi Pulp Company (La Compagnie de Pulpe de Chicoutimi) for the year ended 31st December, 1913. The Inventories of Pulpwood, Supplies, Stores, etc., have been valued at or below cost, but the Pulp lying at the Wharf, as per certificate of The Chicoutimi Port Company, has been valued at net contract price. No provision has been made for Depreciation on Fixed Assets but $71,497.14 has been charged to Revenue in respect of Repairs and Renewals. The transaction for the acquisition of the controlling interest in La Compagnie Générale du Port de Chicoutimi was not completed at 31st December, 1913, but has since been carried through. Subject to the above, we certify that in our opinion the Balance Sheet attached hereto is properly drawn up so as to exhibit a true and correct view of the affairs of the Company at 31st December, 1913.

GEORGE A. TOUCHE & COMPANY,
Auditors

Montreal, April 23rd, 1914.

DIVIDENDS AND NOTICES

Timber Concessions in the Province of Quebec

Notice is given by the Government of the Province of Quebec that, on the 11th of August and on the 20th of October 1914, permits to cut timber on over 8,000 square miles of crown lands will be offered at public auction.

The territory to be disposed of comprises some 1200 square miles in the basins of rivers Ottawa, Harricana and Bell, in the Abitibi region; 6,000 square miles in the Lake St. John northern region; 350 square miles in the Lake St. John East agency; 242 square miles in the Matapedia division.

On the first date above mentioned, permits will be offered at ordinary conditions on some 3,000 square miles.

The timber grants advertised for the 20th of October, comprising the basins of three large rivers in the Lake St. John region with considerable water powers, will be subject to the obligation of manufacturing the wood into pulp or paper within the Province of Quebec.

For particulars, please apply to the Department of Lands and Forests, Quebec, Canada.

ELZ. MIVILLE DECHÊNE
Deputy-Minister of Lands and Forests.

Quebec, 11th April, 1914.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A Dividend of two per cent. on the Preferred and one and one-half per cent. on the Ordinary shares of the Company, for the quarter ending June 30th, 1914, has been declared payable July 15th, 1914, to shareholders of record of June 30th, 1914.

By order of the Directors,
THOMAS GREEN,
Cashier.

New Glasgow, N.S.,
June 25th, 1914.

THE MERCHANTS BANK OF CANADA

QUARTERLY DIVIDEND

Notice is hereby given that a dividend of Two and one-half per cent. for the current quarter, being at the rate of Ten per cent. per annum, upon the Paid-up Capital Stock of this Institution, has been declared, and will be payable at its Banking House in this city and at its Branches, on and after the 1st day of August next, to Shareholders of record at the close of business on the 15th day of July.

By order of the Board,
E. F. HEBDEN,
General Manager.

Montreal, [illegible]th June, 1914.

PENMANS LIMITED

DIVIDEND NOTICE

A quarterly dividend of 1½ per cent. on the Preferred Shares of the Capital Stock of the Company has been declared, payable August 1st, 1914, to Shareholders of record of July 21st, 1914; also a quarterly dividend of 1 per cent. on the Common Shares of the Capital Stock of this Company has been declared, payable August 15th, 1914, to Shareholders of record of August 5th, 1914.

By order of the Board,
C. B. ROBINSON,
Secretary-Treasurer.

Montreal, June [illegible]th, 1914.

DEBENTURES FOR SALE

DEBENTURES FOR SALE

BROADVIEW, SASK.

Sealed Tenders addressed to the undersigned will be received up to six o'clock on the 20th day of July, 1914, for the purchase of $18,000.00 debentures for the installation of a Gas-Producer Electric Light Plant. The debentures bear interest at 6 per cent., and are repayable in fifteen equal annual instalments of principal and interest (viz., $1,853.33).

The highest or any tender not necessarily accepted.

A. SINCLAIR,
Sec.-Treas.

NORTHERN CROWN BANK

The Northern Crown Bank statement for the half-year to May 30th shows net profits of $107,905. Balance carried forward is $115,306. Deposits amount to $12,616,412, and specie and legal tender holdings to $1,281,469.

◆

NORTHERN ASSURANCE COMPANY

A gross premium income last year of $819,318 in Canada was achieved by the well-known Scottish company, the Northern Assurance Company. Mr. R. W. Tyre, Montreal, directs this company's business in Canada, and from its annual report it will be seen that the company's fire department received total premiums amounting to $6,300,185, an increase of $77,865. Losses were equivalent to $51.5 per cent. of premiums being $[illegible],241,015, and expenses of management were $[illegible],480. The total funds of the company amount to $[illegible], of which $26,8[illegible]0,845 are life and annuity. The fire reserve fund stands at $[illegible],000, and the profit and loss balance $1,341,455.

◆

The July bond list of Messrs. A. E. Ames and Company, Toronto, says: "The quietness in commercial business is, as evidenced by recent bank statements, producing important accumulation of moneys by large financial institutions, which in turn must tend to lower interest rates and likewise decrease the interest yield on the better class of investment [illegible]."

Financing Moving Pictures is a Big Task

FILMS COST HEAVILY BUT BIG DIVIDENDS HAVE BEEN PAID — NECESSITY OF CAPITAL RESERVE

CONSIDERING the rapid growth of the moving picture theatre as a factor in amusement, the investor has not been asked, yet, to subscribe to the securities issued in connection with very many of the companies interested. There are apparently considerable profits in the business, and, although competition has become keen, large dividends still appear to be paid. The cost of obtaining attractive films is high. From $250,000 to $350,000 may be invested in making a first picture film. "Quo Vadis," it is said, cost $280,000. Then it was manifolded into 400 copies of 8,000 feet each and sold at 25 cents a foot, or $800,000. A moving picture is good without translation in every language, and has just as good a market in South America and Australia as in France and Germany. To put the drama of "Atlantis" into moving pictures, the makers chartered a steamer of 12,000 tons and sent it to Iceland with a crew and a company of 400 to produce the picture at a cost of $225,000. To put Forbes-Robertson as Hamlet on the film cost at least ten times what it ever cost to stage any Hamlet that was ever presented. The makers thereof paid $75,000 for the use of a castle and costumed about 400 people therein, making the manufacturing cost $250,000, but they sold 3,000,000 feet of that film for 25 cents a foot.

Early this year were noticed the first signs of the process of interesting the investor to a greater extent in the moving picture industry. The Associated Provincial Picture Houses made a public issue in England; the Mutual Film Corporation was financed by members of the New York Stock Exchange; an offering of preferred stock with a bonus of common of the Reliance Company was sold privately by a Wall Street house; and Canada followed suit with an offering of $300,000 7 per cent. cumulative preference shares at par with a bonus of 100 per cent. in common stock, of the United Motion Picture Theatres, Limited. The object of the Associated Provincial Houses, with capital of £500,000, and which offered to the British investor 400,000 ordinary shares and 100,000 non-cumulative, non-participating 6 per cent. preference shares at par, was to acquire properties in Great Britain, and to erect thereon and operate cinematograph theatres and cafés, and to purchase from a parent company one freehold property and options to buy and lease eight other properties, for which the vendors receive £54,467 in cash and shares. The new company also secured other options, and intends to open at least 25 theatres. The Provincial Company, which in three years has paid dividends aggregating 50 per cent. on its ordinary shares, will direct and manage the new company, and in addition to its payment for administration, it will receive remuneration of 10 per cent. on the net profits after providing for preference dividends.

Commenting on this issue, the London Statist said: "Though the capital is said to be safely invested in real estate, many of the properties are mortgaged, and the company will start out on its ambitious career with nothing substantial on which to fall back for raising money, if need arises. If the Provincial directors wished to expand their business, it is a pity they did not increase their capital, instead of floating another company. It would have been a surer guarantee of their confidence in cinematographs if they had pursued their policy of forming a single large organization whereby, as they pointed out, the cost of operation would be reduced to a minimum. The estimated profits on the ordinary shares are put at 25 per cent., and this, backed by the past success of the parent company, will, no doubt, offer a pleasant bait to those speculators who like to gamble in unproductive ventures which cater for fleeting popular crazes. If the directors' hopes are realized and big dividends are paid, shareholders would be well advised to build up a capital reserve with their profits against rainy days, or possibly, in this case against fine days with empty cinematograph houses."

The Mutual Film Corporation was organized under Virginia laws in April, 1912, with $1,700,000 common and $800,000 7 per cent. cumulative preferred stock authorized. Of the former, about $1,550,000 is outstanding and of the latter, $650,000. The preferred, selling at about 75, has paid its 7 per cent. since organization, and six months after incorporation the common, which was bonus stock, began dividends of 1 per cent. monthly. This is still being paid in the form of ½ per cent. regular and ½ per cent. extra. The common dividend for the next three months has just been declared in advance. The junior shares are quoted at 80 notwithstanding the 12 per cent. annual dividend.

The Reliance Company has $200,000 7 per cent. cumulative preferred and $800,000 common. It was intended to make a public offering of the preferred with a bonus of common, but all of the issue was disposed of at private sale by Livingston & Company. J. P. Dunning, formerly vice-president of the Corn Exchange Bank, is treasurer of the Reliance Company. The New York Motion Picture Company has $1,000,000 of stock of one class and pays dividends of 2 per cent. monthly, or 24 per cent. a year. The shares sell at 100. The Biograph Company, formed in 1905 under New Jersey laws, was one of the first of the moving picture makers to sell stock to the public, although it is not widely known. Most of the producers are close corporations with ten or a dozen stockholders.

In the case of the Canadian company mentioned above, the objects were to consolidate moving picture theatres in Buffalo, Montreal, Ottawa and Toronto. The prospectus stated that the companies amalgamating were "all making handsome profits." A striking feature of the amalgamation was that the people selling their interests in the component companies took payment therefor entirely in shares of the new company and got no cash out of the transaction. The prospectus further stated:—

"The business is a cash business. Every class in the land contributes. This applies most strongly to the working classes, as this particular form of amusement is the only thing outside of the necessities of life on which practically all of those comprising the masses regularly spend a portion of their earnings. It is unnecessary to dilate upon the extraordinary profits made by these theatres."

In a letter from the president of the company to the brokers offering the stock, the following statement was made: "The auditors calculate that we have total earnings applicable to the holdings of the company at the rate of $101,773.34. I place as a conservative estimate of the probable earnings of the $300,000 to be obtained under the present issue when this money has been fully invested in new enterprises $100,000 per annum. The total should then amount to approximately $200,000, and as the preferred dividend on the $630,000 preferred stock now being issued will be $44,100 per annum, this would leave a net profit of approximately $156,000, or 13 per cent. on the common stock issued. It is the intention to provide a reserve fund to be used in the redemption of the preference shares in the discretion of the directors, and a reasonable proportion of the above net profits could be utilized in this manner, the balance being available for dividends on common stock."

Moving picture company stocks may yet become the centre of exciting speculation. Investors should, however, reflect seriously upon the changing appetite of the amusement-loving public, remembering at the same time the lessons learned from speculative gallops into the wireless telegraph, oil, skating rink, and mining stock arena.

CANADA INTERESTED IN AUSTRALIA'S TRADE

Interstate Commission's Powers — What Has to Be Investigated

The Australian Interstate Commission has been made the subject of a report by Canadian Trade Commissioner D. H. Ross, as a result of Canadian enquiries, which in part is as follows:—The commission is composed of a chief commissioner and two other commissioners, the former being a lawyer, while the others are respectively an engineer and a former comptroller-general of customs who is a recognized expert on tariff matters.

To facilitate investigation, in regard to tariff revision, special confidential forms are set out enumerating a comprehensive series of questions which must be completed by applicants soliciting amendments of the existing tariff—either for increases or decreases—and accompanied by a statutory declaration.

General Application Form.

Established industries must set out in detail particulars respecting the capital, value of plant, raw material used, and the number of and wages paid to employees. Prospective industries are required to submit estimates in relation to the capital, plant and employees, etc., to be engaged, should sufficient protection be granted by parliament. In both instances, information is desired respecting imported goods of similar character, the rate of wages paid by oversea manufacturers, and evidence is solicited in regard to the articles being exported to Australia at less than the fair market value at which they are sold in the country of production (otherwise "dumping").

The general application form may be filled in for (1) the abolition or reduction of present duties, (2) to oppose suggested increases, (3) to seek extension of preference provisions, (4) in regard to the excise tariff, (5) for assistance by bounty, (6) for assistance by export duty, etc.

In addition to the written application for amendments to the tariff, all applicants are closely examined and cross-questioned by the commissioners as to the merits of the representations made. Where there is suspicion of manufacturers (who made application for higher duties) having combined for the purpose of [illegible] prices to distributing houses or consumers, [illegible] has been most [illegible].

The commission is entrusted with the duty of investigating, from time to time, all matters which in the opinion of the commission ought in the public interest to be investigated affecting (a) the production of and trade in commodities; (b) the encouragement, improvement and extension of Australian industries and manufactures; (c) markets outside Australia, and the opening up of external trade generally; (d) the effect and operation of any tariff Act or other legislation of the Commonwealth in regard to revenue, Australian manufactures, and industry and trade generally; (e) prices of commodities; (f) profits of trade and manufacture; (g) wages and social and industrial conditions; (h) labor, employment, and unemployment; (i) bounties paid by foreign countries to encourage shipping or export trade; (j) population; (k) immigration; and (l) other matters referred to the commission by either house of the parliament, by resolution, for investigation.

Under a section of the act appointing this body, the commission is empowered to investigate all matters affecting the use of river waters where such rivers, by themselves or by their connection with other waters, constitute highways for inter-state trade and commerce, and may also investigate any legislation of the Commonwealth abridging the rights of any state to the reasonable usage of the water of any of the rivers for conservation or irrigation, and the violation by any state or its people of the rights of any other state in these respects. Under other provisions, the powers of the commission are made to cover all proposed diversions from any rivers, and their effect upon the navigability of such rivers as constitute inter-state highways.

DOMINION BRIDGE COMPANY.

Monetary Times Office,

Montreal, July 7th.

An official of the Dominion Bridge Company denies a report which was in circulation during the week to the effect that the company proposed closing its plant during the month of July. He states that there is no intention on the part of the management of closing a single department, even temporarily, and that no men are being laid off for several months.

Dominion Bridge has not been very active on the exchange for some time. About the middle of last week a broken lot sold at 109½, as compared with the last previous board lot sale at 111. It is possible that somebody was trying to find an explanation for the weakness in the stock.

It is generally considered here that a falling off in the activity at the bridge works and other structural and iron and steel companies need not occasion great surprise, inasmuch as railway construction has undoubtedly fallen off in a marked manner and this will affect firms of the character under discussion.

BANK BRANCHES OPENED AND CLOSED

During May 51 branches of Canadian chartered banks were opened and fourteen closed. Since January 1st, 1914, there have been 140 branches opened and 40 closed. Houston's Bank Directory gives the following particulars for May:—

Branches Opened—51

Admiral, Sask.	Canadian Bank of Commerce.
Albertine, N.B.	Banque Provinciale du Canada.
Berlin, Ont. (opened 22nd June)	Bank of Montreal.

Rougemont Station, Que.	La Banque Nationale
St. Clet, Que.	Banque d'Hochelaga.
St. Thecle, Que.	La Banque Nationale.
Wolseley, Sask.	Northern Crown Bank.

◆

CONSERVING TIMBER IN ALGONQUIN PARK.

The Ontario government [illegible] ago entered upon a policy of conserving the timber resources of the province, and naturally their eyes were turned in the direction of Algonquin Park to see what could be done to bring back into the Crown free from any private control by timber license or otherwise certain areas which had been cut over or partly cut over.

In pursuance of this idea the Crown purchased from the Munn Lumber Company its rights to licensed territory covering [illegible] square miles almost entirely within the park, for which the sum of $[illegible] was paid. At the time the park was set apart originally nothing had much value except the pine, as the region was remote from railway connection, hardwoods were not in demand, and hemlock and spruce were not in demand, so that pine was really the only timber of value. Since then railways have pierced the park and [illegible] timber has taken on a considerable value, and there is every reason to expect that all varieties of timber in the park will greatly increase in value in the future. There are large quantities of birch, hemlock, [illegible] and [illegible], which are valuable [illegible] for chemical purposes [illegible] plant in process of erection near the park, which will no doubt reach out for supplies of timber [illegible] and if a [illegible] of this kind were to operate in the park the ground would be [illegible] cutting [illegible].

It was considered a great boon to purchase the Munn Lumber Company's limit, because devastation was threatened [illegible] timber down [illegible] which would have [illegible] and it might as well have been [illegible].

Mr. [illegible] White, deputy minister of lands and forests, expressed in his report the opinion that every effort should [illegible] the timber in the park [illegible] obtained at equitable [illegible].

[illegible] have expressed their willingness to [illegible] at reasonable prices, the [illegible] Company, Messrs. Gilles Brothers, and [illegible] Lumber Company.

RECENT FIRES

Monetary Times' Weekly Register of Fire Losses and Insurance

Chipman, N.B.—June [illegible]—Mr. F. D. Fulton's residence. Loss, $4,000. Cause unknown.

Bolton, Ont.—July 4—Mr. W. Dick's foundry. Loss unknown. Partly insured. Cause unknown.

Windsor, Ont.—July 5—Manufacturers' Hotel at Ford. Loss unknown. Cause, supposed crossed wires.

New Westminster, B.C.—June 26—Pacific Chocolate Company, Front Street. Loss, $50,000. Cause unknown.

Petrolia, Ont.—July 7—Mr. J. Bell's flour and feed store, Main Street. Insured. Cause, probably boys smoking.

Murray Bay, Que.—July 3—Mrs. E. Blake's cottage, Pointe Aupic. Loss unknown. Cause, defective chimney.

Manville, Alta.—July 3—Business section. Loss, $40,000. Mr. J. B. Burch was heaviest loser. Cause unknown.

Brandon, Man.—June 29—Patterson farm, 12 miles west of Brandon, owned by Mr. J. G. McGregor. Loss, $2,500. Cause unknown.

Vancouver, B.C.—July 3—A. Cotton and Company's dry kiln and moulding factory, 6th Avenue and Birch Street. Loss, $15,000. Cause unknown.

Bridgewater, N.S.—June 28—Kent Lumber Company's sawmill, Gold River, Lunenburg. Loss, $20,000. Insurance, $12,000. Cause, supposed spark.

Langham, Sask.—July 2—P. Wiebe's flour mill and National elevator. Loss, flour mill, $35,000. Insurance, $5,000. Loss, elevator, $5,000. Cause unknown.

Toronto, Ont.—Fire Chief Thompson's report for the week ended June 30th, shows the following losses:

June 24—Three brick buildings, occupied by Harbord Street Collegiate, owned by board of education of city of Toronto. Cause, electric wires struck by lightning. Loss, buildings, $50.

June 25—Frame building, owned and occupied by Marg. Mackey, 24 Indian Road Crescent. Cause unknown. Loss, building, $250; dwelling, occupied by Wm. Cass, 99 Seaton Street, owned by John Kidd. Cause unknown. Loss, contents, $150; building, $200; three brick buildings, occupied by J. W. Miller, 1431 Queen Street West, owned by Wise, Miller and McKenzie. Cause unknown. Loss, contents, $100; building, $100.

June 26—Three brick buildings, occupied by Miss E. A. Dwyer, 985 Dundas Street, owned by T. H. Webb. Cause, spontaneous combustion. Loss, building, $50; store and dwelling owned and occupied by K. Kosky, 98; Gerrard Street East. Cause, lighted candle upset. Loss, contents, $50.

June 27—Brick building, occupied by Abraham Merrick, Mrs. Davidson, Mrs. Campbell, Mrs. Bradley, 155 Queen Street West, owned by Louis Brown. Cause unknown. Loss, contents, $1[illegible], $25, $25, $25; building, $100; store and dwelling, occupied by Maurice Magnen, 15 Arthur Street, owned by R. Rifkin. Cause unknown. Loss, contents, $75; building, $50.

June 28—Auto. No. 74 8, owned by Heintzman and Company, [illegible] Yonge Street. Cause, short circuit in motor. Loss, $[illegible].

June 29—Store and dwelling, occupied by H. T. Bannister, 735 Queen Street East, owned by G. Manson. Cause, [illegible] stove. Loss, contents, $1[illegible]; building, $5[illegible].

June [illegible]—Brick building, occupied by A. Barrett, 227 [illegible] Avenue, owned by [illegible] Keith. Cause unknown. Loss, [illegible] $[illegible]; building, $[illegible].

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED.

The following [illegible] adjusted by [illegible] S. R[illegible], [illegible]

Victoria, B.C.—May [illegible]—Apartment block, owned by H. T. [illegible]. Loss, building, $1,[illegible] [illegible] Phoenix of London.

Sperling, B.C.—May 21—Farm dwelling, owned by Helene Comae. Cause, bush fire. Loss, contents, $400; building, $1,500. Insurance, building, $1,000 in Imperial Underwriters.

Stump Lake, B.C.—May 2—Dwelling, owned and occupied by T. G. McBride. Cause, sparks from chimney. Loss, contents, $500; building, $1,000. Insurance, building, $1,000 in Westchester Fire Insurance Company.

North Vancouver, B.C.—May 11—Bakery and dwelling, owned and occupied by Barnes and Eddie. Cause, stove pipe too near partition. Loss, contents, $[illegible]50; building, $655. Insurance, contents, $1,[illegible]50; building, $1,000 in Fireman's Fund Insurance Company.

Duncan, B.C.—May 5—Dwelling, occupied by J. Peters, owned by L. H. Hogan. Cause, coal oil stove. Loss, contents, $2,500; building, $3,000. Insurance, contents, $1,000 in Royal Exchange Assurance, $1,000 in Liverpool and London and Globe; building, $3,500 in Liverpool and London and Globe.

Near Misson, B.C.—April 18—Farm dwelling, occupied by Harold Kenworthy, owned by Hatzic Prairie Company, Limited. Cause, supposed from furnace. Loss, contents, $8,000; building, $6,000. Insurance, contents, $1,500; building, $4,200 in Liverpool and London and Globe; contents, $4,000 in London and Lancashire.

Port Moody, B.C.—Sawmill, owned and occupied by Canadian Pacific Lumber Company. Cause, friction in drive belt. Loss, contents, $700; building, $390. Insurance, $10,500 in Boston Insurance Company, $29,499 in Excess, $27,000 State of Pennsylvania, $15,000 Lloyds, London, $178,501 Lumbermen's Indemnity Exchange, $15,000 Lumber Insurance Company, $2,500 Merchants Fire Insurance Company, $10,000 Midland and Textile Insurance Company, $11,000 North River Insurance Company, $9,000 Pacific Fire Insurance Company.

BRITISH EMPIRE TRUST

The remarks [illegible] by Mr. R. M. Horne Payne and other gentlemen at the thirteenth annual meeting of the British Empire Trust Company, Limited, show that they expect the passing of depression and that development in Canada will gradually gain its onward momentum, benefiting this company, which has gained a progressive position in Canadian financial circles. The needs of Canada were pointed out by Mr. R. M. Horne Payne, the chairman of the company, who, in referring to the immigration of people to Canada, said: "These people need houses to live in and every other facility required for sanitary and civilized life, including transportation for their produce and supplies. To provide [illegible] for great sums of money at a time of [illegible] and the money markets of the world did not render [illegible]." Mr. J. J. Reid, who was a recent visitor to Canada, [illegible] this phase, remarking, "The position [illegible] sound. We in England forget [illegible] Canada must borrow [illegible]."

From the [illegible], it [illegible] another [illegible] two investments of the company, [illegible] first mortgage debenture stock of the [illegible] Light and Power Company, and £27,210 [illegible] first mortgage debenture stock of the Canadian [illegible] Fisheries Company, which are on the books of [illegible] respectively, are causing [illegible] owing to political [illegible], and the latter to the reduced catch of [illegible]

THREE BILLIONS OF FIRE INSURANCE

Fire insurance companies doing business in Canada had a net amount at risk at the end of 1913 totaling $3,097,048,026, an increase of $413,000,000 over the preceding returns. This total is divided among the companies as follows:

British companies	$1,595,617,195
United States and other companies	816,928,624
Canadian companies	684,502,207

Gross cash premiums last year totaled $35,000,000, an increase of over $5,000,000. Of that sum over 50 per cent., or $15,699,429, went to British companies, while over one-third, or $10,117,316, went to Canadian companies, while United States and other companies are credited with $9,289,162.

Reinsurance and return premiums total $9,321,498, as compared with $7,082,234 for 1912. From the accompanying figures it will be seen that the net amount of losses incurred during 1913 by twenty-nine Canadian companies, twenty-four British, and thirty-one United States and foreign companies total $14,612,940, as compared with a loss of $11,855,713 in the previous year. According to the fire loss record of *The Monetary Times*, the total losses for the first six months of this year amount to $12,579,768, while in 1913 for the same period the losses were $14,325,463. During the ten years, 1903 to 1913, losses of Canadian companies pay grew from $1,209,678 to $3,008,979, while those paid by British companies grew from $3,803,764 to $6,939,451, and those of the United

States and other companies, which in 1903 were $2,365,140, and in 1904 were only $966,748, grew in 1913 to $4,043,674.

The gross amount of policies, new and renewed, last year was $2,869,015,975, compared with $2,374,161,732 in 1912 and $1,987,040,591 in 1911. Of the 1913 total, British companies secured $1,318,925; United States and other companies $837,438,895; and Canadian companies $712,651,986.

The following figures show the total premium and losses in Canada for the years 1869 to 1913 inclusive:

	Net cash premiums received	Losses paid.
Canadian companies	$81,[illegible]	$51,5[illegible]
British companies	[illegible]	14[illegible]
United States and other companies	[illegible]	[illegible]
Totals	$[illegible]	$[illegible]

The assets of the Canadian companies total almost $18,000,000; bonds and debentures occupy first position, being $7,014,700. Loans on real estate, $3,011,388; stocks, $2,301,257. Agents' balances and premiums outstanding amount to $1,880,13[illegible]. The total liabilities of these companies, not including capital stock, amount to approximately $8,100,000. The total assets in Canada of British fire insurance companies amount to $30,004,105. The largest item in these assets is loans on real estate totaling $12,770,448, and they hold real estate valued at $2,500,000. United States companies' chief asset is $6,313,268 invested in bonds and debentures. They hold no real estate and their total assets amount to $8,263,703.

FINANCIAL METROPOLIS IS KEEN IN ANALYSIS

(The following cable messages of the Canadian Associated Press and the Montreal Star are printed by special arrangement.)

WHAT IS LONDON'S ATTITUDE?

Brief Analysis of the Position Overseas As It Concerns Canada—Why Not Add a Department to the High Commissioner's Office?

(Staff Correspondence.)

London, June [illegible]

What is London's attitude to Canada? That was the particular question during this pilgrimage in the world's metropolis for which an answer has been sought on behalf of readers of *The Monetary Times*. First, we must know the character of financial London, a market of peculiar moods. It is keen in analysis and quick in deciding knotty points; but it is moody and sometimes erratic. Leaving aside technical interpretations, there is a market of two divisions, city financiers, bankers, underwriters, and the like, and the army of investors, institutional and individual, with eyes upon London's centre. The former are rather glum about stock exchange dullness, about international conditions, about domestic politics, and about Canada, too. The best authorities, however, recognize that fundamental conditions in the Dominion are sound. They think we have borrowed heavily enough. They want to see encouragement of freight sources for Canada's railroads, and an improvement in earnings. They desire more production and less speculation.

They are caustic in their criticisms of Canadian industrial flotations, in the aggregate, made in London during the past few years, having good reason to be. Industrial issues made by Canada in this market will likely get a frigid reception. Finally, while this section of the market has faith, it wants Canada at the present time, to keep out of London as far as possible.

Some Loans to Come.

This leads one to consider forthcoming issues. Toronto, Winnipeg, Moose Jaw and maybe Montreal will come to this market, some of them possibly before these lines reach Canada. The Canadian Northern must make a loan here, and so will the Grand Trunk Pacific. There are others, too, so that despite London's request for a rest, a procession of borrowers is in line. They will be well advised to wait, and other less urgent loans should be postponed for some time. That is the attitude of the powers that-be towards Canada.

As for the investors, they have little disposition to place their money other than in the banks, whose deposits have increased enormously in recent months. They have been bitten badly in many things, Canadian securities included. So far as Canada is concerned, they propose to wait until the present readjustment of affairs takes more definite shape. They want to see a more happy railroad and industrial situation, and a good crop this fall. Micawberlike, they are waiting to see what will turn up. In the meantime, a little investing is being done, but only a very little.

London Mud Throwers.

One nasty phase of the situation here is the disposition of market papers (of little repute, however), to indulge in some smart writing at the expense of Canada. The Dominion has been so much in the limelight in good times, that now dull stock market days are here, there is a disposition [illegible] Canada, some of the most prominent borrowers, making [illegible]. Here is a typical headline:—"Canadian [illegible] Rot in the Dominion." Under it was [illegible] lot of mischievous references, including one [illegible] in crime." This kind of stuff, while [illegible] naturally does a certain [illegible]

[illegible] Canadian High Commissioner in [illegible] to contradict every Tom, [illegible] nonsense regarding the Dominion [illegible] newspaper get into print [illegible] 'N[illegible].'' Every week from the office of the High Commissioner, which has quite enough Westminster atmosphere, is issued a circular with a few facts and figures. It has become so monotonous that several Canadian business men here throw it, without perusal, into the waste paper basket, and the press do not feature it.

A Suggestion for Ottawa.

Why not institute a department at the High Commissioner's office to fraternise with the English press, to give them the plain facts from day to day, rather than allow highly colored truth or friction to circulate as freely as it has in the past? For instance, on the financial page of a leading London paper the other day, the statement was made by an anonymous correspondent that "Canada is importing twice as much as she is exporting." That it would not have been out of place for a contradiction to have been issued over the signature of the Canadian High Commissioner, giving the facts and figures, is the opinion of Canadians here. A press department in connection with this important office in London is suggested to the authorities at Ottawa.

The Canadian banks in London have been doing yeoman service in protecting the English investor against unscrupulous schemes floated from Canada. Prospective investors in England will do well to consult them before parting with their savings. Their advice is unbiased and absolutely reliable.

Locomotive Firm Coming to Canada.

Universal satisfaction is expressed at the Knighthood of Canada's premier, and at the other Canadian honors granted on the King's birthday.

Considerable speculation is being indulged in as to who will be the next Canadian High Commissioner in London. Several names are mentioned. Some say that Sir Robert Borden may have had enough of the strenuous political life at Ottawa and will come over to London himself to fill the office.

Messrs. Nivison and Company, the firm of which Sir Robert Nivison, the new baronet, is the senior partner, act as brokers to more public loans than any other stock exchange firm, e.g., the following recent loans:—

Dominion of Canada	£5,000,000
New South Wales	3,000,000
Queensland	2,000,000
City of Montreal	1,500,000
City of Winnipeg	1,125,000
Port of London	1,000,000
Gisborne (N.Z.) Harbor Board	200,000

And the £4,000,000 South African loan is also being arranged by Messrs. Nivison and Company. All India stock issues are arranged by the firm, Mr. H. H. Scott, one of the partners, being official broker to the India Council.

Locomotive firms in Canada will be interested in knowing that "the largest locomotive makers" in Europe have almost decided to establish an extensive branch plant in Ontario.—Fred W. Field.

PREMIER CLASS COMPANY.

[illegible], July [illegible].—Mr. E. V. [illegible], Montreal, secretary of the Premier Glass Company of New [illegible], says the subscriptions have been returned, as the recent public issue was not as well received as had been hoped, owing to market conditions. Satisfactory arrangements have, however, been made on the other side. Capital has also been raised privately here sufficient to insure the success of the company's plant being completed and operations to begin in about two months' time.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Ottawa, Ont.—Tenders will be received up to August 14 for debentures totalling $1,155,950. (Official advertisement appears on another page.)

Vancouver, B.C.—Without a dissenting vote, Vancouver's civic finance committee endorsed the policy of submitting no money by-laws until next January.

Edmonton, Alta.—Tenders will be received by the bond branch of the department of education, Edmonton, up to July 26th, for the following debenture issues:—Redcliffe S.D., No. 2283, at 6 per cent. 20 years, $25,000. Bow Island S.D., No. 1883, 6 per cent. 5 years, $3,000. Three Hills, No. 3048, 6½ per cent. 5 years, $[illegible],500. Delburne S.D., No. 2919, 6½ per cent. 10 years, $4,000.

New Westminster, B.C.—City Treasurer Gilchrist's report for the year ended December 31st, 1913, shows in the general balance sheet assets totalling $6,965,386. The largest item being $4,689,597. This includes detailed inventory of lands, buildings, park sites, etc., and a general sinking fund of $62,132 and interest on debenture sinking fund of $14,041. The liabilities of the city include a bond debt of $4,595,500, less $866,706 not sold. The general revenue account shows an income of $753,555. The electric light department shows a credit balance of $33,261, and the waterworks a balance of $4,325.

Alberta S.D.—The following school districts have been authorized to borrow:—Edmonton, No. 7, $850. W. D. Bradey, Edmonton. Chipman, No. 1473, $2,500. J. J. Wuetherick, Chipman. Lumni, No. 2862, $1,200. Solomon Kaechele, Ghost Pine Creek. Brightwood, No. 2891, $1,200. Jos. F. Martin, Entwistle. Delburne, No. 2919, $4,000. A. T. Rowell, Delburne. Superba, No. 2984, $1,200. A. M. McQuarrie, Oyen. Kinear, No. 3004, $1,500. O. M. Leeper, Campbell Hill. Shoal Lake, No. 3006, $1,000. B. C. Fiscus, Burtonsville. Wenger's Heights, No. 3007, $1,500. I. S. Wenger, Oyen. Rockland, No. 3016, $5,000. B. O. Switzer, Box 474, Calgary. Rodino, No. 3034, $1,600. R. Macfarlane, Rodino. West Lethbridge Southern, No. 3038, $1,500. H. Wilkinson, Box 386, Lethbridge. Lewisville, No. 3041, $1,200. J. J. Gadd, Hardisty. Waterhole, No. 3055, $800. Aaron T. Gorton, Waterhole. Hillman, No. 3077, $1,000. Geo. M. Featherstone, Eunice. Carlyle, No. 3083, $1,500. D. W. Bohannon, Alsask, Sask. Willow Glen, No. 3084, $1,500. J. C. Walker, La Pearl. Fredensfelt, No. 3111, $1,200. H. W. Locken, Schuler. Derry, No. 3114, $1,200. D. M. Kennely, Ensign. Ridgepark, No. 3116, $1,500. O. F. Johnson, Vegreville.

Regina, Sask.—The following is a list of debenture applications granted by the Saskatchewan local government board and the applying treasurers:—

School Districts.—Readlyn, No. 3293, $1,000. H. R. Nicholson, Readlyn. Arbor Hill, No. 3270, $1,200. E. E. Mack, Bre[illegible]aylor. Bliss Lake, No. 3233, $1,200. Thos. J. Gamble, Dirt Hills. Stanisloff, No. 3105, $1,100. John Peace, Hubbard. Line Coulee, No. [illegible]17, $2,200. G. L. Huff, Govanlock. Round Valley, No. 2321, $10,000. J. M. Jensen, Unity. Level Prairie, No. 3185, $1,800. G. L. McLachlan, Abbey. Coteau Plains, No. 3224, $2,400. J. A. R. Tobin, Lause Valley. Mount Zion, No. 3183, $1,800. Walter Guthrie, Th[illegible]. Badger Mound, No. 3238, $2,000. Jos. Williams, Abbey.

Rural Municipalities.—Fairview, No. 258, $5,000. Frank Finley, Rosetown. Elmo, No. 291, $6,000. Sam Finley, D[illegible]r Lake.

Towns.—Biggar, $19,750. F. G. Squirrel, Biggar. Carlyle, $[illegible]. F. J. Stent, Carlyle.

The Saskatchewan local government board received applications from June [illegible]th to July [illegible]d, from three rural municipalities to authorize the borrowing of $10,700, of which amount the board granted $[illegible] and refused to authorize $8,700. One [illegible] applied to borrow $[illegible], and this is being investigated. [illegible] towns applied for authority to borrow $[illegible],748 and [illegible] $[illegible] to be borrowed, thus refusing to [illegible] $[illegible]. [illegible] school districts 14 applications were [illegible] amount being $[illegible]0,500. Ten were granted [illegible] $2[illegible], the remaining four requests [illegible] further investigated.

The Municipal Bond Market is continued on page 19.

COMPANIES INCREASING CAPITAL

The following companies in Ontario have increased their capital stock: Winnett & Wellinger, Limited, from $40,000 to $98,000. The German Printing and Publishing Company, of Berlin, Limited, from $10,000 to $90,900. United Fuel Supply Company, Limited, from $1,350,000 to $2,700,000.

◆

ALBERTA LAND COMPANY

The Alberta Land Company is a well-known corporation and is registered in London, England. It is largely interested in Port Arthur's development, and also in British Columbia, and has no connection of any kind with the companies bearing similar names which were affected by the Canadian Agency's failure. Mr. H. D'Arcy Hulton is manager at Port Arthur. From the year's operations of the Alberta Land Company pleasing net profits of $30,196 were made, this being equivalent to over 13 per cent. on the issued capital. With the amount brought forward from last year, the company had available for distribution $45,172. This was divided as follows:—Dividends, $13,828; share reserve account, $20,000; carried forward, $11,344. Sir Robert Gresley, chairman of the company, in his remarks at the annual meeting in London, referred to the fact that the younger and more progressive a country was the more it felt when the supply of capital, which is its life blood, is temporarily restricted. During the year the company acquired Port Arthur property valued at more than $120,000. The company includes a construction department in its activities, and last year netted $30,330 gross profits, and has contracts totalling $1,100,000 in hand.

In connection with the various subsidiary companies of the corporation, one, the Skeena River Fishing Company, has been formed with a Canadian board of directors, consisting of Messrs. H. Draney, Vancouver; E. C. Traves, New Westminster; and W. Armer Greenwood. The Alberta Land Company's total authorized capital is £60,000, and the capital issued amounts to £46,521.

◆

MONTREAL TRAMWAYS AND FRANCHISE.

Monetary Times Office,
Montreal, July 7th.

Tramways affairs are attracting attention in Montreal once more and from present appearances it will not be long now before something in the way of a new contract will be drawn up ready for discussion.

Issues of the tramways company have been showing marked strength on the Stock Exchange and this is being interpreted as being due to buying on the part of those who have good reason to think that negotiations are going ahead in a satisfactory manner. The company is asking for a 40-year franchise, it is generally understood, this having been made evident some time ago. With this exception, the public has not yet been made aware of terms or conditions and so far as known these have not been officially discussed.

The various securities have advanced several points in face of a generally unfavorably market and also in face of an adverse decision in a suit against one of the subsidiaries of the tramways and power company. The judgment ordering the Canadian Light and Power Company to pay the sum of $65,350 to Messrs. Fraser, Brace and Company, contractors, being the balance claimed on a contract for the construction of power plant and canal at St. Timothee. The power company claimed that the contractors had not completed their contract and claimed $253,000 as damages from them. This latter claim was dismissed, the judgment taking the attitude that the delay was caused by the power company and not by the contractors. The association between the Canadian Light and Power Company and the tramways company is through the fact that these two companies, together with a number of others, are in a holding company, known as the Tramways and Power Company, the stock of which is the principal trading stock in connection with the tramways company.

◆

Inquiries received at the Canadian National Exhibition offices, Toronto, from Iowa, Wisconsin and the prairie provinces, as well as from numerous near points, indicate that this will be the exhibition's greatest livestock year.

TRADE AND LOANS.

Using invested capital as a weapon for the obtention of trade or business is not a common practice. Great Britain has invested several hundred millions sterling throughout the world, as, for instance, £688,000,000 in the United States and £500,000,000 in Canada. Despite that fact, it has not used capital investments to any great extent as a magnet for business for British manufacturers. This was strikingly illustrated when the Japanese government sought a loan from British bankers in February, 1911. Sir Edward Holden, a leading banker, would have made the raising of this loan conditional upon the promise of more considerate treatment of free trade England's exports under the new Japanese tariff. Four millions sterling of the total loan of six millions were required for the following works in connection with the South Manchurian Railway, improvement of harbor works, increase of locomotive and rolling stock, extension of electric works, extension of gas works, etc.; that is to say, mainly for the purchase of engineering plant. The British bankers did not depart from their usual procedure in this instance, and the six millions sterling of British money was lent without so much as a bare word that British industry should be remembered when the plant required for those works was bought.

Especially has this British tradition held good in the case of Canada. It is interesting to consider the relation of British capital and Canadian trade. Great Britain and the United States are the Dominion's best markets. Figures extracted from the Ottawa [illegible] give the following results:

*Nine months.

In the eight years' period, therefore, while we sold to Great Britain $210,740,418 worth of goods more than we sold to the United States, we purchased from Great Britain $1,310,072,000 less than we purchased from the United States. In other words, Great Britain is giving us the better deal in its markets, and in return the United States is getting our best markets. This despite the fact that our borrowings in Great Britain have totalled $2,500,000,000, although, of course, geography is an important factor. The situation may be more closely analysed by taking the figures for the year 1913, when we sold Great Britain $177,000,000 worth of goods. In return, we purchased only $1[illegible],000,000 worth, leaving a difference in favor of Canada of $[illegible]8,000,000. During the same year we borrowed publicly $2[illegible]5,000,000 from Great Britain.

Taking our exports to and new capital received from Great Britain, amounting together to $412,000,000, and deducting our imports from Great Britain totalling $13[illegible],000,000, we were still indebted to the United Kingdom to the extent of $2[illegible],000,000. In the meantime, we purchased from the United States $455,000,000 worth of goods and sold them only $167,000,000. This may not [illegible] world, but the statistics are interesting

PREVENTION OF PANICS

The possible prevention of panics always makes a subject of interesting study. Those of comparatively recent years have not been as disastrous or as widespread as those of earlier times. This may be due largely to the interdependence of financial institutions the world over. The close relations of banking houses of every continent, yearly growing more intimate, make the possibility of panics more remote and their duration and intensity less. Mr. F. Faithfull Begg has gone further than some students of this subject, and in an address to the London chamber of commerce suggested the establishment of an international council of bankers for the prevention of financial panic and the control of gold supplies. The foundation of commerce being finance, no commercial transaction takes place in any part of the world which does not require a corresponding financial transaction to enable the equivalent obligation to be discharged. This is true not only of commercial transactions, properly so called, but of those various and intricate services of utility which are now so common. No foreign bill is drawn, no telegraphic transfer of money is effected, without a corresponding addition to the volume of international finance, which is constantly ebbing and flowing between the financial centres of the world.

Dealing only with the western hemisphere, gold is the basis upon which the vast superstructure of international finance rests and is the ultimate and basic means by which the international indebtedness of nations—the balance of trade, as it is called—falls to be discharged. We express all our transactions in terms of gold, and it is in gold that they must be finally adjusted. To enable this to be done there are stocks of gold kept by the leading banks at the great financial centres. It is on these stocks of gold that the enormous superstructure of credit, which is the leading feature of modern finance, rests. It is on the ebb and flow of these stocks of gold that the eyes of all business men are fixed, and as these stocks wax or wane at particular points, so credit, and consequently business under modern conditions increases or decreases.

Many who scan the figures regard these gold reserves as if they were independent accumulations, having relation only to the particular centres at which they are held, as if they formed separate and independent piers or columns upon which the finances of the particular country in question depend for support. It is not so. It is as though there were separate cisterns of gold, so to speak, having attached to them conduit pipes intercommunicating with each and every other similar centre, through which conduit pipes these gold supplies will inevitably and irresistibly flow in time from or to the other centres until equilibrium is restored. Finance under modern conditions is not local but international in the fullest sense of the word.

Mr. Begg says there is wanted some recognized international system by which this circulation of gold supplies can be regulated in the interest of the commercial community. In particular is some such system required for the mitigation of commercial panics and the relief of financial stress at particular centres from time to time. We are familiar with what takes place on occasions of panic, and with the loss and inconvenience which ensue. A panic breaks out in a particular country—the panic in the United States in 1907, for instance. Business is disorganized, securities of all kinds fall, finance becomes restricted, failures occur, workmen are thrown out of employment, and so on. The whole machinery of our finance is brought more or less to a standstill. It is not only the particular centre where the trouble originates—in this case the United States—which is affected. All international centres, the whole world, in fact, feels the effect. In all such cases, it is the knowledge that a flow of gold from other centres towards the disturbed centre has begun, that first produces a feeling of relief. The panic thereupon begins to subside, and a return to normal conditions begins. That international machinery should be set up through the great banks, whereby there should be maintained at various points reserves of gold specially provided for use in times of panic, is Mr. Begg's suggestion, and that these reserves should be available under proper safeguards, so that the gold may be at once shipped to the point of disturbance; that it should not be necessary to wait for the operation of natural forces or the individual initiative of Paris or Berlin, as in the American panic; that a committee of the great banks should be charged with the duty in such an eventuality of directing a stream or streams of gold to play at once on the disturbed spot, and thus anticipate or prevent an acute stage of the disturbance from emerging. Mr. Begg thinks that, just as we have evolved for the purpose of preventing or mitigating the horrors of war the international engine known as the Concert of Europe and the Tribunal at The Hague, so there is no reason why we should not evolve a concert of bankers charged with the duty of preventing or mitigating financial disturbances, which are as disastrous in their results.

These suggestions at least deserve the proper consideration of financial men. We have seen in Canada how well the banks are able to mitigate financial panic, and even to kill the germs of panic.

OLD AND NEW LOAN ISSUES

No satisfactory solution of the problem created by money market conditions in connection with Canadian borrowing appears to have been found. British investors, during recent years, have absorbed a large amount of Canadian securities. When money market conditions have been adverse, they have in many cases lost money by the depreciation of the lower interest-bearing securities, as those bearing a higher rate have had to be issued. Mr. J. G. Colmer, C.M.G., a leading authority in London on Canadian finance, said in *The Monetary Times Annual* early this year: "People who wanted to realize their earlier investments stood to make a capital loss, and naturally do not like it. This is going to affect Canadian borrowing for some time to come, and it had better be recognized."

When first-class 4½ and 5 per cent. Canadian stocks were being left on the hands of underwriters, London authorities predicted that the same stocks would be eagerly absorbed at substantial premiums before many months had passed. So it happened. Issues of which only 10 and 15 per cent. were taken by the public, and which promptly fell to substantial discounts, could later be obtained only at equally substantial premiums. The events of the past account have emphasized the change in the attitude of the investment community. The lists of a city of Calgary 5 per cent. loan were closed so quickly early this year that many would-be participants, anxious to average the 4 per cent. stocks for which they paid 100 and over, had no time to get prospectuses, much less lodge their applications, whilst the Pacific Great Eastern 4½ per cent. loan was equally sought by investors, and both quickly co[illegible] miums.

A leading authority in London [illegible] *Monetary Times* what could be done [illegible] matter. He replied: "If anything is to be [illegible] it must be done in the direction of greater [illegible] on the part of the borrower, because if lenders continue to suffer in the way that has been described they will soon lose their interest in Canadian investments."

In many cases, however, it is frequently found that the yields on existing loans are much more than can be obtained on the new loans. This fact was pointed out by our London contemporary, "Canada," which cited the case of Alberta 4 per cent. ten-year debentures and Saskatchewan 4 per cent. ten-year debentures, maturing in 1922 and 1923, respectively. The former could have been purchased early this year, including commission, for about 96, and carries 20s. of accrued interest, which would make the net price 95, whilst the latter would cost about 94 net. The yield in the first-mentioned case would be actually £4 3s. 4d per cent., and in the second instance £4 5s. 1d., but if we allow for the profit on redemption these rates would be increased to respectively £4 12s. 4d. per cent. and £4 17s. 1d. per cent., yields which compare very favorably—in view of the fact that both are provincial government securities—with the returns on, say, city of Montreal new 4½ per cent., which could not be purchased to pay more than about £4 9s. per cent.

As a matter of fact, both these provincial securities went begging whilst the public were scrambling after the Montreal 4½ per cent. issue and similar new creations. Even the new Saskatchewan 4½ per cent. debentures at their current premium gave only about £4 11s. per cent., which, bearing in mind the relatively higher yield on the 4 per cent. ten-year bonds, is one of those anomalies which can be found by the diligent student of the Official List. Investors who are anxious to take full advantage of the changed conditions of the money market will do well sometimes to consider the advisability of realizing their 4 per cent. stocks and transferring the proceeds to the 4½ per cent. and 5 per cent. issues.

CANADA IRON REORGANIZATION

Bondholders Accept Committee's Proposal—New Company's Finances

At a meeting of the first and second bondholders of the Canada Iron Corporation at Montreal the resolution of the bondholders' committee relative to a scheme of [illegible] of the company was approved unanimously. The following resolution was submitted to the meeting:

"That this meeting of the first mortgage bondholders of the Canada Iron Corporation, Limited, [illegible] approves the scheme for the reorganization of the said corporation embodied in the report, dated [illegible] the committee appointed by the general meeting of the bondholders, held on the 6th of March, 1914, and [illegible] mitted to this meeting and authorizes the Montreal Trust Company, as trustees for the said bondholders, [illegible] cancel the existing trust deed [illegible] all securities thereunder, in exchange [illegible] issue to the first mortgage bondholders [illegible] stock and fully paid ordinary [illegible] the amount and secured in [illegible] scheme, and to concur with [illegible] poration in taking all ne[illegible] the said scheme into effect [illegible] satisfied that subscriptio[illegible] proposed new company [illegible]

[illegible] $[illegible] at [illegible] per cent. of its face value will be forthcoming [illegible] of the said new undertaking."

The new company which it is proposed to form will create $[illegible] of 6 per cent. "A" debenture stock of which not less than $[illegible] and not more than $[illegible] face value, will be subscribed at a price of 85 per cent. to provide the necessary working capital. The remainder [illegible] There will also be created $[illegible] 6 per cent. [illegible] debenture stock and the existing first mortgage bondholders will be allotted an amount of this issue equivalent to the par value of their present bonds.

[illegible] $[illegible] of the stock, [illegible] with the [illegible]

MUNICIPAL SINKING FUNDS

The investment of municipal sinking funds in first mortgages [illegible] being [illegible] by some Canadian municipalities. The [illegible] authorities are unanimous in the opinion that it is unsound finance. *The Monetary Times* has always been in agreement with that view, [illegible] to striking instances where the practice has brought trouble to the municipality concerned. When the municipal bill came up in the British Columbia legislature some weeks ago, Mr. H. [illegible] Mackenzie objected to the change made in the law so as to prohibit the investment of sinking funds in mortgages. He argued at that time that rural municipalities should be allowed to invest sinking funds in first mortgage on farm property, and pointed out that land was generally assessed at 50 per cent. of its actual value, and as it could not be mortgaged for more than 50 per cent. of its assessed value the effect was that the mortgage was for only one-fourth of the cash value.

Mr. Bowser, the attorney-general, gave the only reply which we would expect from an authority, to the effect that it was not a safe thing to allow municipalities to loan on farm property or on first mortgages. There were municipalities, he said, in which the credit was not too high, and even in some named by Mr. Mackenzie, there might not be much chance to invest on first mortgages. The city of Vancouver had invested in Sumas and Abbotsford and had had to foreclose, and when it tried to sell could not do so until the "land boom" came. Municipal politics, also, enter. Bonds of municipalities are trust funds and must be so treated. The British Columbia government desire to let the investors in the Old Country know that the province is surrounding the investment of sinking funds by municipalities which would make for absolute safety.

Canadian municipalities might as well recognize now as later that the investment of their sinking funds in first mortgages is unwise finance and is regarded with suspicion and distrust by the British investor, who, by the way, has invested $2,500,000,000 in Canada.

WESTERN FREIGHT RATES

VI.

Charges in the West and Their Reasonableness

It now becomes necessary to consider the rates charged in western Canada and their reasonableness.

In this connection it is necessary at the outset to consider some underlying principles in regard to the railway situation west of the Great Lakes.

Much has been said during the inquiry as to the necessity of an increased railway mileage and the large responsibility already incurred by the people as a result of governmental guarantees of branches which are not yet returning a revenue sufficient to support them.

A further claim has also been made on behalf of the companies, that the needed railway construction cannot be had unless the existing rates are maintained for the purposes of enabling the companies to meet the deficits resulting from the first period of railway operation before a traffic is sufficiently worked up to meet expenses.

There is no doubt at all that the existing mileage of railways is entirely inadequate, at least in so far as Saskatchewan and Alberta are concerned.

For the purposes of obtaining a just appreciation of the requirements of the provinces of Saskatchewan and Alberta, where railways in many instances are a crying necessity, I took out last year figures which would show territory served and the territory which has as yet no railway facilities. The situation is not altogether the same to-day owing to the fact that the mileage has since somewhat increased, remarks Mr. H. L. Drayton, in the recent judgment on the rates question. The results, however, are still approximately correct, the variation not being very great and capable of ascertainment only on taking out a complete set of new figures.

The result showed that railways as constructed at that time in Saskatchewan served roughly 70,000 square miles, or 44,800,000 acres on the basis of the 10-mile haul. What I mean by a 10-mile haul is that all the acreage within a distance of 10 miles, taken at right angles from the railway track, is taken as acreage with sufficient railway accommodation. I have arrived at this distance after hearing complaints of farmers in the west. This 10-mile distance in some instances, of course, means a longer haul, as grain platforms or elevators do not exist along the whole line, and as roads often do not run in the direct direction. Some arbitrary, however, had to be adopted. The arbitrary that is here adopted enables farmers with fair roads to market their grain and return home in one day in almost every instance.

Particular complaints have been made to the board of railway commissioners showing that what with bad roads and grades which are quite common at some points that it costs a farmer living at a distance of from 18 to 35 miles from the railway considerably more to take his grain to the railway than it does to take the grain the whole way to Fort William when it is once received on the car. Railways laid out having in view a maximum 10-mile haul would, of course, on the other hand, not be constructed nearer to each other through the farming territory than 20 miles.

Farther Than Ten Miles from Railway.

Doubtless Saskatchewan has much good arable land lying north of Township 58, but taking 58 as a point up to which it would certainly be reasonable to afford railway facilities for settlers, the result is that south of the Township line there is an area of 121,068 square miles, or 77,483,520 acres, with the [illegible] 51,068 square miles, or 32,683,520 acres [illegible] still to be served. Railways which may be constructed under the guarantees of the province outstanding last year which companies would provide facilities for 17,788,160 additional acres. This would still leave [illegible] per cent. of the [illegible] acreage farther than ten miles at least from any railway.

In Alberta, taking in the province the 74th Township [illegible] and the 14th Range west of the [illegible] on the west, the province within such boundaries [illegible] million acres. Of these acreage exist[illegible] in the neighborhood of 20,000,000 [illegible] ten-mile haul, leaving about [illegible].

[illegible] be constructed under the guarantees [illegible] outstanding last year, when completed would serve in the neighborhood of an additional 17,080,000 acres, this, however, would still leave 48 per cent. of this total acreage unprovided for.

There can be no doubt of the necessity from every standpoint of railway construction in both these provinces. There is also no question that with long hauls, bad roads, and resultant light loads, grain farming is carried on at a disadvantage.

It has been represented that it really costs farmers little to haul their grain, that the grain is hauled when a farmer would have nothing else to do, and that his horses and waggons might be just as well so employed.

Five Dollars per Day.

I find that farmers get $5 a day for a double team in the provinces when working for railways or for their own municipalities, and in some instances as high as $6. Further, it is a fact that much of the marketing of grain is done just at the time of year when the team is needed on the farm to plow. In view of the advantages of fall plowing, any unnecessary time consumed in the autumn in marketing is most disadvantageous to the farmer and to the well-being of the provinces as a whole. There is also undoubted expense for horse feed and hotel charges for most farmers, many of whom have to take at least two days in drawing a load of grain to market and back while some require from three to five days for the round trip.

It may be claimed that a farmer's time with his team is not worth $5 a day as claimed by him. Reference, however, may be had to the report made by Mr. Frank Andrews, expert in transportation, to the department of agriculture of the United States, on the cost of hauling crops from farms to shipping points. The report is one published in 1907, and, therefore, may not now be illustrative of the exact cost in the different states referred to. It is, however, valuable in that it indicates the cost of marketing is an important item, and forms, when a long haul is necessitated, a heavy burden on the producer. A table of the report dealing with long hauls, as applied to wheat, shows that for a haul of 16 miles in Iowa, with a load of 3,500 lbs., or 58⅓ bushels, the cost is 12 cents a bushel; in North Dakota, a 35-mile haul with a load of 2,700 lbs., or 45 bushels, the cost is 13.2 cents a bushel; South Dakota, a haul of 50 miles with a load of 2,500 lbs., or 41⅔ bushels, the cost is 36 cents a bushel; in Nebraska, for a haul of 30 miles, with a similar loading, the cost is 12.6 cents a bushel; in Indian Territory for a haul of 10 miles with a loading of 1,800 lbs., or 30 bushels, the cost is 9 cents a bushel; in Oklahoma, a haul of 45 miles, with a loading of 2,000 lbs., or 33⅓ bushels, the cost is 22.8 cents a bushel; in Montana, with a haul of 25 miles and a loading of 2,500 lbs., or 41⅔ bushels the cost is 25.2 cents a bushel; in Washington, for a haul of 60 miles, with a loading of 2,000 lbs., or 33⅓ bushels, the cost is 84 cents a bushel; and in California for a haul of 35 miles with a loading of 5,000 lbs., or 83⅓ bushels, the cost is 27 cents a bushel.

In Best Interests of Districts.

I am therefore of opinion that the object doubtless sought by the provincial governments in guaranteeing railway bonds—namely, that of bringing railways within reasonable distances of the farmers so as to enable grain to be marketed in one day's haul is the best interests of the districts; although it well may be, as pointed out by Mr. Pitblado, that the construction of such lines is in the first instance unremunerative to the company, and forms a reason why, as argued by him, that the returns of the Canadian Northern are not more satisfactory.

◆

The new officers of the Union of Saskatchewan municipalities were elected as follows:—President, Mr. H. C. Pope, Moose Jaw; vice-president, Mr. O. J. Godfrey, Indian Head; hon. secretary-treasurer, Mr. W. F. Heal, Moose Jaw; executive committee, Dr. Baily, Moose Jaw; Mr. Blair, Regina; Mr. Leslie, Saskatoon; Mr. Argue, Swift Current; Mr. Dixon, North Battleford; Mr. McTaggart, Weyburn; and Mr. J. S. Woodward, Prince Albert. These were elected from the cities. The members of the executive elected from the towns were as follows: Messrs. F. H. Clarkson, Melville; D. Tanner, Moosomin; O. W. Anderson, Humboldt; J. L. McGrath, Yorkton; and John Miller, Indian Head. The members elected from the villages were:—Messrs. M. B. Currey, Macoun; J. B. Miller, S. Evans and M. Devlin, Avonlea.

LONDON, A COLLECTION OF MARKETS

Doubtful Whether Montreal Would Be Prudent—Constancy in Business

That the proposal of Montreal is [illegible] in London is shown in the special correspondence [illegible] *Monetary Times* of last week, and from another London source comes the following comment:—

That Montreal has a perfect right to turn elsewhere than to London for her finance, and that New York has an equally good right to make a profit as intermediary when she sees the opportunity, no one would deny, is the statement of the London correspondent of the New York Annalist. But it is doubtful whether the Canadian borrower is altogether prudent in changing its market, and whether the New York lender will find it altogether easy to "shoot" the bonds on London when the time comes. A market is a ticklish thing, and the wise man—whatever his business, whether he deals in scrip and bonds, in insurance policies, in soft goods, or in frozen meat—does not readily change it unless he sees his way clear before him.

Conglomeration of Markets.

We sometimes speak of London, and particularly of "the city," as though it were one great market, whereas in fact it is a conglomeration of thousands of markets, sympathetic markets, no doubt, but at the same time distinct from one another and controlled by specialists who make one particular business their peculiar study. The Stock Exchange contains a thousand different markets for securities, Lloyds a hundred different markets for insurance, Mincing Lane a hundred different markets for produce, Coleman Street many different markets for wool, and so on. Each has its own recognized specialty, its own record, and its own experience. Most of them are essentially conservative, and will take business that they are accustomed to from force of habit and because they do not like to destroy old connections, even though they do not care for the business itself. Every time you deal with a man for one particular piece of business you make it easier to repeat the deal, and incidentally most difficult to place the business with his neighbors. You are emphasizing the fact that he rather than the man next door is "the market."

Danger of Changing.

And here lies the peculiar danger of changing your market, for business in Europe at any rate goes largely by routine, and every alteration raises a suspicion against the business. "Why do you come to us instead of to So-and-So?" is the natural question to ask a man who comes along to a fresh market. "He specializes in this class of business; he has always taken it; there must surely be something wrong with it when you bring it to me rather than to him." And the market once changed is not easily restored, for when you take the business back to your old friend he asks the same question in another form. "Why offer me the business now, when you took it away twelve months ago? Has So-and-So had enough of it, that you take it [illegible] from him?"

It is the danger of getting involved in difficulties of this kind that makes borrowers chary of [illegible] markets in times of stringency. The Balkan States [illegible] the onerous terms imposed by Paris bankers, [illegible] place their loans in Paris rather than [illegible] market in London, and probably they are [illegible] loan brought to London by them would [illegible] when the business went back to Paris, P[illegible] screw its terms up to teach th[illegible] business constancy.

By order of the Board.

D. R. WILKIE,
General Manager.

Toronto, 24th June, 1914.

FREIGHT BY RAIL OR WATER?

Comparison in Transportation Charges—Capital Cost of Canals

Water rates were considera[illegible] rates. It is easily possible wi[illegible] during the past year by the department [illegible] canals to put certain water rates [illegible] but such a measurement could [illegible] accuracy until carriers by water are [illegible] tistical footing as that now occupied [illegible] are large and important factors [illegible] able with regard to the operations of certain [illegible] on the inland waters of Canada. When all the [illegible] known it will then be practicable to make [illegible] parison. The whole statistical situation [illegible] riers by water may be charged during [illegible]

It has been shown that the average [illegible] on canal traffic in 1913 was .[illegible]84. The corresponding average rate for all the railways of Canada in 1913 [illegible]. The comparison is most favorable to carriers by water. But it must not be forgotten that government [illegible] contribution toward freight rates by water. The canals have not only been constructed by the government, but the government also maintains and operates them. It is therefore obviously reasonable to ask what the freight rate by water would have been in 1913 if carriers had been obliged to meet the interest on the cost of canals as well as the cost of maintenance. The facts are at hand.

Capital Cost of Canals.

The capital cost of the canals of Canada up to [illegible] March, 1913, was $105,656,657. Interest at [illegible] per cent. on this sum would amount to $3,[illegible]97,612. The cost of maintenance for the fiscal year 1913 was $1,6[illegible]. These two sums combined give a total of 5,[illegible]. The Canadian tonnage in 1913 was 6,654,311; so that the government contribution was equal to 78.85 cents per ton. Assuming that all the Canadian tonnage was carried at the freight rates [illegible] as 99.37 cents per ton, it will be seen that 78.85 cents was the precise equivalent to .146 per ton per mile. Put into tabular form the account would stand as follows:—

	Per ton cents	Per ton per mile cents
Actual freight rate	[illegible]	[illegible]
Government contribution	[illegible]	[illegible]
Total	[illegible]	[illegible]

The rail rate on wheat from Fort William to Montreal is 12 cents per bushel, or $4 per ton. This is equal to [illegible] per ton per mile; so that the difference [illegible] water borne wheat in 1913 was .671 per ton per mile. Put in another way, if shippers had been obliged to meet the amount involved in the public contribution [illegible] the freight cost to Montreal in 1913 would have been [illegible] per bushel instead of 5.351. It should be added that [illegible] maintenance of the canals is not the only government contribution to the water rate. If the cost of [illegible] harbors, lighting, dredging, etc., had been taken into account there would have been a considerable addition. As it was, however, the rate by water [illegible] the rate by rail.

Great Lakes Insurance Rates.

The insurance rates which prevail [illegible] St. Lawrence and Great Lakes route [illegible] 4¾ per cent. from the head of [illegible] end of Lake Erie, an additional [illegible] and a further 1 per cent. to Montreal [illegible] total 6¾ per cent. from Port Arthur [illegible] to Montreal, or 2 per cent. more than to Buffalo [illegible] taken into account in comparing [illegible] Buffalo and Montreal. In December [illegible] lowed for the first five days at [illegible]

INDUSTRIAL ONTARIO

Produced Goods Valued at $156,000,000 in Twelve Months —Municipal Public Utilities

Ontario's growth as a province of industrial activity in addition to its extensive agricultural development is shown in the fourteenth report of provincial bureau of labor.

The increase in the number of returns from manufacturers still continues, there being 911 as compared with 867 last year. Of these, 89, the bureau states, were too incomplete for tabulation, leaving to be so treated 822 establishments employing 61,637 persons, as compared with 818 employing 57,991 persons. The aggregate number of days in operation in these 822 establishments was 235,000 as compared with 229,473. The product was $156,712,991 as compared with $139,090,138. The wages were $37,806,066 as compared with $28,022,416. The average wage rate per year was $532.70 and per day, $1.81 as compared with $495.10 and $1.74.

Building and Municipal Expenditure.

There were 27,912 new buildings erected in 1912, costing $69,539,807; expenditure on permanent improvements, such as roadways, bridges, etc., $8,739,241; and on sanitation, including sewers, $4,008,545. 19 cities report 17,854 new buildings, costing $51,271,898; expenditure on permanent improvements, $4,444,705; and on sanitation, $3,227,243. 127 towns report 4,255 new buildings, costing $11,067,768; expenditure on public improvements, $2,095,327; and on sanitation, $695,385. 140 incorporated villages report 653 new buildings, costing $1,312,660; expenditure on permanent improvements, $243,760, and on sanitation, $47,205. The 529 townships or groups of townships reporting, about 13 not doing so, give 5,150 new buildings, costing $5,887,481; expenditure on permanent improvements, $1,055,449; and on sanitation, $43,712.

Extent of Municipal Ownership.

Public utilities owned and operated by two hundred and twenty-three Ontario municipalities can be classified as follows:

Waterworks	$30,756,198
Electric lighting	10,002,206
Gas	842,748
Street Railways	1,566,220
Power	1,100,602
Telephone	808,655
Miscellaneous	161,890

Cities report assets of this character valued at $10,503,736, villages $1,531,840, and townships $559,688.

◆

EVOLUTON OF INSURANCE.

In an address before the American Association of Accident Underwriters by Insurance Commissioner Preus, of Minnesota, he said: "Insurance of every kind was initially a mutual system whereby a number of individuals agreed to reimburse each individual in the event of loss. Insurance today is systematized trusteeship. The same underlying principles constitute insurance as they did 1,200 years ago.

"The evolution of insurance, has been different in various countries of the world. In one place we find that it is the belief of people that in the event of the death of a provider of a family the duty rests upon the state to care for his dependents. In another we find that a man who owns property should pay to his community a tax in order that he may rebuild his own property in case of fire. Again, we find in another country that the state assumes the duty of granting old-age pensions. Again you find that industries are charged with the duty of caring for their sick and injured.

"But, insurance-wise, the highest morality has been reached in that one land where a man neither buys life insurance, fire insurance or accident insurance at the end of a stick, but as the result of his own regard for his dependents, his financial standing in the community, and his continued personal property."

◆

Following the intimation given at the annual meeting of the Standard Reliance Mortgage Corporation of Toronto, the dividend on the stock of the corporation has been increased so that the stock is now on a 7 per cent. basis.

THE DOMINION BANK

THE Bank, having over 310 Branches in Canada extending from Halifax to Prince Rupert, offers excellent facilities for the transaction of every description of Banking business. It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

PANAMA AND PACIFIC PORTS

Growth of Trade is Anticipated—Will Not Be Sudden—British Columbia Sends India Lumber

(Staff Correspondence.)

Vancouver, July 4.

One of the first definite indications of the expansion of trade following the opening of a new short route via the Panama canal is the announcement that a line of steamers will ply between Bristol and the North Pacific coast. Mr. Henry Riseley and Mr. Manning Lewis, of Bristol, were in Vancouver this week and held a conference with members of the board of trade as to the possibilities of increasing trade between this city and Bristol. Mr. Riseley hoped to see a monthly service at the beginning with perhaps a weekly service later on. A year or two ago the matter of increased trade with Bristol came up, and it was viewed favorably. It would seem at times as if the expectation was that immediately traffic begins by this route that wharf capacity of north Pacific ports will be taxed by the demands of shipping. It has been pointed out previously that this is too much to look forward to, and, while cities all along the line are spending much money on wharf improvements and extensions, it is with a view to the future rather than to take care of the immediate demands of the present. The improvements in any of the cities are only starts which would show that, while more trade is expected, it will develop gradually. This is the view, too, of Mr. C. H. Gordon, of the board of harbor commissioners of Los Angeles, California, who was in Vancouver this week, and remarked that Vancouver has in her natural harbor what Los Angeles is spending $20,000,000 to get. When the time comes to take care of trade, it will be found the accommodation on Burrard inlet, the Fraser river, and at Victoria will be ample.

False Creek Terminals.

The city of Vancouver has been given the assurance by Sir Donald Mann that one of the best railroad terminal engineers on the American continent has been engaged by the Canadian Northern Railway Company to lay out the terminals at the head of False Creek. This improvement, as agreed upon between the city and the company, has been slow of consummation, and it was in response to a call from a representative of the city that the announcement was made.

It is by reports of operating mining companies which appear from time to time that one learns what is being quietly done in the interior. The Rambler Cariboo Mines, Limited, is not a new concern, but like most of the successful companies in south-eastern British Columbia, is headed by United States interests. Statements presented at the annual meeting, held at the company's office near Three Forks, show that since April 30th, 1913, an indebtedness of $81,434 had been reduced by $55,334, leaving the liability at $26,100. In addition, a liberal amount had been written off mine and mill equipment and [illegible] accounts for depreciation. Within the last two years the company has spent $35,807 on the completion of a new concentrator, $18,073 on an aerial tramway, [illegible] buildings, [illegible] offices, assay house and bunk-houses, the ground for which cost $11,000. There is sufficient ore in sight for continued operation for the next two years.

Orders from India.

It is hoped that an order just received by the [illegible] Creosoting Company, South Vancouver, [illegible] the Bengal and Northwestern Railway Company, [illegible] be only the first of its kind. The [illegible] the native woods of India when used [illegible] quently hardwood ties have been [illegible] These are becoming dearer, [illegible] British Columbia fir. It is believed [illegible] properly creosoted, will do the work [illegible] to add, this first shipment will [illegible] it is ready for delivery, it will [illegible] member of the forest branch [illegible] Victoria.

FIRE ESCAPES AND EMPLOYEES' PROTECTION

Ontario's Chief Factory Inspector's Views — Dropped Cigarettes and Matches—Suggestion of Legislation

The work of providing additional fire escape exits has received a great deal of time and attention, as every little while fire disasters occur in factories, theatres, schools, etc., leaving in their train a deplorable loss of life, writes Ontario's Chief Factory Inspector, J. T. Burke, in his annual report. The factory inspectors, however, are discharging their duties irrespective of some opposition from owners of such buildings as come within our jurisdiction, who point out they are in the close vicinity of the fire hall or they have a fire-proof building. Others again claim an outside fire escape defaces the appearance of their building, and that there is no possibility of a fire originating in their building, but the answer to such objections are that the law is mandatory, and that we do not recognize a fire-proof building as being reasonably safe with only one stairway exit, even if it has been erected in a fire-proof tower. The best authorities agree that no known industrial buildings are safe with only one tower stairway. There should at least be two exits to every building where employees are engaged on the upper floors, and we are taking no chances, as experience is a great teacher. It is obvious that suitable fire protection should be considered an imperative necessity, as our observations at the time of the big fire in Toronto demonstrated that no form of building construction available will stand up in face of a fire that penetrates or strikes from both sides. Ribbed or wire glass with metal sashes and frames have been found inadequate, but its defect, apart from imprisoning the employees, is that radiant heat passes through the wire glass almost as easily as it does through any other glass, and the only records which have contributed to the success of wire glass are due to the fact that nothing combustible was behind such glass; of course, I do not mean that wire glass, etc., is not useful as a temporary fire-stop, but it has its limitations, as demonstrated when subjected to a practical test.

The Careless Smoker.

Fires are often blamed on defective wiring, whereas if the facts were known the cause would be found to be due to a cigarette or match. Smoking in textile, clothing and wood-working factories should be prohibited.

Of course, there are plants where employees could smoke with a certain degree of safety, if the privilege were not abused, but where such is granted employees are liable to become careless in throwing matches and cigarette ends into material that may start a fire, and it is more by good luck than good management that more fires do not occur through this agency.

Not Had Desired Effect.

The best information obtainable shows that fire prevention has not had the desired effect of reducing fires in factories, and many warehouses and factories are now being built of fire-proof or slow-burning material. Many of these buildings are also equipped with sprinkler systems, inside standpipes and hose, and extinguishers; also barrels filled with water and a number of pails for emergency use, as well as supplies of sand where chemicals are used. The method of installing factory and warehouse windows made of metal sash and wire glass may have the approval of associations interested only in saving such buildings, but I certainly feel that with the present method of window construction an additional hazard has been created in as far as it relates to the employees, for the only outlet to such windows is a small swivel opening in the centre of each sash, usually not large enough to allow an employee to get through to one of the fireman's ladders, apprehending that the stairway exit has been cut off and fire escapes are congested. It is well known that the number of employees increase or decrease with the fluctuations of trade, so that we feel that employees are practically imprisoned in such buildings, as even with a sledge hammer placed at every window for the purpose of breaking them out, and a muscular person to operate same, the employees would be suffocated before help could be secured. Unless this method of construction is discontinued we shall be obliged to urge that laws be placed on the statute books against such window construction.

135th Dividend

The shareholders of the Molsons Bank are hereby notified that a dividend of two and three-quarters per cent. (being at the rate of 11 per cent. per annum) upon the Capital stock has been declared for the current quarter, and that the same will be payable at the office of the Bank, in Montreal, and at the branches, on and after the second day of July next to shareholders of record on 15th June, 1914.

By the order of the Board.

EDWARD C. PRATT,
General Manager.

Montreal, 22nd May, 1914.

BONDS FOR $100

Many people of small means are possibly not aware of the opportunity for safe investment offered by our $100 Bonds. The small investor has looked upon owning Bonds as rather beyond him—thinking of Bonds as being only in denominations of $1,000, or some other equally impossible sum.

But $100 will buy one of our Bonds, giving the holder of it precisely the same security as those of the largest denominations. They are a security in which Executors and Trustees are by law authorized to invest

CEDAR POLE SUPPLY DOOMED

One Hundred and Ninety Year Old Tree Decays in Fourteen Years—Preservative Treatment

A purchase of nearly 800,000 poles a year means the destruction of even a greater number of whole trees. While the greater number of these trees are small, under 30 feet in length and eight inches in diameter, each one represents a potential timber tree. In cutting timber for poles there are several sources of waste, including damage to remaining timber, cutting to specification and long butting to avoid flares and hollow butts. While this waste is partly necessary, careful and scientific utilization would effect a considerable saving before the poles were set in place.

Cedar poles in 1911 formed over 90 per cent of all poles purchased in Canada. Cedar grows only in south-eastern Canada and British Columbia, being entirely absent from our great stretch of northern woodland.

Cedar poles are now imported into Canada in fairly large quantities from the United States.

The average cedar pole is cut from a tree about 190 years old, and if put in place, untreated by any chemical preservative, it will decay and become useless within 14 years. It is evident from these facts that the supply of cedar poles is doomed to speedy destruction.

A telephone pole is not subjected to mechanical wear or excessive strain of any sort, and practically never wears out. It invariably decays long before the end of its mechanical life. Under these conditions some sort of preservative treatment is a self-evident necessity. Up to the present time in Canada the cheapness of poles and the cost of the treatment have prevented pole-line builders from using any preservatives.

Practically all the poles set in Canada are untreated and the annual replacements approximate 600,000.

If all the poles used in Canada were treated, a saving of 264,000 poles would be made each year, which is equivalent to a saving of 1,584,000 board feet of timber.

This estimate of Mr. R. G. Lewis, B.Sc.F., does not take into account the treatment of perishable woods. When these so-called inferior species are treated, then natural life is increased by much more than the general average of [illegible] years used in the above estimate, and the corresponding annual saving is greatly increased.

Spruce, jack pine, lodgepole pine and Western yellow pine are all fairly good pole-timbers as far as taper, height, strength and weight are concerned, but they are not durable if used in the untreated state. There are two methods of creosote or tar-oil treatment that are specially adapted to poles and can be easily and cheaply applied.

In the United States where poles are even more expensive, on the average, than in Canada, it evidently pays to apply preservative treatment. In 1910, there were [illegible] treated poles used in the United States, or over 20 per cent of all poles used in that year.

◆

WHAT A GOOD CROP MEANS

As the autumn approaches the promise of a good crop becomes more sure. The importance of the crop lies mainly in the probability that, if a failure, the depression will not be relieved. If a success, the depression should gradually [illegible]. Business men are apt to make the mistake of thinking that a good crop will lead to an instant return of business on the large scale of past years. It is probably more reasonable to expect that a good crop will be the first step in a gradual but sure improvement that should gain force as it advances, writes Mr. R. Davenport Be[illegible] in the monthly [illegible] by the financial firm of Messrs. Greenshields and Company, Montreal. There should be about [illegible] acres in wheat, slightly more than last year. Expectation [illegible] crops averages slightly more than [illegible].

With the stimulus of a good [illegible] amount of expenditure on the part of [illegible] panies receiving aid from the [illegible] latter may be, it nevertheless will [illegible] the inertia of the industrial [illegible] mentum of the machine in motion [illegible]

ASSUMPTION OF DEBT

States of Neighboring Republic Indulge in Different Practices—Their Obligations Are Heavy

An interesting bulletin, dealing with national and State indebtedness, funds and investments, is issued by Director W. J. Harris, of the commerce census bureau, Washington. It gives information for each state of the neighboring republic, and for the country as a whole. On June 30, 1913, (or the close of the fiscal year falling within the 12 months preceding that date), the total debt of the 48 states in the United States amounted to $419,157,000. Of this total about $19,000,000 represented floating debt, and nearly $400,000,000 represent funded debt. Of the funded debt about $359,000,000 are represented by bonds, and $41,000,000 are special debt obligations to public trust funds.

As an offsetting item against the total debt, the 48 states reported $77,032,000 in sinking fund assets, leaving the debt (less sinking fund assets) for the 48 states $342,251,000.

Assumption of Debt.

Various practices are found in different states with reference to the assumption of debt by the states, and some difficulty arises when attempt is made to compare the debt of the different states. The only two states which call for special mention in this connection are Arizona and Massachusetts. In Arizona the state has assumed responsibility for a very large amount of county and municipal debt, and has issued state obligations to cover the same, holding the counties and municipalities responsible in turn. It might be noted, however, that the Arizona debt even under these circumstances amounts to only eight-tenths of 1 per cent. of the total for the United States. Massachusetts, on the other hand, has assumed liability for debts of metropolitan districts which in most states would probably be classed as local, county, or municipal debt. The total debt (less sinking fund assets) for Massachusetts represents 23.2 per cent. of the debt for all states in the United States. Iowa, Wyoming, and Oregon each has less than one-tenth of 1 per cent. of the debt of all states, while in the case of Pennsylvania the sinking fund assets exceed the total debt. Vermont, Nebraska, and Kansas each has only one-tenth of 1 per cent. of the debt of the 48 states; in contrast, New York has 25 per cent. of the total for the 48 states.

Per Capita Debt.

A study of the per capita debt shows that in Iowa the debt (less sinking fund assets) amounts to only three cents per capita, and in Oregon, four cents per capita. In Arkansas, Florida, Illinois, Indiana, Iowa, Kansas, Minnesota, Nebraska, New Jersey, Oregon, Pennsylvania, South Dakota, Texas, West Virginia, Wisconsin, and Wyoming, the per capita debt (less sinking fund assets) is less than $1.

According to the report of 10 years ago, the indebtedness (less sinking fund assets) for the 48 states amounted to $234,909,000 as compared with $342,251,000 shown in the report now being prepared. This is an increase in 10 years of $107,342,000, or nearly 50 per cent., in contrast with an increase of slightly more than 20 per cent. in the population of the country. Ten years before that, in 1890, the indebtedness (less sinking fund assets) for the states and territories of the United States amounted to $211,210,000; while in 1880 it amounted to $274,746,000.

How Debt Has Grown.

Thus between 1880 and 1902 the per capita indebtedness (less sinking fund assets) for the 48 states combined gradually decreased, while during the last 10 years there has been a very noticeable increase. In 1880 the per capita indebtedness (less sinking fund assets) amounted to $5.48; in 1890 it had been reduced to $3.37, due to the increase in population and decrease in debt; in 1902 it amounted to $2.99, due to the rapid increase in population and very slight increase in debt; in 1912, the per capita debt had again increased to $3.52, the increase being due to a rapid increase in debt in contrast with a much slower increase in population.

◆

The tariff changes announced in Finance Minister White's budget on April 6th, in so far as they involve increased duties, are now operative in Canada.

TEN MILLION DOLLARS WORTH OF CEMENT

Was Produced in Canada in Twelve Months by Twenty-four Plants

The production of cement in Canada during the past few years, though all classed as Portland, has included an output of Puzzolan cement, made from blast furnace slag at Sydney, N.S., and a small production of "natural Portland" made at Babcock, Manitoba, 75 miles southwest of Winnipeg, on the Canadian Northern Railway.

The total quantity of cement made in Canada in 1912 as per reports received from the manufacturers was 7,141,004 barrels, 350 pounds net each (1,249,675 tons), as compared with 5,677,539 barrels (993,569 tons) made in 1911, an increase of 1,463,465 barrels, or over 25 per cent.

The total quantity of Canadian Portland cement sold in 1912 was 7,132,732 barrels (1,248,228 tons), as compared with 5,692,915 barrels (996,260 tons) in 1911, an increase of 1,439,817 barrels, or over 25 per cent.

The total consumption of Portland cement in 1912, including Canadian and imported cement, was 8,567,145 barrels of 350 pounds net each (1,499,250 tons), as compared with 6,354,831 barrels (1,112,095 tons) in 1911, or an increase of 2,212,314 barrels, or nearly 35 per cent., according to the statistics of the department of mines, prepared by Mr. J. McLeish, B.A.

Duty was Reduced.

During the early part of the season of 1912 there was a shortage of cement supplies in western Canada owing to the apparent inability of Canadian producers to meet the demand. It was claimed, however, that the shortage was due in large part to the failure of transportation companies to provide sufficient transportation facilities for moving the cement from the eastern mills to the western market. Acceding to a strong demand from western cities and with a view to relieving the situation in some measure, the Dominion Government reduced the duty on cement by one-half, such reduction remaining in force from June 12th to October 31st.

The cement industry continues to increase rapidly in importance, and its output is exceeded in value amongst non-metallic products by coal and clay products only. There were employed in Canadian cement plants during 1912 an average of 3,461 men, and the total wages paid were $2,623,902.

The production of cement in 1912 was derived from 24 operating plants, in addition to which sales were made from two other plants not producing, the total daily capacity of these plants being 36,515 barrels. The producing plants were distributed as follows: one in Nova Scotia using blast furnace slag; one in Manitoba making a natural Portland cement; one in British Columbia, three in Alberta and three in Quebec using limestone and clay; fifteen in Ontario, of which ten use marl and five limestone.

Price was Seven Cents Lower.

Stocks on hand December 31st, 1912, were practically the same as stocks at the end of the previous year, about 900,000 barrels. The average price per barrel at the mill for all plants showed a slight falling off in 1912, being reported as $1.27¾ as compared with $1.34 in 1911. An increase of 15 per cent. is shown in number of men employed, and an increase of over 24 per cent. in amount of wages paid.

The imports of cement in 1912 were over double those of 1911, the increase being over 110 per cent. in quantity and nearly 136 per cent. in value. The average price per barrel of imported cement in 1912 is shown as 11 cents higher than the average price in 1911.

Of the total quantity of cement made in 1912, [illegible] barrels were made from marl, and 5,[illegible] barrels from limestone and slag. In 1911, there were [illegible] barrels made from marl and 4,050,68[illegible] barrels from limestone and slag, while in 1910, 1,214,470 barrels were made from marl, and 3,181,803 barrels from limestone and slag. With the exception of the new plant at Marlbank, all of the newer plants erected during [illegible] have been limestone plants. The proportion [illegible] from marl in 1908 was about 45 per cent. [illegible] as compared with 28 per cent. [illegible] in 1912.

Very little cement is exported [illegible] is not shown in the export [illegible] ment, but the value of the [illegible] $2,436 as against a value of $[illegible] in 1910.

The United States has been the principal source of imports during the past few years and supplied about 89 per cent. of the imports in 1912, as compared with about 9 per cent. from Great Britain. In 1911 about 66 per cent. of the total imports were from the United States and 29 per cent. from Great Britain.

The consumption of cement is represented practically by the domestic production, together with the imports, the exports being so comparatively small as to be negligible. The total consumption of Portland cement in Canada in 1912 was 8,567,145 barrels (1,499,250 tons), made up of 7,132,732 barrels (1,248,228 tons) of Canadian cement, and 1,434,413 barrels (251,022 tons) of imported cement, the Canadian cement representing 83.3 per cent., and the imported cement 16.7 per cent. of the total.

In 1911 the total consumption of cement was 6,354,831 barrels (1,112,005 tons), made up of 5,692,915 barrels (996,260 tons) of Canadian cement, and 661,916 barrels (115,835 tons) of imported cement, the Canadian cement representing 90 per cent. and the imported cement 10 per cent. of the total.

In 1910 the total consumption of cement was 5,103,285 barrels (893,075 tons), of which 93 per cent. was of domestic production and 7 per cent. imported. In 1901 the total consumption was 872,666 barrels (152,766 tons), of which only 36 per cent. was made in Canada and 64 per cent. imported.

◆

MAY BRING FRENCH CAPITAL.

Monetary Times Office,
Montreal, June 30th.

Montreal probably takes more interest in the effect of the new French tax on income than other cities in the Dominion, for the reason that there is a closer association with France here than elsewhere in Canada. Local brokerage houses have representation in France, and financial institutions, large and small, are located here which invest French money in Canada.

Commencing July 1st the French government will collect a tax of 5 per cent. on income received in France from foreign investments in bonds, stocks or securities of any form. It is not generally thought here that this tax will have any very striking effect on the trend of investment. For some time past, the French government has imposed an income tax of 4 per cent. on income from French securities and 5 per cent. on income from foreign securities held in France. So far as the latter is concerned, the latter has been pretty much of a dead letter, the tax not having been collected. It is now proposed to make the banks responsible for keeping the records of payments made through them.

To some extent, the effect will be, it is thought, to occasion some exodus of capital from France. French investors will doubtless incline to make their purchases of foreign securities in other countries and have the coupons and dividends collected in these countries by local trust companies. It is thought that when remittances are made from time to time from these trust companies to investors in France, it will puzzle the government to know what source the money comes from or on what account it is received.

A Montreal brokerage house, with large French connections, will, it is thought, be in a position to take advantage of any exodus of capital which may occur or of any tendency in the direction mentioned. It recently established a branch in Geneva, Switzerland, this branch having been in operation since early in June. It is thought that this move will bring increased business because of the imposition of the tax. It is further argued that even though the investor does not resort to means to evade the tax, the return from foreign investments is so much greater than that on domestic investment that the difference between the tax imposed on the two classes will be more than offset.

◆

The output of the co-operative creameries in Saskatchewan is increasing at a rapid rate as is shown by the government report, recently issued. In the six winter months of 1912-13 the output was 112,732 pounds of butter, whereas during the same period of 1913-14 it was 235,340. The total increase was 122,608 pounds of butter, or 100 per cent.

ELIMINATION OF TONTINE BONUS

In Modern United States Insurance Business—Some British Forms of Deferred Features

At one time an enormous amount of life assurance business was written on the tontine bonus system, principally by American offices. Instead of dividing the surplus among the policyholders at periodical intervals, yearly or quinquennially, as is the usual custom, the profits earned on all policies in this class were allowed to accumulate for the benefit of those policyholders who survived a specified term—usually 15 years. Naturally, such bonuses, when allotted, would prove to be greater than those allocated to policies entitled to yearly distributions; so that the system is one that could not fail to attract policyholders, more especially those who "fancied" their prospects of longevity, says the London Financial News.

But unfortunately for the system it lent itself to exaggerated estimates of the probable amount of such bonuses. Both agents and policyholders were apt to hold extremely sanguine views with regard to these tontine bonuses, and consequently the actual allotments, when they became due, were, in many instances, of a disappointing character. The system has now been abandoned, and for the past seven years all new policies issued by the American offices have been subject to yearly bonuses. At the same time a considerable number of the policies at present on their books are of the deferred-bonus order; but every year a large proportion of these complete their deferred-bonus period and become entitled to their first bonus. In course of time, therefore, the deferred-bonus system, as formerly operated by the American offices, will be a thing of the past; but, meanwhile, these societies carry forward each year a large sum as undivided surplus, being a provision for the bonuses eventually to be paid on such policies.

Not a Feature of British Offices.

British life offices have never made a great feature of deferred-bonus policies; in fact, as a class, they have always been careful to avoid the tontine element. Several offices, however, quote rates for whole-life policies which do not rank for bonus until the premiums paid, with interest accumulations, amount to the sum assured. But it will generally be found that the premiums charged are considerably less than the normal rates for immediate-bonus assurances; so that in this way the policyholder receives a bonus from the commencement. And, even if the first bonus allotted be a substantial one, it is yet much below the total accumulations of a similar policy effected at a normal rate of premium. Consequently, there is but little scope for misrepresentation and no office (or its representatives) is likely to indulge in estimates which may prove at all misleading. The deferred-bonus system, as adopted by these offices, differs materially from the deferred-bonus system formerly associated with the American companies.

A few British offices, however, have been willing to allow their policyholders the option of surrendering a vested bonus addition for a contingent or deferred bonus of greater amount vesting some years hence. To obtain any appreciable benefit in this way the policyholder must select a fairly long period of deferment or an advanced age at which the bonus should vest; but few policyholders care to take any risk of this nature, so such an option is never likely to prove popular.

There seems to be a rooted objection to giving up a bonus that has already been allotted; but when the question is one that can be settled at the time the policy is issued the matter is wont to present itself in a more attractive light. Double endowments will always find many buyers, though in this case half the sum assured is contingent upon the policyholder surviving the specified term. That part of the contract may be looked upon as [illegible] bonus of 100 per cent., and probably [illegible] addition and the fact that it is guaranteed [illegible] for the popularity of this form of contract.

A guaranteed bonus is [illegible] life policy, and we may therefore [illegible] of success for the new type of [illegible] the Standard has recently introduced [illegible] familiar one of whole life assurance [illegible] for 20 years only. But each [illegible]

lotted, is converted into its equivalent deferred bonus, vesting at the end of the 20-year period. At the last distribution of surplus the reversionary bonus allotted by the Standard was at the rate of 30s. per cent. per annum, and this may be taken as representative of the company's normal capabilities in this line. But those who effect policies under this new scheme need not concern themselves greatly with the probable amount of future bonuses; for the company guarantees that the total of the deferred bonuses at the end of 20 years will be at least £35 per £100 assured. This is a very handsome bonus, and it must be particularly soothing to the policyholder to reflect that it is only a minimum, and that there is some prospect of it being exceeded. When all premiums due have been paid, and the deferred bonus has vested, the policy will continue to participate in the ordinary quinquennial bonus of the company. It will also carry a substantial surrender value, the guaranteed minimum on the cessation of premiums being greater than the total amount of premiums paid. In every way, therefore, the scheme is an attractive one, well worthy of an office which ranks as one of the largest of British life assurance institutions

◆

TOOKE BROTHERS' EARNINGS

Monetary Times' Office,
Montreal, July 7.

Commenting on the fact that Tooke Brothers preferred stock is at a low figure, a local holder of considerable stock, who has been following the matter closely, expresses the opinion that the decline is due to two causes, namely, earnings, and the market situation. He thinks there has been a falling off in earnings, but states that the preferred dividend has been more than earned. Last year, the earnings were as follows:—

Net profits, after providing for depreciation, etc....	$98,840
Less preferred dividend	60,290
Balance to credit of profit and loss account	$38,550
Profit and loss balance at beginning year	45,747
Profit and loss carried forward	$84,297

It will be seen from the above that the actual net profits would have to fall off $38,000, as compared with a year ago, before it would be necessary for the company to fall back on profit and loss account to pay preferred dividends, so that there are indications that the statement that the preferred dividend has been earned, is within the mark.

◆

YUKON FOXES DYING IN CAPTIVITY.

The enthusiasm concerning fox catching and farming in Yukon has materially waned during the past few weeks, owing to the fact that the price of foxes has decreased nearly 50 per cent. since last summer and that hundreds of foxes held in captivity have died from some unknown cause, states United States consular reports. Many of these foxes were black, and, in some cases, as high as $1,500 to $2,000 had been paid for them. One dealer who, it is said, could have sold his stock of foxes in July for $65,000, sold two weeks ago for less than $35,000, the latter price being, to some extent, due to the decline in prices, but also to the fact that many of the animals had died in the meantime. One young black fox, for which $1,600 had been paid, died five days after being placed in the corral

Owing to the decline in price, fully 150 young foxes, all of the red variety, held in captivity in southern Yukon, have been turned out to return to their native haunts in the wilds. Previous to sickness developing among foxes in captivity here, upwards of 200 young ones had been shipped from Whitehorse alone, to fox ranches in New Brunswick, Prince Edward Island, and to dealers near Boston, Mass. At present there are not over 50 held in this locality.

A number are experimenting with mink farming, but great difficulty is experienced in keeping them, wire corrals offering little resistance when they seek their freedom.

Owners of black and silver gray foxes are not discouraged over the slump in prices, but contend that they will be more valuable than ever within a few months.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Ritz-Carlton Company.—A denial to the rumor that the Ritz-Carlton Hotel directorate was considering a change of policy, involving, possibly, the closing of the hotel, has been made by Mr. Charles R. Hosmer, the president of the company.

"The directors of the hotel met," said Mr. Hosmer, "and arrangements were made whereby the hotel will be continued under the same conditions, and on the same scale as formerly."

Twin City Rapid Transit Company.—The following are the company's returns for the first three weeks in June:—

	1914.	1913.	Increase.
First week	$ 181,372.80	$ 169,745.03	$ 11,627.77
Second week	182,152.57	172,863.56	9,289.01
Third week	185,575.88	181,948.12	3,627.76
Month to date	$ 549,101.25	$ 524,556.71	$ 24,544.54
Year to date	$4,236,101.77	$3,960,825.89	$260,275.88

Porto Rico Railways Company, Limited.—The following is a comparative statement of earnings of the company for May:—

	1913.	1914.	
For May:			
Gross	$ 73,022.88	$ 68,932.24	— $10,090.64
Net	32,346.66	26,893.23	— 5,453.43
For five months:			
Gross	363,120.81	344,111.30	— 19,009.51
Net	159,799.06	156,465.37	— 3,333.69

San Antonio Land and Irrigation Company.—A meeting of the holders of the 12-year 6 per cent. first mortgage bonds of the San Antonio Land and Irrigation Company, Limited, has been called for July 21 in Toronto. The bondholders will be asked to sanction the modification of their rights in order to enable the company to defer payment of bond interest for two years from May 1, 1914, or until the sales of land shall enable the payment of bond interest to be resumed, which ever is the shortest period. They will also be asked to waive any default in interest payments during that period. Messrs. E. R. Wood, Walter Gow, Miller Lash and R. C. Brown of Toronto are directors of the company.

Ames-Holden-McCready, Limited.—At the annual meeting of Ames-Holden-McCready, Limited, Mr. D. Lorne McGibbon, president, was elected managing director of the consolidation on the retirement of Mr. Clarence H. Smith.

The new board of directors was elected as follows: Mr. D. Lorne McGibbon, managing director and president; Messrs. H. B. Ames, R. C. Holden, A. L. Johnson and Fleetwood H. Ward, vice-presidents; Hon. N. Curry, Messrs. Fayette Brown, Victor E. Mitchell, K.C., J. C. Holden, Shirley Ogilvie, W. S. Louson, J. H. McKechnie, S. J. Lehuray, Sir Thomas Tait and W. A. Matley.

The last three are new members of the board, the retiring directors being Messrs. Clarence H. Smith and W. R. Allen, the vacancy caused by the retirement of Mr. J. W. McConnell also being filled.

St. Lawrence Sugar Refineries, Limited.—Mr. J. W. McConnell has been elected president of the St. Lawrence Sugar Refineries, Limited, and Mr. A. Baumgarten becomes honorary president.

At the annual meeting of the shareholders, Mr. A. Baumgarten, who has been president of the company for many years, and under whose administration the concern has made such satisfactory progress, expressed his desire to retire from the active management, but will, however, be still identified with the company as honorary president.

The board of directors was increased from five to [illegible] the new member being Mr. Lorne C. Webster, of Montreal, and as at present constituted, the board of directors is as follows:—Mr. A. Baumgarten, hon. president; Mr. J. W. McConnell, president; Mr. O. W. Donner, vice-president and managing director; Mr. E. A. R[illegible], of New York; Mr. Lorne C. Webster, of Montreal; and Mr. B. [illegible], secretary and treasurer.

The company's financial statement [illegible] presented at the meeting and was [illegible]

Dominion Trust Company.—This company's shares are held in every province in Canada, as well as in Great Britain, Europe, the United States and Australia. There are now some eight hundred shareholders on the company's books, of whom 263 reside in British Columbia, 103 in Quebec, 100 in Europe, and 79 in the United States. The directors, officers, branch managers and members of advisory committees are themselves holders of over 6,500 shares. This company has maintained a continuous dividend at the rate of 8 per cent. annually since incorporation, and has, with current quarter's dividend, paid out since March, 1905, over half a million dollars, and has built up a reserve fund of $800,000.00.

Brazilian Traction, Light and Power Company, Limited.—The company's statement of combined earnings and expenses of the tramways, gas, electric lighting, power and telephone services operated by subsidiary companies, controlled by this company, for the month of May, 1914, was:—

	1914.	1913.	Increase or decrease.
Total gross earnings	$1,987,712	$1,990,910	— $ 3,198
Operating expenses	832,959	931,519	— 98,560
Net earnings	1,154,753	1,059,391	+ 95,362
Aggregate gross earnings from January 1st	9,777,523	9,636,194	+ 141,329
Aggregate net earnings from January 1st	5,584,032	5,152,689	+ 431,343

Consolidated Mining and Smelting Company.—The Consolidated Mining and Smelting Company of Canada, Limited, ore receipts at Trail smelter for the week ending June 18, 1914, and from October 1, 1913, to date, in tons, were:—

Company's mines—		
Centre Star	2,254	115,575
Le Roi	1,474	49,394
Highland	66	3,396
No. 1	258	4,319

Maestro	....	329
Molly Gibson	....	692
Other mines	890	57,494
Total	6,818	261,167

Hudson Bay Company.—At the Hudson Bay Company meeting Sir Thomas Skinner drew the shareholders' attention to the fact that the accounts were now presented in a simpler and more instructive form, showing the separate yield of the stores and fur business. Commercial depression, he said, had prevailed throughout the world to a greater or less extent, and Canada had suffered to a special extent. All branches of the company's business had been affected. The combined profits reached a total of £177,678, which, after expenses, left a balance profit of £86,636, and with the amount brought forward there was a total credit balance of £192,070.

The balance to credit of land account was £451,938. The quantity of fur received considerably exceeded the year previous, and if prices had been maintained the value would have been £495,000 instead of £369,000 actually realized. The stores' trade was not productive of good results, the excellent harvest being the saving factor in a very serious situation. Reports showed that another good harvest may be anticipated this year.

Sales of farm lands approximated in acreage to those of six years ago, but the price realized had increased 92 per cent., last year's price of 80 shillings being the highest attained by the company, notwithstanding that the lands sold had been inferior.

Instalments and interest were not being paid with their usual promptness.

Receipts for the present year's first quarter were £81,059 against £144,517 last year.

A shareholder expressed the opinion that the company was erecting palatial stores far ahead of requirements for many years.

The chairman said he did not agree. Never in the history of Europe or America had there been such an increase in population as in Canada recently, and the company had built for the future as well as for the present.

NEW INCORPORATIONS

Vancouver Dock Company Has Largest Capital of the List—Oil Permeating Western Provinces

Canada's new companies recently incorporated number 111. The head offices of these companies are located in seven provinces. The total capitalization amounts to $20,327,000, the largest companies being:—

Dominion Shipbuilding, Engineering and Drydock Company, Limited, Vancouver	$5,000,000
Pioneer Investment Company, Limited, Vancouver	1,500,000
Discoveries, Limited, Calgary	1,000,000
Western Securities Corporation, Limited, Calgary	1,000,000
Petroils, Limited, Victoria	1,000,000
Northern Trap Rock Company, Limited, Toronto	1,000,000
Hedley Shaw Milling Company, Limited, Toronto	1,000,000

Grouping these new concerns according to provinces in which the head offices are situated, we have the following results:—

Province.	No. of companies.	Capitalization.
Prince Edward Island	9	$ 820,000
New Brunswick	1	25,000
Quebec	10	1,658,000
Ontario	25	3,739,000
Manitoba	2	520,000
Alberta	28	4,520,000
British Columbia	27	9,045,000
	111	$20,327,000

The following is a list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The persons named are provisional directors:—

STATISTICAL STUDY OF WHEAT

Canada's Progress—Where the United Kingdom Gets Its Supplies

According to a valuable paper read before the Royal Geographical Society in London, by Mr. J. S. Unstead, Canada shows a remarkable development as a wheat producing country. The new wheat areas here, as in the United States, are confined to the west central provinces, Alberta, Saskatchewan and Manitoba, where a further considerable area suitable to the crop is still undeveloped. Mr. Unstead says that Canada should eventually attain a production equal to that of the United States. The very high consumption per head indicated during the last decade is probably due to the fact that much of the crop is fed to cattle.

The developments in Australia are less important than those in Canada and the yields are extremely low, but both area and yield increased in the last decade and allowed a substantial margin of production for export. New Zealand, which at no time had a large wheat area, is apparently still further reducing it in favor of pastoral work. The yield per acre is high and the consumption per head is remarkably so, the latter being probably partly explained by the fact that the production in New Zealand is liable to violent fluctuations; a world shortage in wheat has been reflected by a great outburst of production in New Zealand; following this, when prices have fallen, the produce has been unsaleable and much of it rotted on the ground.

Wheat to United Kingdom.

In the United Kingdom the area under wheat has decreased 37 per cent. during the period 1881-1910, while the yield per acre has increased 28 to 32 bushels, owing partly to the withdrawal of the poorer wheat lands from cultivation and partly to the improved seed and methods of cultivation. The imports have risen to supply the requirements of the population, the consumption per head remaining practically stationary. The relative proportion which imports bear to the total consumption has risen from 67 to 80 per cent. and there is every indication that this rise will be maintained in the future. With regard to the sources of the imports, the following table illustrates the changes that have taken place during the period, 1881-1910:—

Period	Russia	Roumania	Austria-Hungary	India	Canada	United States	Australia	Argentina
1881-1890	15	1	3	12	4	51	4	1
1891-1900	12	1	2	7	7	56	2	8
1901-1910	14	1	0	13	12	32	7	16

Percentage of Flour Imports.

It is seen that the supplies from the southern hemisphere rose from 5 to 10 and then to 23 per cent. of the total imports. This fact is important in so far as it has a steadying influence on the English markets by counteracting in part the effect of bad harvests in the northern hemisphere and by bringing corn to the markets at a different season of the year. The percentage of flour in the imports has decreased from 20 to 10 during the last decade, which is probably correlated with the decrease of the supply from the United States.

Taking the world as a whole there was an increase of about 300 million bushels (about 14 per cent.) from the first to the second period, but from the second to the third period there was an increase of nearly 700 million bushels (about 25 per cent.). This great increase was due mainly to an increased acreage, but to some extent (about 8 per cent.) to an increased average yield per acre, for while in the first two periods this was 12 bushels in the third period it rose to 13 bushels per acre.

In each period Europe has produced more than half the total crop. North America has come next, and Asia has been third. The other continents have produced a much smaller amount: South America has increased its importance because of Argentina, and Africa and Australia each produce the same small quantity. Theexamination already made of the conditions in the separate countries has led to the conclusion that the acreage may be considerably extended.

"SOLID AS THE CONTINENT"

Every year shows a marked increase in the number of policies for large amounts placed with the North American Life.

The fact is significant.

It proves that the Company's financial standing and business methods stand the test of expert scrutiny.

North American Life
Assurance Company
Head Office: - TORONTO, CAN.

A TIMELY THOUGHT
(From an Eastern Financial Journal)

During the last year or [illegible] Canadian business men have slept sounder [illegible] and been [illegible] to meet the problems and wear and tear of the following day because of their knowledge that if anything should happen to them during this time of strain, their insurance policies would provide ready cash for their families or dependents and prevent their business interests being realised at a sacrifice. Perhaps for the first time in their lives they have begun to realise what Life Insurance really means that it really is the [illegible] protection in the world.

And, if demand be the proof of excellence, the best in Life Insurance is to be found in the policies of

The second annual convention of the middle west federated boards of trade was held at Brandon. The following officers were elected for the ensuing year:—President, C. C. Smith, Carnduff; vice-presidents, Messrs. Jos. Cornell, Dr. D. P. Miller, Wapellan; Hon. James Johnson, Boissevain; E. B. R. Hall, Solsgirth. Members of the executive, Dr. H. M. Speechly, Pilot Mound; Messrs. J. W. Guthrie, Reston; G. Crozier, Lenore. Auditor, J. B. Bevridge, Brandon.

Any one who has been induced by the general wave of pessimism to believe that the nation is going to the dogs, should take a trip out into the country, forget the woes of business and rest his eyes on the yellow fields of grain and the ripening fruit that bends low the branches of the trees, is the advice of a San Francisco bank. Because there is where the money comes from, the money that supports the stores, erects the skyscrapers, and buys the clothes and ornaments, the automobiles and talking machines, and all the other commodities, from the manufacture or distribution of which the city makes its living.

DEATH OF WELL-KNOWN WINNIPEG CITIZEN

Mr. F. W. Heubach, who died at Winnipeg recently, was born at Ottawa, Ont., January 15th, 1850. His early business life was spent as secretary to C. J. Brydges, a then prominent railway magnate in eastern Canada. When Mr. Brydges was appointed land commissioner for the Hudson's Bay Company, with headquarters in Winnipeg, Mr. Heubach went west with him. This was in 1878, and since that time Mr. Heubach has resided at Winnipeg.

Until 1893 he retained his connection with the Hudson's Bay land department, when he retired and became manager of the Canadian Industrial Exhibition. Mr. Heubach was the founder of Winnipeg's annual fair, and he devoted much time and energy to the work. About nine years ago he went into partnership with Mr. W. J. Christie, financial agent, and subsequently organized the firm of Heubach, Finklestein and Heubach.

He was director of the Union Bank of Canada, and of Messrs. Alloway and Champion, Limited.

◆

RAILWAYS INVESTED FOUR BILLIONS

During the six fiscal years, 1908 to 1913, inclusive, the steam railways of the United States of Class I. invested in their road and equipment cash to the amount of $4,010,385,303. Railways of Class I., so designated by the interstate commerce commission, are those with annual operating revenues of over $1,000,000. They include about 90 per cent. of the mileage, receive more than 96 per cent. of the revenues, and handle more than 98 per cent. of the traffic.

This cash investment of the operating railways of Class I. of the Eastern District during the six years was greater than the amount of capital securities issued by them during this period, and was 19.9 per cent. of the aggregate of their capital securities outstanding June 30th, 1913; of the railways of the same class of the Southern District it was 21.1 per cent., and of the railways of the same class of the western district it was 23.2 per cent. of the aggregate of their capital securities outstanding June 30th, 1913. That is, the cash actually expended by these railways during the last six years upon their properties used in transportation amounts to more than one-fifth of their total capitalization at the close of the last fiscal year. This is at the rate of $668,307,551 per year.

These figures were compiled by the bureau of railway economics from the reports of the railways to the interstate commerce commission.

Crop Conditions — Winnipeg's Water Scheme — News from Other Points

Monetary Times Office,
Winnipeg, July 7th, 1914.

Perfect weather for seeding, followed by the best of growing weather during the spring months, with rain coming at just the right time has created an atmosphere of satisfaction among the farmers. This, together with the increase of over a million acres in the area under crop in wheat, oats and barley, forms the basis for the feeding of optimism which pervades business.

The building situation in Winnipeg continues to improve, the total building permits for the past six months ending June 30 last show a valuation of $10,082,400. The first six months of 1913 totalled $9,558,850. In 1912, the biggest year on record for Winnipeg building, June 30 showed a total for the first six months of $11,487,150. For the month of June last, the total value of permits issued was $1,560,200, as against $1,875,800 in 1913. In the building trades there is an ample supply of labor, large numbers of men having migrated to Winnipeg from other cities where less development is under way.

All parts of the country report demand for agricultural laborers.

Winnipeg's Water Supply.

The Greater Winnipeg Water District expenditure continues to grow apace. Activity is apparent in all departments of the scheme to provide Winnipeg and the surrounding municipalities with a new and ample supply of soft, pure water. The administration board has passed on expenditures for the month of July, which will bring the total already expended by the end of this month to a figure over $500,000. The expenditures for this month total $168,470. The pay roll will take $13,000, while supplies and equipment will require $3,000. On the contract for railway ties $32,300 will be paid; $59,000 on steel rails; $3,310 on steel splice bars; $54,000 on railway construction; $2,150 on residences for the divisional engineers, and $1,710 for switches, frogs and track accessories.

Before the month is concluded the $500,000 expenditure will be passed for by August, the total outlay will be $522,580.29. Plans for the aqueduct line beyond Range 7 will be completed, and work is now being rapidly carried on. This will conclude the determination of the exact line to be followed east as far as the Whitemouth River, which will be over half the way to Indian Bay at Shoal Lake. The route will not go in a straight line, but will have numerous angles and curves, as has the sanctioned plan for the Transcona reservoir site to the end of Range 7, twenty-four miles east of the city.

Winnipeg's light and power plant's receipts during June equalled those of May, when the total of $70,000 in cash revenue was reached.

People and Economic Conditions.

Mr. J. H. Ashdown, of J. H. Ashdown and Company, Winnipeg, has purchased fifty feet on Second Avenue, Saskatoon, for $43,650.

June building permits issued in Medicine Hat exceed the million dollar mark. Large structures on which construction was started during the month, include the technical high school, the Maple Leaf Milling Company's plant, large addition to the Lake of the Woods flour mill, Alexandra school addition, together with numbers of other buildings and private residences. The total for the month was $1,001,885, and the total for the six months of 1914 to date was $1,626,085. The total for 1913 for the first six months amounted to $1,363,225, or an increase of this year over last of $262,860.

The Hon. Geo. Langley, minister of municipal affairs, in an address to the delegates at the union of Saskatchewan municipalities' convention, held at Moose Jaw, pointed out that in the past cities had striven to increase their population without due regard to the development of the surrounding country, but that the people now fully realized that the economic conditions of the country demands that attention be given to the cultivation of land and the development of rural districts.

BRITISH EMPIRE TRUST

Exhaustive Review of Company's Position and Prospects

The thirteenth ordinary general meeting of the shareholders of the British Empire Trust Company, Limited, was held on Monday, June 15, at the Liverpool Street Hotel, London, E.C., Mr. T. Blundell-Brown presiding.

The Secretary (Mr. R. W. Bartlett, A.C.A.) having read the notice convening the meeting and the report of the auditors.

The Chairman said that Mr. R. M. Horne-Payne (the chairman of the company) had asked him to apologize for his absence, and to read the following address on his behalf: There is little of interest to add to what is in the report regarding our company's affairs during the financial year which ended on April 30. It was a year of disappointment and worry, of continuous loss from depreciation in the market value of our investments, and of constant hard work for small profits. I think that you will agree that the balance sheet we now submit to you discloses a strong position, and that we have come well through a very difficult year. During the past two years we have deemed it prudent to avoid taking up any new company, and have confined ourselves to assisting in the development of the enterprises with which we are already connected, and we shall continue this policy as long as the securities of our present companies can be bought on the Stock Exchange at low prices, and until the conditions of the money market make it possible to undertake new business without undue risk, and with the expectation of substantial profit. There are, I regret to say, two investments in our list which are causing us anxiety, namely, £6,380 of 5 per cent. first mortgage debenture stock in the Monterey Railway, Light and Power Company, and £27,210 of 5 per cent. first mortgage debenture stock in the Canadian North Pacific Fisheries Company. These stocks now stand in the company's books at £3,413 and £14,029 respectively. The troubles of the Monterey Company are exclusively the result of the political situation in Mexico, but for which it was proving itself a very satisfactory enterprise. It is at present impossible to form an opinion of what may happen from day to day, but up to May 29, the date of the last news obtainable, the contending parties had respected the company's property, and the loss to the company, beyond the loss of income shown in the monthly traffic statements, did not exceed a few thousand pounds. The troubles of the Fisheries Company are due to the reduced catch of whales during the past two years. The prices and demand for the company's products have greatly improved, and the cost of manufacture has been reduced, but whales have been caught in greatly reduced numbers. We are assured on the authority of the ships' captains that whales abound in as large numbers as in previous years, but that they have been prevented from hunting them successfully during the past two seasons by almost continuous bad weather. All I can say on the subject is that the result is most disappointing. I must also express my regret that the balance sheet of the Fisheries Company for the year 1913 is not yet available. Your company has repeatedly pressed for it in the most urgent manner, and we are advised by cable that it was posted from Victoria on June 2.

THE POSITION IN CANADA

As you are aware, most of your company's capital is invested in Canada, and you all know that Canadian investments have shared in the great fall in price which has taken place during the past eighteen months in stocks and shares of all descriptions, perhaps more severely than any other class of investment. I would like to point out to you that this depreciation is the result of monetary conditions all over the world, attributable to world-wide causes, and not to any failure of the anticipations held out respecting Canada's wealth in natural resources and industrial advantages. The land has not proved less fertile or the crops less bountiful than was anticipated, the recovery of gold, silver, copper, nickel, asbestos, iron, coal and other minerals has not been less than was expected; the product of lumber and paper pulp from the forests has not diminished; the innumerable mighty water powers are there to enable the cheap manufacture of all sorts of merchandise. The cause of the temporary fall in prices is exclusively financial. Canada needed people and still needs people to develop her marvellous natural wealth. These people need houses to live in and every other facility required for sanitary and civilized life, including transportation for their produce and supplies. To provide these facilities called for great sums of money at a time of scarcity, and the money markets of the world did not readily respond. Commitments became pressing, competition for money became acute, rates of interest rose, and the prices of securities fell correspondingly; investors were frightened and enterprises had to be temporarily stopped or abandoned. This affected trade of all sorts by reducing the purchasing and spending power of the public, and has affected in a greater or lesser degree the earning powers of the companies with which we are connected. For instance, in the spring of 1913 the Canadian Western Lumber Company had sufficient orders on their books to keep their mills employed for many months ahead. Suddenly, [illegible] of money in the country, not only did orders [illegible] in, but the orders that they had already received [illegible] in all directions. Canadian affairs culminated at [illegible] September in a difficult and dangerous financial [illegible] conditions have improved and they are [illegible]. I think this temporary check in [illegible] greatest benefit to Canada.

THE OUTLOOK

[illegible] extremely conservative basis [illegible] we may hope that lasting [illegible] the exercise of care and economy [illegible] and especially in the postponement of expenditure until the money to pay for it is actually in hand. No one can say how soon the former vigor will be restored to the march of Canadian development; but we can say with absolute certainty that within a very few years Canada will once again be full of progress and prosperity. Emigrants will have flocked to her shores until her population has doubled, her internal and external trade and her output of natural resources will have correspondingly increased, and your investments in Canada will command high prices. Immediate prospects depend considerably on this year's crop, of which the news up to the present from all parts of Canada is entirely favorable. I fear that during the last four months you have all heard the many disparaging statements about the Canadian Northern system and those responsible for it which have been put in circulation by a few paltry and unscrupulous enemies. Well, those statements and the whole of the affairs of the Canadian Northern have been the subject of a thorough and prolonged investigation by the Government of Canada, with most satisfactory results. Nothing further need now be said on that subject; but I should like to tell you that at no moment was the money invested in Canadian Northern securities in danger of loss, that the earnings are, and have always been, amply sufficient to meet all interest charges, and that the various debenture stocks of the Canadian Northern system are now still better secured than they were before, owing to the creation of £9,000,000 of Canadian Government guaranteed stock ranking after them. The Canadian Northern is now certain of immediate completion, and it is constructed in a manner that ensures as economical and rapid movement of traffic as any railway on the American continent, and its very great success can be regarded as absolutely certain. Before moving the adoption of the report and accounts I should like to give anyone the opportunity of asking questions.

Dr. May: On page 8 of the report I see that the reserve fund is £140,000. I do not know whether it amounts to rumor or whether it is only casual talk, but I have heard that the reserve fund of the company is invested in common stocks, which are valued at high prices. It would be satisfactory, I think, to have that matter cleared up.

The Chairman: The suggestion is absolutely false. The reserve is added to the share capital, and the whole is invested as stated in the report. The holdings of ordinary shares or stocks which are officially quoted are valued at the current quotation, and those that are unquoted are taken at a very low valuation, and do not exceed 2 per cent. of the total valuation of the company's investments.

STATEMENT BY MR. J. J. REID.

Mr. J. J. Reid: Mr. Chairman, I have listened with very great pleasure to the interesting statement of Mr. Horne-Payne, which, I think, is couched in language which is calculated to give confidence to the shareholders in the company. It may perhaps be of interest to my fellow-shareholders if I say a little upon the visit which I myself paid to the other side last year. Through the courtesy of the chairman of the company I had the opportunity of looking into the financial position of most of the companies with which we are connected. I was able to take an outside view, and I came away very much reassured and extremely satisfied with the position of the various interests of this company on the other side. When I was in Canada at the end of September and the beginning of October the financial acuteness or stringency was at its worst, and probably few people on this side have any idea of the extent of that stringency. At the same time, one felt, even in the atmosphere which one was breathing there, that, though there was undoubtedly temporary stringency, there was no idea in any shape or form that the position in Canada was really unsound. I think that, with the exception of a few ventures here and there which there must always be in connection with general financial commitments such as Canada has—the position may be described as eminently sound. We in this country forget that Canada must borrow enormously. The number of people that are going to Canada just now necessitates an enormous expenditure of capital, and that capital must be found if Canada is to go ahead. As Mr. Horne-Payne has said in his speech, the new people going into the country require suitable lighting, drainage, and everything of that sort, to keep the townships going; and, if there is any criticism that I could make at all about the position with regard to that, it is this—that here and there municipalities have undoubtedly gone ahead a bit too fast in building, we will say, expensive town halls and various things in anticipation of events. One cannot shut one's eyes to the fact that there is a certain amount of rivalry between various corporations in Canada, "A" thinking that he is equally important with "B," and that he must have a corresponding outfit with regard to a town hall and various other things of that sort. This, however, prevails only to a limited extent, and I think there is no great danger in that connection. That Canada must borrow still more is, I think, evident, but we must not think that, even although Canada is borrowing, it is in an unsound financial condition. As regards the question of the Government of Canada, one must remember that during the last few years it has amassed enormous amounts of surplus revenue which it has invested in such things as the Canadian Northern Railway and other enterprises.

THE CANADIAN NORTHERN RAILWAY.

As regards the question of our individual ventures, one thing I was very much struck with was the extremely able management which prevails in connection with practically all those concerns. Reference has been made by Mr. Horne-Payne, in his speech, to the Canadian Northern Railway. The position there, as he has said, has been absolutely straig[illegible] have no doubt that the line has [illegible] it. I had the pleasure of going over [illegible] line, and I was very much struck with [illegible] choice of the location. As has been stated [illegible] most important factor, perhaps, is the [illegible] line has from ocean to ocean—a factor [illegible] tend in the future to the economical [illegible]. Then I had the opportunity of going to V[illegible] ing the various interests you have there [illegible] Columbia Electric Railway, which is a [illegible] subject, of course, to difficulties which [illegible] experienced from the wages point of view. I [illegible] that you have a thoroughly sound and satisfactory [illegible]. The present harvest, as the chairman has stated, [illegible] to be good, and undoubtedly that will be the first [illegible] lumber industry. Mr. Horne-Payne has made reference to the Fisheries Company. I went down to see the Fisheries Company, and I think, from what I heard there, that the future is likely to be considerably better than the past, because of the [illegible] change of management and method of dealing with the company's affairs. Although the concern is of a decidedly speculative character, I think it is calculated in the future to give very good profits. We have, of course, various concerns spread all over Canada. The Canadian Western Natural Gas Light, Heat and Power Company is one that appealed to me very specially. When I was there I saw the plant being doubled for the production of the electric lighting for the corporation. Instead, as in the present installation, half of it being subject to coal production and half to natural gas production, they had abandoned altogether the coal, and were increasing the plant entirely for natural gas production. That, I think, is a most satisfactory feature. Your balance sheet, of course, does not indicate the particular companies in which our investments are made, but it indicates generally the lines on which they are made. That, of course, must commend itself to the shareholders as being really on excessively sound financial lines. I think one of the things on which we may congratulate ourselves is that all our interests are really conducted on a satisfactorily conservative basis. Therefore, if we have had to write down our investments this year—everybody has had to do so more or less during the last two years—I think we may congratulate ourselves that our loss has not been great. I entirely agree with the sentiment that the depreciation which has taken place is not a permanent depreciation, caused by factors which will affect us in future. I believe we shall very soon see a recovery to a certain extent. The full recovery, I think, will not come for some considerable time; it depends, of course, upon the outlook with regard to the general financial situation not only in Canada, but all over the world, and the necessity for capital being provided, for investors are not anxious to provide capital at the present moment. But the general tone of my remarks will be that having had, [illegible] at [illegible] returns [illegible] I desire to give [illegible] I think it would [illegible] I attribute [illegible] interest.

CHAIRMAN'S REPLY TO SUGGESTIONS.

The Chairman [illegible] very much to [illegible] their points [illegible] something about [illegible] Canadian Northern, but we will pass [illegible]. As to the question of conserving the company's [illegible] we are very careful [illegible]. I think we have shown [illegible] rather than [illegible] has raised a certain amount of [illegible] the one to pursue. Before putting the resolution I should like to thank Mr. Reid for his rather [illegible] remarks. Of course, as a rule, directors do not look for [illegible] when the results are not as good [illegible] have been in past years. As Mr. Reid has [illegible] said, the results are not caused by the failure of Canada or for the [illegible] of the concerns in which we are interested, but on account of [illegible] reasons which are certain, I think, to lift very soon. I sincerely believe that you may expect a return to prosperity in the future. I will now put the resolution: "That the accounts for the year ended April 30, 1914, and the reports of the directors and auditors thereon be received and adopted."

Major E. F. O. Gascoigne, D.S.O., seconded the motion, which was carried unanimously.

The Chairman next proposed: "That the payment of the dividend on the preferred ordinary shares at the rate of 5 per cent. per annum be approved."

Mr. N. Scott-Russell seconded the motion, which was unanimously agreed to.

The retiring directors (Major Ernest Frederick Orby Gascoigne and Mr. Dudley Northall Laurie) and the auditors (Messrs. Robertson, Hill and Company) having been re-elected and a vote of thanks accorded to the chairman (Mr. T. Blundell Brown), the proceedings terminated.

SINKING FUNDS ARE A TRUST.

Mr. S. P. Grosch, commissioner of the Saskatchewan local government board, in addressing the union of rural municipalities at Moose Jaw, said that seemingly little attention had been paid by some borrowing municipalities as to the methods by which their loans could be paid back. He enumerated the methods of repayment as follows:—The instalment method; the annuity method, and the sinking fund method, and then showed the relative cost of adopting these methods, using as an example a loan of $100,000 spread over 30 years, and basing the sinking fund at the statutory rate of 4 per cent. loan at 5 per cent.

The instalment method	$177,500 00
The annuity method	195,154 20
The sinking fund method	[illegible]

In the case of the sinking fund method the difference in cost may be made up by the careful administration and investment of the fund. He then stated that the sinking fund of one local authority was deposited in a savings account and earned 3 per cent., while the statutory basis of this fund was 4 per cent.

In investing sinking funds it should be borne in mind that they are trust funds, and should be administered as such. The keynote to all investments should be security rather than large returns. The investment should not be restricted to one kind of security, but should be in different kinds of securities not centred in one [illegible] but spread over as large an area as possible. Personally, Mr. Grosch was in favor of investing in the debentures of other municipalities, school districts and government securities rather than in mortgages.

ALBERTA LAND COMPANY

Makes Progress, Despite Adverse Conditions

The annual ordinary general meeting of the Alberta Land Company, Limited, was held at the Waldorf Hotel, Aldwych, W.C., June 8, Sir Robert Gresley (chairman of the company) presiding.

The Secretary (Mr. H. Cossins) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I presume you will, as usual, take as read the report and accounts, which have been in your hands for some days. You will see that the issued capital of the company at the end of the year amounted to £46,521, out of a total authorized capital of £60,000, an increase of £4,231; 8,795 shares have since been issued in connection with the purchase of Port Arthur (Current River) Estates shares, to which I will refer later, leaving available for issue a further 4,864 shares, the whole of which the directors now propose to offer to the shareholders for subscription at par. Below the item "premiums received on shares," which, I may remark, shows an increase of £2,273 5s. over last year's figures, you will notice an item of £10,100, being the amount of 7 per cent. debenture stock issued at the end of the year. This issue was made to provide funds for the construction department. I do not think the other figures in the balance sheet and profit and loss account need any special comment. The net profit for the year under review is £6,039 4s. 4d., which amounts to over 13 per cent. on the issued capital as at October 31. With the amount brought forward from last year we have a total sum of £9,034 6s. 2d. available for distribution. We propose to deal with this in the following manner. To pay a dividend of 5 per cent., which will absorb £2,765 16s., to place £4,000 to the share reserve account, and to carry forward the balance of £2,268 10s. 2d. Some shareholders may think that with the sum of £9,034 6s. 2d. available for distribution we ought to recommend a higher dividend. I wish to point out, however, that the whole of the profit we make is not a cash profit. It is our policy and practice to take a portion of our profit in shares of subsidiary companies. Last year the profit so made amounted to £2,600, and although we consider the shares in this case fully worth their face value, and hope they will be worth very much more in the future, we think it wise, in the absence of a market quotation, to put something on the other side in the way of reserve. For this reason, and in pursuance of our policy of building up the financial stability of the company, we have decided to make the substantial addition to the reserve already referred to. We have been passing through a time of much difficulty and anxiety in the world of finance, in which Canada, in common with other countries, has suffered, not in her case through any lack of real prosperity and progress or any unsoundness in her financial position, but through the check to which all young and progressive countries are liable —the younger and the more progressive they are the more they feel it—when the supply of capital, which is their life-blood, is temporarily restricted. It is, I think, a subject for congratulation, in the circumstances, that we have fared so much better than other companies engaged in similar business in Canada, and that we have earned a net profit of 13 per cent. on the issued capital.

PORT ARTHUR'S PROGRESS.

The company during the year purchased property in Port Arthur to the extent of £24,269, a considerable portion of which has since been sold at a good profit. The real estate market in Port Arthur, as elsewhere in Canada, was in a state of comparative quiescence during the year, but the statistics with regard to building activity, etc., show that there was much less stagnation in Port Arthur than in most other Canadian cities. The value of the exports and imports of Fort William and Port Arthur, which are so closely connected as almost to constitute a single port and city, amounted for the 1913 season of lake navigation to nearly £65,000,000, a total which appears in the list published to be only surpassed by that of New York, London, Liverpool, Chicago and Duluth, and to exceed that of Manchester, Montreal, Southampton and Glasgow. From this you will be able to realize the remarkable progress already made by these cities and the great future that lies before them. I am glad to state we were able to transact a very considerable business during the year on behalf of our clients. You will see stated in the report that the total of such transactions amounted to "upwards of £100,000." We had not the exact figures at the time the report was made, but have since received a cable from our manager, from which it appears that the total was £135,894. The period of quiescence in the real estate market, which still continues, is bound to be followed—unless all previous experience is belied—by a period of active advance, and there are signs that the change is near at hand. For instance, I may mention that the building permits of Port Arthur, which are a safe index of progress, show for the month of April an increase of 55 per cent. over last April's total. The present therefore is a most favorable opportunity for investment in real estate, and I hope our shareholders and clients will bear this in mind, and not wait until the advance is in full progress, when they will doubtless have to pay much higher prices than at present. With the object of avoiding the unnecessary expense of a double administration, we have had under consideration for some time the question of an amalgamation with Port Arthur (Current River) Estates, Limited. As a first step towards this amalgamation, we have since October last purchased at par all the shares of Port Arthur Estates, Limited, not already held [illegible], the shareholders of that company, who have subscribed [illegible] the purchase money for an equivalent number of [illegible] of this company at par. The position is now that we own [illegible] of Port Arthur Estates, Limited, amounting [illegible] in the two years of its existence [illegible] amounting to 45½ per cent. on [illegible] at the rate of 22¾ per cent. per annum. [illegible] with the other company as soon as arrangements [illegible] outstanding debentures. The [illegible] for the redemption of the [illegible] on a cost price basis, to over £30,000, which gives a value to the shares of about 30s. each. I need hardly say that their actual value is very much greater, but even valued at that low figure you will see that the transaction is equivalent to the taking up of 8,795 shares of this company at a premium of 10s. each.

IMPORTANT CONTRACTS IN HAND.

The gross profits made by the construction department amounted to £6,065 19s. 1d. The overhead expenses, I am sorry to say, somewhat exceeded our estimate, but that is often the case when a new line of business is being organized. It was in part due to the fact that additional capital was raised and certain expenditure was incurred with a view to undertaking further contracts which have since been obtained, and the benefit of which will be felt in the future. We expect, therefore, that the department will show much better results in the present and subsequent years. As you will see from the report, we have now contracts in hand amounting to a total of about £220,000, on which it is estimated a net profit of over £20,000 will be earned. The principal contract undertaken is the construction for the Dominion Government of a jetty at the mouth of the Fraser River, British Columbia, on which we are working in conjunction with the Pacific Dredging Company, Limited, and the British Columbia Transport Company, Limited. As an instance of the delays that occur in connection with such contracts, I may mention that we submitted our tender and made all arrangements for the necessary capital in October last, but were only definitely awarded the contract last month. It is estimated that the work on this contract will be completed within two years. By extending our operations to British Columbia we hope to obtain a large share of the contracts for harbor works, which have been already sanctioned to meet the needs of the additional shipping business expected as a result of the opening of the Panama Canal and the completion of the two new transcontinental railways. We consider that we are fortunate in having formed a working connection with two companies of such high standing, whose assistance in obtaining and carrying out contracts in the future will be of great value. In order to keep the construction business entirely separate from the land business of the company, and for the sake of convenience of administration, we decided last year to undertake all future construction work under the name of "Marsh, Hutton, Powers Company," which has a separate entity, but is entirely controlled by this company. The date on which our financial year terminates, which was fixed before our construction department was organized, is an unsuitable one as far as that department is concerned. Work in connection with building contracts is usually commenced in the spring of the year, when it first becomes possible to put in foundations, and the buildings are not as a rule completed much before the following spring. Our manager in Canada has, therefore, suggested that it would be more convenient to terminate the company's year on April 30, instead of October 31. In view of the expansion of the business of the construction department and the obvious inconvenience of October 31 as the date of termination of the year, we have decided to accept our manager's suggestion, so that the company's year will in future terminate on April 30, and the next report and accounts will cover the period of eighteen months up to April 30, 1915.

LARGER COMPANY FORMED.

Turning to Haysport, our property in the north of British Columbia, as foreshadowed in my speech last year, we have formed a larger company—the Skeena River Fishing Company, Limited—to take over the fishing and cold storage business, and have greatly enlarged and improved the plant at Haysport required for its operations. This plant was practically completed a month ago. At the present moment the price at which fish is selling is not very remunerative; but the depression in the market is believed to be only of a temporary nature. The new company is opening up important markets in Canada, and the directors have reason to believe that a remunerative market will be found for their fish in this country, the first consignment of 30,000 pounds of halibut having arrived in Liverpool last week. Although the metals have been laid connecting the eastern and western portions of the Grand Trunk Pacific Railway, which passes through Haysport, there are as yet no facilities provided for shipping fresh and frozen fish, which has still to be shipped to Vancouver, and thence to the markets in the East. It is expected, however, that the railway will in the course of a few months be in a position to accept freight, when a great saving in expense and time will be effected, and the company will be placed in a very advantageous position as compared with other companies which have their headquarters at Vancouver. We feel that we have now succeeded in establishing the fishing and cold storage business on a sound basis. We have an efficient manager, who has been trained in the business, and a Canadian board of directors consisting of Mr. Herbert Draney, of Vancouver, a well-known cannery manager, Mr. E. C. Traves, of New Westminster, manager of Messrs. P. Burns and Company, one of the largest firms of Canadian purveyors of provisions, and Mr. W. Hamar Greenwood. These gentlemen are in a position to give invaluable assistance in the management of the business. I am happy to say our relations with both the Provincial and Dominion Governments are excellent. We have been granted by the latter a cannery license, which in view of the small number of canneries which are permitted to operate and the large profits that are made in the industry, is considered a very valuable asset. A company formed to establish and operate a cannery at Haysport, which is reported by experts to be unrivalled as a site for that purpose, will, I believe, have every prospect of success, and will help this company by further developing our Haysport property. One difficulty we have felt greatly in the past—that of a dual ownership—I am glad to say is now at an end, as we have succeeded in purchasing the half-interest in the property owned by Messrs. [illegible] Freer. It is obvious that this company [illegible] be in a much better position [illegible] the property, and to put the fishing [illegible] remunerative basis. I am glad to [illegible] year, during a short visit to Port Arthur, an opportunity of inspecting the company's property [illegible] progress. I formed a very favorable [illegible] the prospects of our business in that [illegible]. I was unable to proceed to British Columbia, but Mr. [illegible], who went to Canada a few weeks earlier in the year, visited Westport and New Westminster, where we have interests, as well as Port Arthur. Another director (Mr. MacDonald) has only recently returned from Canada. In fact, the issue of our report and accounts and the holding of our general meeting were specially delayed in order that we might have the advantage of the latest information from Mr. MacDonald on his return. During his visit to New Westminster he was able to bring the negotiations with regard to the Government contract to a satisfactory conclusion. I think we are much indebted to Mr. MacDonald for his services in that matter

A FURTHER SHARE ISSUE

As stated in the report, we have decided in order to take advantage of excellent business opportunities, to offer to shareholders the remaining 4,864 shares of the company for subscription at par pro rata to their holdings. Directors and shareholders have already signified their intention of subscribing for a considerable number of these shares, and the other shareholders I have no doubt will similarly take advantage of their rights. It is a matter of regret that we cannot offer shareholders a larger proportion of shares on the same basis, but until we increase our

DEBENTURES FOR SALE

DEBENTURES FOR SALE

BROADVIEW, SASK.

Sealed Tenders addressed to the undersigned will be received up to six o'clock on the 20th day of July, 1914, for the purchase of $18,000.00 debentures for the installation of a Gas-Producer Electric Light Plant. The debentures bear interest at 6 per cent., and are repayable in fifteen equal annual instalments of principal and interest (viz., $1,85[illegible]).

The highest or any tender not necessarily accepted.

A. SINCLAIR,
Sec.-Treas.

$1,155,950.17.

CITY OF OTTAWA.

DEBENTURES FOR SALE.

Tenders addressed to "The Chairman of the Board of Control," and marked "Tenders for Debentures," will be received by the City of Ottawa until 3 p.m., on Friday, the 14th August, 1914, for the purchase of $[illegible] 10-year debentures; $550,571.11 20-year debentures; $[illegible] 30-year debentures.

They are all a liability of the City at large, $965,950.17 bear interest at 4½ per cent. and $190,000 bear interest at 5 per cent.

Interest payable 1st January and 1st July.

Two separate tenders will be received, one for $190,000 30-year debentures, and the other for the remainder of the debentures $965,950.17.

All tenders must be on the official form. The tender for the $190,000 debentures must be accompanied with an accepted cheque for $1,000, and the tender for the $965,950.17 debentures with an accepted cheque for $[illegible].

Accrued interest from the 1st of July, 1914, must be paid in addition to price tendered.

The debentures will be made payable in Ottawa, New York or London at the option of the purchaser and in denominations to suit.

Delivery of the debentures can be made within one month if required.

The highest or any tender not necessarily accepted.

Full particulars, together with further information and official forms of tenders can be obtained [illegible] the City Treasurer.

Signed, TAYLOR M[illegible]

DIVIDENDS AND NOTICES

TIMBER SALE.

Tenders will be received by the undersigned up to noon of the 15th day of July, 1914, for the right to cut the Red and White Pine timber on berths 1, 2 and 3, Township of Blyth, in the District of Nipissing.

For maps and conditions of sale apply to the undersigned, or the Crown Timber Agents at Sudbury and North Bay.

W. H. HEARST,
Minister of Lands, Forests and Mines.

Toronto, May 4th, 1914.

N.B.—No unauthorized publication of this notice will be paid for.

PENMANS, LIMITED

DIVIDEND NOTICE

A quarterly dividend of 1½ per cent. on the Preferred Shares of the Capital Stock of this Company has been declared, payable August 1st, 1914, to Shareholders of record of July 21st, 1914; also a quarterly dividend of 1 per cent. on the Common Shares of the Capital Stock of this Company has been declared, payable August 15th, 1914, to Shareholders of record of August 5th, 1914.

By order of the Board,
C. B. ROBINSON,
Secretary-Treasurer.

Montreal, June 24th, 1914.

TENDERS FOR ALLAN WATER RIVER WOOD LIMIT.

Tenders will be received by the undersigned up to and including Wednesday, the 15th of July next, for the right to cut ties from Spruce, Balsam, Banksian or Jack Pine, Poplar and Whitewood trees seven inches and upwards in diameter two feet from the ground sufficient to supply a tie preserving plant for a period of twenty-one years from unoccupied, unsold and unlocated lands of the Crown tributary to what is known as the Allan Water River, tributary to the Grand Trunk Pacific Railway in the District of Thunder Bay.

Tenderers shall state the amount they are prepared to pay as bonus in addition to the Crown dues of $2 per thousand feet board measure for anything not manufactured into ties, and for ties at the rate of 5c. each, or such other rates as may from time to time be fixed by the Lieutenant-Governor in Council.

Such tenderers shall be required to erect within the limits of the territory covered by the right to cut ties, or at some other place approved by the Lieutenant-Governor in Council a tie preserving plant.

Parties making tender will be required to deposit with their tender a marked cheque payable to the Honourable the Treasurer of the Province of Ontario for $25,000.00, to remain on deposit as security for the carrying out of the conditions of their tender.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

W. H. HEARST,
Minister of Lands, Forests and Mines.

Toronto, Ontario, [illegible] April, 1914.

Timber Concessions in the Province of Quebec

Notice is given by the Government of the Province of Quebec that, on the 11th of August and on the 20th of October, 1914, permits to cut timber on over 8,000 square miles of crown lands will be offered at public auction.

The territory to be disposed of comprises some 1200 square miles in the basins of rivers Ottawa, Harricana and Bell, in the Abitibi region; 6,000 square miles in the Lake St. John northern region; 350 square miles in the Lake St. John East agency; 242 square miles in the Matapedia division.

On the first ate above mentioned, permits will be offered at ordinary conditions on some 3,000 square miles.

The timber grants advertised for the 20th of October, comprising the basins of three large rivers in the Lake St. John region with considerable water powers, will be subject to the obligation of manufacturing the wood into pulp or paper within the Province of Quebec.

For particulars, please apoly to the Department of Lands and Forests, Quebec, Canada.

ELZ MIVILLE DECHÊNE,
Deputy-Minister of Lands and Forests.

Quebec, 11th April, 1914.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

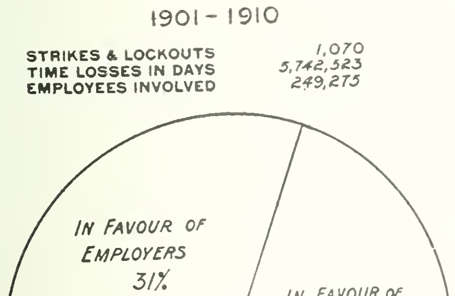
Closing the Capital-Labor Gap

SOME *Considerations of the Economics of a Two Million Days' Waste of Time Due to Strikes — Why Men Fought Capital and How they Fared — Development of Organized Labor.*

THE worst deduction to be drawn from strike records in the Dominion, according to Deputy Minister Acland, of the Labor Department, Ottawa, is that the great prosperity of twelve recent years would have been yet greater could Canada have escaped its share of the industrial tumult falling to the nations of the world. Mr. Acland recently completed an investigation concerning strikes and lockouts during the twelve years from 1901 to 1912. In view of the population and the industrial strength of the country, Canada's figures of labor disputes have been large enough. In the period under review, the strikes numbered 1,319, an average of 110 annually. There were 319,880 employees concerned in these strikes. The time losses in strikes during the twelve years reach nearly nine million working days and would represent, it is suggested, at $2.50 a day, an annual loss to the workers of about $1,900,000, or a total estimated loss for the twelve years of about $22,000,000. The Ottawa investigators do not figure the financial loss to the employers, which is usually large, as a result of labor disputes. The strike is an unfortunate incident in the industrial world. In this country, such troubles fall on special classes of workers. As Mr. Acland's report points out, coal mining and the building trades stand out in strong relief as those industries which are most afflicted with disputes. It is in connection with organized labor rather than unorganized labor that strikes chiefly occur. The reason is obvious. A strike means unity of action, which is impossible without organization. Wage-earners are seldom inclined to enter on a struggle with their employers until a degree of organization is found in their ranks. The situation is fairly reflected in the very large proportion found of strikes concerning union recognition, or some aspect of union recognition. It will, it is true, frequently happen that union and non-union employees are both concerned in a particular strike. The unionists even may be sometimes in a minority, but, being organized and including inevitably the more aggressive spirits, they will often largely control the action of the employees as a whole.



RESULTS OF STRIKES.

The following table shows the numbers of strikes and disputants and the amount of time losses measured in working days year by year for the period 1901-1912:—

Year	Disputes	Establishments concerned.	Employees affected	Approximate time losses in working days.
1901	104	273	28,086	632,311
1902	121	420	12,264	120,940
1903	146	927	50,041	1,226,500
1904	99	575	16,482	265,004
1905	89	437	16,223	217,244
1906	141	1,015	26,050	359,797
1907	149	825	36,224	621,962
1908	68	175	25,293	708,285
1909	69	397	17,332	871,845
1910	84	1,335	21,280	718,635
1911	99	475	30,094	2,046,650
1912	150	989	40,511	1,099,208
Total	1,319	7,843	319,880	8,888,381

The following table shows the same information classified by the industries concerned:—

Class of industry.	Disputes.	Establishments concerned.	Employees affected.	Approximate time losses in working days.
Fishing	11	21	14,127	203,488

Miscellaneous	55	200	5,764	79,803
Total	1,319	7,843	319,880	8,888,381

Value of Organized Labor.

The value of highly organized labor bodies seems to be proved by the Canadian figures. The obviously sane way to adjust labor disputes is by arbitration, without allowing the wheels of industry to stop or the wage-earner to cease drawing his pay. The upper grades of railroad workers—engineers, firemen, conductors, trainmen, telegraphers, etc.—stand perhaps at the apex of organized labor, having achieved that most desirable of industrial systems, that of working under agreement, and having learned the further valuable art of renewing these agreements, modified or otherwise, without cessation of work. The facilities for arranging working agreements in the case of these great railroad brotherhoods are superior in a measure to those open to many other classes of workmen because of (1) the good relations that fortunately exist between the great railroad companies and the unions, and (2) the relatively small number of employers with whom it is necessary to treat—the great railroads in any case set the pace in these matters.

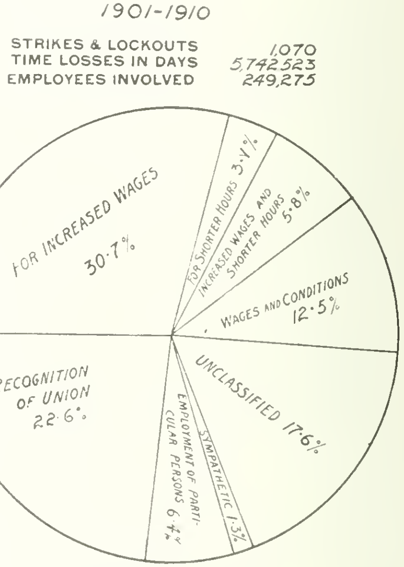
One important fact, however, which stands out in the Acland report is that during the twelve years under review there has been but a single strike in which any one of the five railroad brotherhoods indicated has been concerned. In other words, of the thirteen hundred strikes recorded in Canada during twelve years only one is debited to railroad engineers, railroad firemen, railroad conductors, railroad trainmen or railroad telegraphers. Regarding this, Mr. Acland says: "While, therefore, it is on organized labor that the strike burden chiefly falls, some branches of labor, and these the most highly organized, appear to have largely eliminated the strike as an actual experience. Those who have been behind the scenes in connection with these matters will be aware that even here the menacing figure of the strike is found none the less somewhere in the background and there plays its part in the preliminary negotiations."

Strength of Labor Unions.

The [illegible] union membership in Canada is in round [illegible], while the total of wage-earners is about [illegible], placing organized labor at about eleven per cent. [illegible] Large classes of labor fall outside the scope of unionism. Somewhat over a third [illegible] Canada is included in the callings [illegible] by the census bulletin as "manufacturing"; the census bulletin, which was issued in August, 1912, placed the number of those contained in this class at 550,000. The term "manufactures" is, however, there used in an unusually broad sense, and within this division of wage-earners would fall a considerable amount of organized labor; but the wage-earners included in the manufacturing division alone greatly outnumber the trade union membership in Canada.

Of wage-earners remaining thus practically unaffected by organization, equalling, as has been seen, eighty-nine per cent. of all wage-earners, it may be said that the lack of organization is found chiefly, and quite naturally, on the part of unskilled labor, though there are some important exceptions. Farm labor and the class of workers described generally in census and other returns as "laborers," that is, men without technical instruction of any kind, alone comprise about one-fourth of all male wage-earners, and these are wholly without any system of organization. Female workers again are but slightly organized in Canada. The number of women workers in Canada is shown by the census figures to be about one-fifth of the total, and may be placed for the year 1912 at about 290,000 out of the estimated total of wage-earners of 1,300,000. The extent of organization among women workers is not easily ascertainable, but the information collected shows that the industries which have been organized include comparatively few women workers; the exceptions are found chiefly in the manufacturing group. In the census of 1901, it may be remarked, about one-half of the then female workers fell within the domestic and personal classes and rather less than one-third were found in the "manufacturing" callings; presumably when the census figures for 1911 become available it will be found that the proportions on this point have not materially changed.

Time losses are the best gauge, perhaps, to the seriousness of strikes. The year 1911 was exceptionally high in time losses, showing, at 2,021,440 wasted days, twice the volume of time losses recorded for any other



TIME LOSSES BY CAUSES.

year. The wage-earners for that year are estimated at slightly under 1,300,000, and the possible working days for 1911 may be, therefore, placed at 390,000,000. This estimate allows an average of 300 working days a year to each worker. Analysis shows that these time losses of two million days were no more than the one hundred and ninety-fifth part (1 95) of the number of days worked, or, putting it in another way, if spread evenly over the whole wage-earning population of Canada, the time losses by strikes for 1911 would represent a loss per worker of a fraction under two days. For 1912 the figure representing time losses, as against number of days worked, dwindles to less than one day per worker; the time losses were only fifty per cent. of those of 1911, and the industrial population had grown.

Wage-earners and Time Losses.

It is interesting to compare the figures of time losses from strikes with those of possible working days of the wage-earning population. The year 1911 was, as noted, exceptionally high in time losses, showing, at 2,021,440 wasted days, twice the volume of time losses recorded for any other year. The wage-earners for that year are estimated at slightly under 1,300,000, and the possible working days for 1911, may be, therefore, placed at 390,000,000; this estimate allows an average of 300 working days a year to each worker. Analysis shows that these time losses of two million days were no more than the one hundred and ninety-fifth part (1 195) of the number of days worked, or, putting it in another way, if spread evenly over the whole wage-earning population of Canada the time losses by strikes for 1911 would represent a loss per worker of a fraction under two days. For 1912 the figure representing time losses, as against number of days worked dwindles to less than one day per worker; the time losses were only fifty per cent. of those of 1911, and the industrial population had grown.

The time losses for the twelve years covered by the report reach the sum of 8,888,381 days. It is a formidable figure, and there is danger for the moment of overlooking the fact that it must be divided first by twelve, to secure the yearly average of 740,698 days. In the above analysis the comparison was made for the two highest years when the time losses were far above the average; the average percentage for the complete period, therefore, of time losses to possible work-days sinks accordingly.

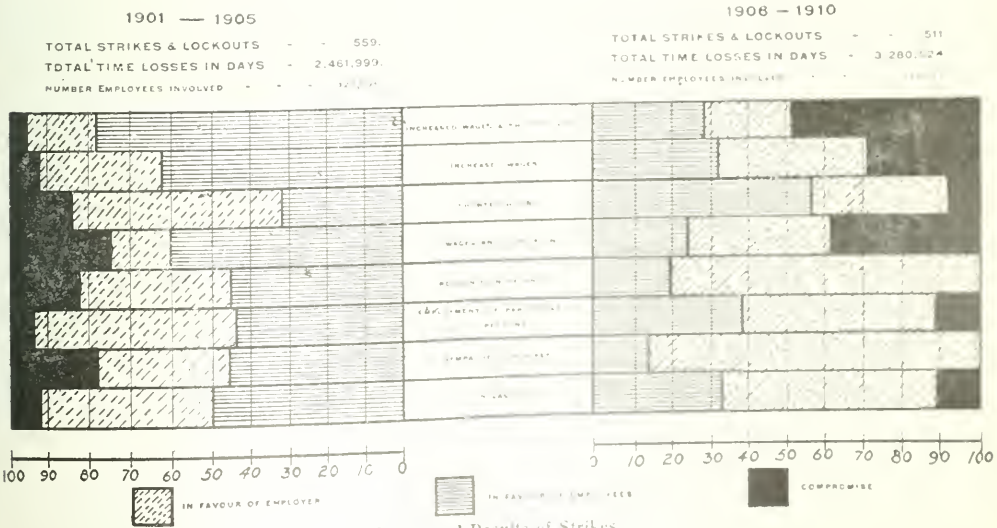
Does Not Justify Despair.

These figures, the government authorities think, tend to show that, however largely the problem of industrial disputes may loom in the public mind, and, however acute may be sometimes the inconvenience, injury or loss resulting from them in a particular locality, yet the net sum of the losses which may be directly debited to industrial disputes does not justify dismay or despair; and is but an item in a year's industrial account. The mass of wage-earners works steadily on, and is affected only as part of society at large. This, at least, is an optimistic view of the question.

Strike Causes and Results.

Labor organizations have become a strong political factor in Canada. In the drafting of the workmen's compensation act for Ontario, they played a leading role and obtained practically every concession requested in regard to that legislation. A lawyer remarked at the time that the labor element seemed to have mesmerized the cabinet ministers!

One of the most interesting studies in the government report is in connection with the causes and results of strikes. During the whole period the question of recognition of union has been prominent. From 1901 to 1905 it accounted for 17.2 per cent. of the time losses. In 1906-1910 for 26.7 per cent. Taking the whole period, it accounted for 22.6 per cent. From 1901-1910, demands for increased wages were responsible for 30.7 per cent. of the time losses. During the same period 31 per cent. of the strikes and lockouts were settled in favor of the employers and 34 per cent. in favor of the employees; indefinite conclusions and compromise accounted for the remainder. The accompanying charts will well repay close analysis and reveal some further interesting facts.



Causes and Results of Strikes.

PSYCHOLOGY OF INVESTMENT

Poetry and Its Relation to the Rush to Put Dollars Into Strange Hands

BY STEPHEN HUTCHINGS.

[The following dissertation in psychology, showing the bearing of mental conditions upon investment actions, is specially contributed to *The Monetary Times* and may be useful to those who are contemplating the Calgary oil flutter. It gives some reasons why poetic immanence does not make for investment safety and discusses the fetish of make believe.]

When David said that all men were liars he revealed himself as an artist in humanity, and he should have allowed the judgment to stand in all its nakedness for the children of men to read. But being a creature of impulse he retracted and accused himself of haste which showed a defect in his art. If ever there were a poet, David was he; proved in the merit of his singing and the riot of his life. Without a poet's mind he could never have pursued Bathsheba (having a seraglio of wives), nor have had the passion to murder Uriah. A whimsical despot, he was not above vulgar intrigue, and although it was by an unfortunate incident that he became enamoured of her, he was verily in love, and *ipso facto*, a poet. He called men liars from true poetic divination, which is another name for introspection. He knew men because he knew himself as far as himself was knowable and had he pondered more he would, doubtless, have been in no hurry to charge himself with haste on the historic occasion in question.

Lying and Poetry.

In a sense, all men *are* liars, or, to employ a euphemism, poetic licensees. And a liar is essentially a poet, the difference between lying and poetry being merely one of degree. But, it must be understood that all poets are not liars in the meaning of wickedness, although falsehood may burden the privy conscience of an occasional individual. I daresay many of my readers lack the lyric gift, but if they go into the May woods, among the wild hyacinths that shine like colored wax, and the livid sprays of green on the black branches, feeling the spirit of such beauty, they are poets, just as much as are they who warm to the sweetness of a child's face or are flooded with emotion at a sonata or sunset.

Who has never built a castle in the air and ravelled his hours in a stupor, dreaming blisses the sweeter for their vanity? We all stand impeached, for surely all of us, at some instant, have thus evaded cold facts and felt the spirit of poetry, even if, deserving well of our friends, we have not put it forth in verse. The greedy miser, whom we scorn so heartily, is pre-eminently a poet: he revels not so much in the substance of his hoard as in the power and beauty it represents, power and beauty that would do him good service would he more of a materialist and less of a poet.

Also the Promoter.

From the countryman who starts at a shadow in the hedgerows to the promoter who sees gold in iron pyrites, men are born poets. The first is innocuous, and no matter how keen his imagination may be, there is small mischief in his story if his friends share his superstitions. His ghost may have been the arm of a willow waving in the wind, but admitting that, he is still justified in his fright, because he has been brought up on eerie things. Moreover, his devil or hobgoblin, however he describes it, does good rather than harm in making him and his companions more careful livers for the future. But the promoter, being much more astute, with wider knowledge and a nimbler head, promptly turns the pyrites into potential cash.

He [illegible] the minds of his fellows. He knows their credulity, or rather, poetic optimism, and begins to work [illegible] with his stock in trade, humbug. He sees them [illegible] the world of finance with wide, [illegible] he gives them a metaphorical [illegible], and encourages them to make [illegible].

He [illegible], and they believe him, while [illegible] that, after a time, he [illegible] radiates from him as heat from a stove, and so insidiously warms up those about him that they beam with the same poetic fire, and cherish happy visions of success against the day the subscription lists open, when the shekels pour in and they may pocket their various commissions.

Twist for Figures.

Often he is as childlike as his victims, maybe a little older in the ways of the world, with perhaps a sophisticated twist for figures. He need not be deliberately wicked, but just an optimist with a shade too much of poetry in his make-up. Mr. H. G. Wells gives us an inimitable portrait of the genial, fundamentally simple, but none the less for that parasitic, promoter in the character of Ponderevo in Tono-Bungay. Safely insulated from the public and its money-grubbing activities in the quiet English country-town, dreaming his dreams and fretting away for many wistful moons in his little chemist's shop, nursing his one passionate, poetic idea of fortune, he is harmless and loveable; but once in contact with the outer world he floats his idea and gets sordid.

The human optimist becomes the innocent octopus, and we imagine him, without so much as a fleck of evil in his heart, climbing his mountain of gold in loud check trousers and mopping his face at the top, quite oblivious of the harm he is doing and has done. He died breathing of innocence, even as Whitaker Wright declared his innocence just before his trial and tragic death; and there was a great deal of truth in what Wright said of himself and those gilded aristocrats who pretended to have been his dupes.

Many Kinds of Promoters.

I have met many kinds of promoters: Some rigorously honest, but all full of inspired hope and buoyant fancy. In itself this is brave, but it leads to overmuch indulgence in colorable imitation and counterfeit. There is, indeed, too high a percentage of counterfeit and palpable coloring in finance, and the danger to the investor, whether an expert or otherwise, lies in his measure of poetic immanence and his tendency to add his own hues to whatever is in the picture. Too often imagination is given full rein, and the idea of fortune, playing on the intelligence like summer lightning, in a sequence of startling flashes which give vivid impressions, leaves the pilgrim blind to grope along the devious, pit-set paths of finance as best he can. What wonder then that all stumble and so few find the way?

Many Things to Trust.

The possession of a poetic soul inclines us to accept a good many things on trust. Tender himself, the poet takes an altruistic view of all things. Nature, the hard, the bloodthirsty, the violent, is his tender mother; he tells the rose of her soft fragance with a poisonous thorn deep in his thumb; he hails the bleak winds of March that bite him to the marrow as merely boisterous playfellows, harbingers of spring; and he beams on the gutter whelp who smithers a window under his very nose as an obedient boy who is doing as nature bids him in being a boy and breaking things, which is the privilege of healthy boyhood. This is, indeed, taking it kindly, like Saint Aloys, that Bishop of Blois of whom Ingoldsby sung, who was incapable of hurting anything that God made and suffered the vermin to swarm in the seams of his cassock.

In this age of rough competition and feverish commercial antagonism, when the spirit seems to be, Each for himself and the Devil for the Lot, a truism of this sort isn't much practised, excepting by people out of their spheres; people who, knowing nothing of the science of money or the art of its investment, swallow avidly all they are told by interested counsellors and rush to put their dollars into strange hands, the while living in ecstacies of poetic optimism until the tide ebbs and their dollars and dreams are borne away.

Optimism is a great gift, but it must not be licensed when making investments (not speculations, mark you), for investment deals only in figures and fact. The expert, of course, may please himself, but the occasion may arise when he will need to restrain his poetic immanence. Anyhow, now he knows what a gift he has, it is to his own behoof to learn to bridle it.

(To be concluded.)

◆

The city of Kamloops, B.C., has opened a public market.

LONDON IS TIRED OF DOING NOTHING FINANCIALLY

(The following cable messages of the Canadian Associated Press and the Montreal Star are printed by special arrangement.)

FINANCIAL LONDON PACKING TRUNKS

Hub of the Money Markets is Thinking of Holidays—Loan Results

(Staff Correspondence).

London, July 2nd.

Financial London is beginning to think about holidays July is here with sunshine, the summer resorts are advertising, and the market is dull, very dull. The stock exchange members might just as well have a vacation off the exchange as on. Financial London, therefore, will soon pack up its trunks, having had enough Grand Trunks and other incidents. Even the city editor of the London Observer shows yawns in his column. For instance, yesterday, he asked: "What is there new to write about? If there is anything very noteworthy we regret that we have failed to discern it. Markets are as they were; not as they would be. Most of them would like to go ahead. They fidget ahead a bit and then stand still. Puny "bears" utter their little discordant grumblings, but nobody heeds them. Everybody has one eye on Ulster and the other on July dividends. In the ordinary way the release of these dividends might mean market revival."

Poor Loan Results.

To look for signs of investment activity in underwriting spheres is a disappointing job, too. In getting its issue of £1,000,000 of stock over-subscribed, the Port of London Authority, as one authority puts it, "must consider itself very lucky." That has not been the experience of other borrowers who have since appeared on the market. The city of Keiff loan was applied for only to the extent of 18 per cent., leaving 82 per cent. in the hands of the underwriters. Nor did the sale of Borax Consolidated Deferred shares attract the support expected, the underwriters being called upon to take up 40 per cent. of their commitments. The South African loan also went badly, 64 per cent. of the issue being left with the underwriters. As is known, a large share of the Canadian loan went to the underwriters. A Canadian banker here tells me, however, that the Canadian scrip is now being well taken by investors, and will probably be absorbed altogether within another two months.

Two Big Loans Coming.

Two large loans are hanging over the market, the French and the Brazilian. They will be for heavy amounts. The subscription list of the great French national loan of 800,000,000 francs or £32,000,000, will open on July 7th, and the issue price for each 100 francs will be 91 francs. It has been underwritten several times over. Negotiations regarding the Brazilian loan will be continued next week with the Rothschilds. When these loans are out of the way, financial London will probably buy its railroad tickets for the seaside.

The Grand Trunk Railway Company have sold £2,000,000 bills on a 4¾ per cent. basis, secured on Grand Trunk four per cent. debenture stock, and repayable on July 15, 1915. The money is required for the financing of the Grand Trunk Pacific Railway and various branch lines. It is intended during the coming year to dispose of bonds guaranteed by the dominion and provincial governments, the proceeds of which will be used to reimburse the Grand Trunk Railway Company for the amounts advanced.

Grenfell Tangle Talk.

Little new information is available regarding the Grenfell tangle, but the next few weeks will likely disclose a financial network which will, to say the least, prove [illegible] interesting. Caustic comment still is heard in regard to this failure.—Fred. W. Field.

SOUTH VANCOUVER LOAN

*London, July 11.—The [illegible] County 4 per cent. loan of £40,000, which was offered at 99½ last week, was fully subscribed. The South Vancouver loan, however, went to the extent of 62 per cent. to the underwriters.

FRENCH LOAN WAS SUCCESSFUL

*London, July 8.—The huge success of the French government 32 millions sterling [illegible] per cent. loan and the Indian government's three millions sterling 4 per cent. railway issue are especially cheering. The French Treasury received applications for forty times the amount needed.

The famous woolen stocking of the French people once more showed inexhaustible resources, and small tradesmen, clerks and servants waited patiently from six o'clock in the morning outside the Ministry of Finance, Bank of France, Hotel de Ville and other centres, where 16s. paid over the counter gave the subscriber the right to purchase two shares.

CALGARY OIL AND MISREPRESENTATION

*London, July 8.—Discussing what it calls "Canadian Oil Dangers," the Daily Chronicle, warningly records the frauds reported from Calgary, and says an expert on the spot informed them that the amount of misrepresentation is appalling.

In one instance, borings were made a few hundred yards apart. At a given time the public were invited to inspect the gusher. In due course the gusher produced what was called the purest gasoline, which, in fact, was pumped down one boring and forced up the other.

The expert adds that undoubtedly there is oil in paying quantities, but at the present time little or no systematic prospecting has been done. It is dangerous to purchase shares in the present undeveloped stage.

MAY ISSUE SHORT-TERM NOTES

†London, July [illegible].—[illegible], presiding at the Investment Corporation of Canada meeting, announced that the board was contemplating the advisability of borrowing on short-term debentures because they found it impossible, owing to the condition of the market and the demand by the investing public for a higher rate of interest for all securities, especially Canadian, to issue any debenture stock at a price except one that would be damaging to the credit of the company. The company's manager in Canada reported that generally speaking confidence [illegible] been [illegible] throughout the whole [illegible] and [illegible] conditions were [illegible]."

CREATER WINNIPEG LOAN ISSUE

†London, July [illegible].—The [illegible] today of [illegible] of the Greater Winnipeg Water District [illegible] redeemable [illegible] 1924. [illegible] sufficient to redeem [illegible]. [illegible] Proceeds of the issue will be applied to [illegible] of the work [illegible] Shoal Lake and to [illegible] expenditure [illegible].

[illegible] one-half per cent [illegible].

[illegible] for the official listing of the [illegible].

[illegible]

[illegible] Press cable.

MORE FOR THE UNDERWRITERS

†London, July 14.—The underwriters have been saddled with no less than 90 per cent. of the Oceanic Steam Navigation 4½ per cent. debentures, which are now quoted at two discount.

ONLY FAIR RECEPTION TO LOAN

†London, July 14. The issue of £400,000 Greater Winnipeg Water 4½ per cents. at 95 has not met with a particularly good reception. The result is in no way surprising, because of the profound reluctance of dealers and general investors to take any new stocks just now, when both Ireland and Mexico are troubling the political waters so much.

MONTREAL'S PROGRESS

*London, July 13.—John Findlay, of John Findlay, Limited, who is now in London, says:

"I hear people here talking as if things were in a very bad way in Canada, which is ridiculous. Whatever troubles there have been were caused by speculators, and English investors. Canada is judged too much by what is happening in the West, where the depression is undoubtedly felt, and prices have fallen. There has been no check to the steady progress in Montreal.

WESTERN CANADA LAND COMPANY

†London, July 11.—A circular has been issued by the Western Canada Land Company proposing that a shareholders' committee shall be appointed on Tuesday to be composed of E. H. Cuthbertson, Otto Krishaber, A. C. Miles, and Robertson Lawson. The committee already elected has made a preliminary investigation and has come to the conclusion that it would be wise to formally appoint an advisory committee with the usual powers and, inter alia, with the object of sending one or more members to Canada with a view to forming an independent judgment on the spot as to the value of the company's assets. It is proposed the committee shall then go carefully into the whole position and evolve a scheme of finance.

The shareholders, having regard to the fact that the value of the company's assets cannot yet be definitely ascertained, will probably decide at the forthcoming meeting to confine their attention to the appointment of a committee as proposed.

MAY SEE INSIDE OF PRISON

†London, July 14.—"I hope somebody will see the inside of a prison over this," declared an indignant shareholder at the Western Canada Land meeting to-day. The remark was received with signs of satisfaction by several other members. The meeting had been called with a view to appointing an advisory committee and sending a representative to Canada to form an independent judgment on the spot concerning the value of the company's assets. The chief matter with which the shareholders reproached the directors was the lending of £54,000 to the Canadian Agencies when they surely must have known that Grenfell was indulging in highly speculative business, declared several.

Herbert Smith, legal adviser to the company, pointed out that long before the deposit was made the Canadian Agency was the company's fiscal agent. It might not be a wise practice for a parent company to have money dealings with subsidiary companies, but it was so common as to be almost universal. Canadian Agency was in a very high position when the deposit was made.

Chairman Tennant said the directors, of course, had not the least idea that Grenfell was entering into highly speculative business.

A shareholder: "Do you reckon the deposit a total loss?"

Chairman: "We cannot put any value upon it at all [illegible]."

The advisory committee was appointed.

†Canadian Associated Press Cable.

GRENFELL STATEMENT SHOWS HEAVY LOSS

*London, July 15.—At the meeting of creditors of Chaplin, Milne and Grenfell to-day the official receiver gave a statement of affairs as submitted by the managing directors. This showed a deficiency as regards the creditors of £29,900. The official receiver warned the creditors that, in his opinion, the assets would not likely realize anything like the values placed upon them by the directors, and it was not probable, he thought, that any surplus would be available for the shareholders.

CANADIAN INDUSTRIAL SITUATION

*London, July 15.—Reassuring crop statements are published from Sir Thomas Shaughnessy and Sir Frederick Williams-Taylor, but the market is still over-shadowed by more or less vague rumors of Canadian industrial uneasiness. The response to capital issues remains generally poor. The underwriters are left with 60 per cent. of the Buenos Ayres Pacific million sterling fives, while the fact that practically the whole of the £400,000 Greater Winnipeg Water Board issue and the greater part of the White Star issue are also unsubscribed suggests that the supply of money is not so plentiful and cheap as it was expected to become this month.

BRITISH TRADE IN CANADA

†London, July 10. Mr. C. Hamilton Wickes, British trade commissioner to Canada, resident in Montreal, reports thus on trade between the United Kingdom and Canada:

"The position held by the United Kingdom is on the whole encouraging. I am confident that it will improve as conditions relating to distribution in Canada becomes better understood by the manufacturer."

Commenting upon the natural advantages enjoyed by the United States in trade with Canada, it is pointed out in the report that they comprise easy and rapid access to the market and the fact that freight rates have not been increased from the chief centres of supply to the points of delivery in Canada for several years, while sea freights have been considerably increased. The United States currency is also the same as the Canadian. These and similar advantages, it is added, give the United States an extraordinary advantage over European competitors. The result is reflected in the figures given as to the trade between the two countries.

◆

NEW STOCK ISSUE FOR CANADIAN PACIFIC RAILWAY

Sir Thomas Shaughnessy, president of the Canadian Pacific Railway Company, to-day issued the following statement:—

After the payment of all fixed charges and dividends, the company entered upon the new fiscal year, July 1st, with thirty-six million dollars in cash, and fourteen million dollars in equipment securities, after having spent upwards of thirty million dollars on railway and steamship construction, for which four per cent. consolidated debenture stock had been authorized, but not offered on the market.

"The end has nearly been reached with all the important works of construction and improvements that were in progress, and only a comparatively small portion of the money in hand will be required for their completion. No new works of any magnitude are contemplated at present, and therefore, no necessity exists for a further issue of capital stock. It is not unlikely, however, that the directors will, at the meeting in October, recommend to the shareholders that the authorized ordinary share capital be made to conform to the amount for which the company has legal warrent, so as to provide for the company's future capital requirements as and when they arise.

OIL FUEL VERSUS COAL

Canada Occupies Eighth Place in World's Production—

The world's production of crude petroleum in 1912 amounted to about 52,921,750 tons; the sources, respective quantities and percentages were as follows:

Country.	1912 Tons (2,00 lbs.)	Percentage of total production.
United States	32,897,000	62.16
Russia	10,174,500	19.23
Mexico	2,910,000	5.50
Roumania	1,987,500	3.76
Dutch East Indies	1,672,000	3.16
Galicia	1,298,620	2.45
India	1,101,450	2.08
Canada	38,750	0.073
Other countries . . .	841,250	1.59

If the whole of this crude petroleum were employed as fuel in steam raising it would not replace, allowing for its higher thermal efficiency, much more than 5½ per cent. of the world's output of coal, whilst if used in internal combustion engines it would be equivalent, as a source of power, to about 16 per cent. of the coal.

Supply for Twenty Years.

Only a small proportion, however, of the crude petroleum can be regarded as available for use as a source of power, for by far the larger part is in demand as an illuminating agent and as a lubricant for machinery.

As the United States produces over 62 per cent. of the world's production of petroleum, it is interesting to note that Dr. Day, of the United States geological survey, considers that, a the present rate of increase of the output of petroleum, the known oil fields of the United States will, on the basis of the minimum quantity of oil obtainable, be exhausted by the year 1935, while, even if only the present output were maintained, the supply would, on the same basis, not last more than 19 years.

Will not Supplant Coal.

In many countries there are, no doubt, vast tracts of undeveloped petroliferous territory, but only drilling can determine this. Even if the available deposits were far larger than there is reason to believe them to be, the cost of doubling the present output would be great. In view of these circumstances, it is not probable that there can be any general substitution of petroleum for coal as a source of power, although there is undoubtedly opportunity for making provision for a larger use of liquid fuel for certain purposes in which its advantages are conspicuous.

LONDON MANAGER OF BANK OF COMMERCE

Like many men who have risen to high position in the commercial world, Mr. H. V. F. Jones, manager of the London branch of the Bank of Commerce, began his business career comparatively early, states the London Financial Times in an article dealing with Mr. Jones' career, for it was on 11th December, in this instance not an ill-omened number, in the year of Queen Victoria's Jubilee, 1887, that at the age of sixteen he entered the service of the Canadian Bank of Commerce. In the hard school of practical experience he soon fitted himself for advancement, and after a sojourn at the head office in Toronto he was given control of the bank's business in New York. No finer training-ground could have been chosen than the financial centre of the States, owing to the large business interests between America and the Old Country. Leaving New York for London, he is now head of the most important branch of the bank's business at No. 2 Lombard Street, immediately opposite the Bank of England, in what may truthfully be termed the banking centre of the world. His business activities are confined to the interests of the Canadian Bank of Commerce in England, which provide ample scope for every energy.

◆

DIRECTORS WHO DO NOT DIRECT

Here is an extract from the report of the Interstate Commerce Commission to the United States Senate regarding the financial operations of the New Haven railroad:—

"If these directors," it says, "who were faithless to their stewardship were held responsible in the courts and at the bar of public opinion for their failure to do those things they should have done, the lesson to directors who do not direct would be very salutary. Most of the directors of the New Haven accepted their responsibility lightly. They failed to realize that their names gave confidence to the public and that their connection with the corporation led the public to invest. When these directors were negligent and serious losses resulted therefrom, they were guilty of a grave dereliction of duty and a breach of trust that was morally wrong and criminal in its fruits.

"Directors should be made individually liable to civil and criminal laws for the manner in which they discharge their trust. A corporation can be no better or worse than those who operate it. It should be just as grave a crime to plunder stockholders or the public through a railroad corporation as it is personally to rob an individual."

RECENT FIRES

Monetary Times' Weekly Register of Fire Losses and Insurance

Kintore, Ont.—July 10—Cheese fatory. Loss slight. Cause, sparks.

Yarrow, B.C.—June 4—Moir shingle mill. Loss, $6,000. Cause unknown.

Whitby, Ont.—July 12—Mr. D. Maclaren's barns. Loss and cause unknown.

Delaware, Ont.—July 13—Mr. J. Jones' barn. Loss unknown. Cause lightning.

Stouffville, Ont.—July 11—Mr. W. H. Shaw's store. Loss and cause unknown.

Deseronto, Ont.—July 14—Mr. E. Levesque's store. Loss, $1,600. Cause unknown.

Sperling, B.C.—July 8—Salmon River Company's lumber mill. Loss, $40,000. Cause unknown.

Preston, Ont.—July 12—Mr. J. Slee's barn, near Doon. Loss, $30,000. Cause, heating of hay.

Dalhousie, N.B.—July 7—Dalhousie Lumber Company's mill. Loss, $25,000. Cause unknown.

Port Dover, Ont.—July 11—Port Dover Brick and Tile Works. Loss, $20,000. Cause, supposed incendiary.

Quebec, Que.—July 9—Dufferin Terrace. Loss unknown. Cause, supposed dropped cigar or cigarette end.

Chilliwack, B.C.—July 7—Denmark and Burton Hardware Company's warehouse, a laundry and stables. Loss, $12,000. Cause unknown.

Stevensville, Ont.—July 10—Mr. A. Otterman's poolroom, United Brethren Church, Mrs. D. Campbell's residence. Loss, $6,500. Cause unknown.

Montreal, Que.—July 9—Messrs. M. D. Carroll, Robert Warren, Robert Herron, and Donald Logan, summer residences at Hudson. Loss, $6,000. Cause unknown.

July 11—Shamrock Athletic Association grandstand. Loss, $10,000.

July 13—Canadian Pacific Railway storehouse, Glen yards. Loss and cause unknown.

Toronto, Ont.—The report of Fire Chief Thompson for week ended July 7th shows the following losses:—

July 2—Vacant residence, 682 Richmond Street West, owned by Benj. Siegle. Cause unknown. Loss, $500.

July 3—Mrs. L. Murrell's residence, 29 Homewood Avenue; owned by Chas. Schmuck. Cause, lamp exploded. Loss, contents, $350; building, $25. International Stock Food Company's building, 92 Adelaide Street East, owned by Toronto General Trusts Company. Cause unknown. Loss, contents, $100; building, $25.

July 4—George Pointon's residence, 204 Dovercourt Road, owned by D. M. Woods. Cause unknown. Loss, contents, $50; building, $75.

July 6—Wm. Noble's building, 2202 Dundas Street. Cause, overheated stove. Loss, contents, $50; building, $25.

July 7—Gasoline launch, J. M. Oxley (Port Credit). Cause, ignition of gasoline. Loss, $1,000.

◆

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

The following fires were adjusted by the E. A. Lilly Adjustment Agency, Edmonton:—

Edmonton, Alta.—July 1—Howlett, Bell and Evans, automobile destroyed. Insurance, $1,400, North America.

South Fort George, B.C.—Palace Boarding House. Loss about $[illegible]. Insurance, Imperial Underwriters, $5,000.

Islay, Alta.—June 30—J. T. Fyfe, skating rink building, totally destroyed. Insured, $2,400, Liverpool and London and Globe.

Coronation, Alta.—June 25—H. [illegible] J. Watchorn. Dry [illegible] apartments. Total loss on building and [illegible] $[illegible]. Insurance, Hartford, $500; Caledonian, $[illegible] [illegible], $1,300; Sun, $500; Royal, $2,-[illegible] $5[illegible].

Edmonton, Alta.—[illegible] Candy Manufacturing [illegible] stock and fixtures, $2,350. In[illegible] $[illegible]; Dominion Fire, $2[illegible] other insurance, $5,-5[illegible] [illegible] building occupied as candy factory by above, Edmonton. Loss, $600; insurance, $7,500.

Manville, Alta.—June 30—J. B. Burch, general store. Loss on stock, $18,200; insurance, $13,000. Loss on buildings, $3,000; insurance, $1,750. D. McArthur, pool room. Loss on building, $650; insurance, Liverpool and London and Globe, $1,500. S. K. Smith, curling rink building. Loss, $1,200; insurance, Great North, $600. D. B. McLean, implement warehouse. Loss on stock, $3,300; insurance, Liverpool and London and Globe, $1,500. Loss on building, $1,500; insurance, $1,000. Dr. Bruce, business block. Loss, $260; insurance, Hudson Bay, $2,500.

Victoria, B.C.—Fire Chief Davis reports the following loss by fire on buildings and contents, and insurance on same for June:—

Loss by fire on buildings	$1,205.00
Loss by fire on contents	639.50
Total loss by fire on buildings and contents	$1,844.50
Insurance on buildings	$4,800.00
Insurance on contents	1,400.00
Total insurance on buildings and contents	$6,200.00

There were 4 box alarms, and 14 telephone alarms.

Saskatchewan.—During June, July and August, 1913, 61 fires caused by lightning were reported to Saskatchewan fire commissioner, involving a property loss of $30,043. Of these losses 52, or approximately 85 per cent. occurred in rural districts. Barns and dwellings suffered most, the number of such buildings struck being 44, or 72 per cent. of the total. Whilst it is not claimed that the losses reported represent anything like all the losses from this cause in the province they are sufficiently indicative of the lightning danger and should furnish a stimulus to more adequate protection. Several losses from this cause have been reported already during the summer of 1914. The attention of the public is therefore drawn to the advisability of protection, especially in the cases of country buildings, isolated buildings and buildings of an elevated description.

Vancouver, B.C.—The Vancouver fire department responded to 59 alarms during June, as follows, according to Mr. N. Lee's report: Second alarms, 2; false alarms, 4; chimney fires, 6; fires where no damage resulted, 12; smoke scares, 3, and fires where damage occurred, 32. The total loss for the month was $52,487 with insurance paid of $42,377, leaving the property loss above insurance $10,110. The total value of property involved was $1,387,198. A list of alarms where the damage exceeded $50 follows.

June 3—Telephone alarm at 12.45 a.m. to Robertson and Hackett's saw mill plant, Granville Street and False Creek. Fire in frame shed at the east end of plant near the refuse burner and conveyer caused by sparks from burner. Shed and contents destroyed. Plant owned and operated by Robertson and Hackett. Damage, $1,522, covered by insurance.

June 4—Alarm from Box 215 at 4.07 p.m. Fire on roof of frame cottage at 173 Dufferin Street caused by sparks from chimney. Building owned by Ota and occupied by Japanese. Roof destroyed and also slight damage to contents. Damage $150. Telephone alarm at 7.20 p.m. Fire on roof of Maple Leaf restaurant at 111 Hastings Street East, caused by sparks from chimney. Building owned by A. A. DesBrisay, and occupied as a restaurant with rooms above. Fire confined to roof. Damage $350, covered by insurance.

June 5—Verbal alarm at 10.29 a.m. Fire on roof and gable of the Salvation Army Barracks, Gore Avenue and Hastings Street, caused by sparks from chimney. Building owned and occupied by the Salvation Army. Damage $88, covered by insurance. Telephone alarm at 8.06 p.m. Fire in two two-story frame buildings at 1266-1276 Granville Street, owned by H. Hoffmeister, and occupied by P. A. MacEachern, carpenter shop; C. Bestlands and W. W. Howe, furniture and auction rooms; Roote automobile top company; W. R. Corey, auto repair shop. The blaze apparently started in the basement in carpenter shop from some cause unknown, and owing to the very inflammable nature of the building and contents quickly spread, considerable damage resulting before being extinguished. A second alarm was turned in for this fire. Damage $11,714, partly covered by insurance.

June 8—Alarm from Box 67 at 4.30 a.m. Fire in wharf and pile of coal at 1029 Main Street, owned by D. McArthur and occupied by the Main Supply Company. The blaze was evidently caused by spontaneous combustion, and a quantity of the coal had to be washed into False Creek to enable the department to get at the seat of the fire. Damage about $1,650, covered by insurance.

June 10—Alarm from Box 35 at 10.05 p.m. Fire in compensator in sub-station at Prior and Main Street, caused by electric current. Building owned and occupied by British Columbia Electric Railway Company, Limited. Damage $150.

June 13—Alarm from Box 412 at 3.27 p.m. Fire in vacant dwelling at 1788 First Avenue West, owned by E. N. Peck. Furniture had been stored in a lean-to at rear and boys had set packing on fire, considerable damage resulting to the building before being extinguished. Damage $700, partly covered by insurance. Alarm from Box 28 at 6.12 p.m. Fire in roof and attic of building at 132½ Pender Street East, caused by a defective chimney. Building owned by Mee Wo and occupied by Huie Quong and used as a jewellery store and restaurant. Damage $50, covered by insurance.

June 16—Verbal alarm at 6.15 p.m., to 814 Granville Street; fire on roof caused by sparks from chimney. Building owned and occupied by Mr. Allan and used as a cafe and rooming house. Damage $88, covered by insurance.

June 17—Telephone alarm at 6.29 a.m., to 642 Hastings Street East, owned by A. Z. Anderson, and occupied by E. S. Waterman as a dwelling. Fire on roof caused by sparks from chimney. Damage $610, partly covered by insurance. Telephone alarm at 12.49 p.m., to 2556 McKenzie Street, owned and occupied by Mrs. C. S. Town. Fire in upstairs and roof caused by children with fire crackers setting fire to cot on sleeping porch in rear. Damage $375, partly covered by insurance.

June 18—Alarm from Box 1329 at 6.24 p.m. Fire at the Fairview Manufacturing Company sash and door factory at 2054 Sixth Avenue West, owned and occupied by Baldwin and Sutherland. The blaze started from some unknown cause and had a good hold on the 1½-story frame building and contents when the apparatus arrived, both building and contents being practically a total loss. The heat was so intense that two dwellings across the street were set on fire, one being badly damaged. 2055 Sixth West was owned and occupied by Chas. Railton and 2059 Sixth West was owned and occupied by F. Radelett. A second alarm was turned in for this fire. Damage about $21,380, partly covered by insurance.

June 19—Telephone alarm at 7 a.m., to 510-512 Richards Street, a two-story frame building, owned by W. H. Gallagher and Company, and occupied by A. J. Cassels, window blinds, R. D. Brewis, Brilliant Sign Company, and Mrs. Sutherland, cafe and rooms. The fire was on the roof and was caused by sparks setting moss ablaze, the contents of the building being damaged by water. Damage $582, partly covered by insurance.

June 21—Verbal alarm at 10.43 a.m., to 234 Hastings Street East, owned by Mrs. Rowbottom and occupied by Paul Letvinoff, tailor shop, and A. H. McLean, living rooms on second floor. The blaze had started in work-room of tailor shop and was caused by an electric iron being left turned on, and was working its way up walls at rear to floor above. Damage considerable; not yet adjusted.

June 23—Telephone alarm at 1.44 a.m. Fire in two-story frame dwelling at the north-east corner of Thurlow and Hastings Street, owned by Janet M. Hutchison, trustees, and occupied by Mrs. Thorne. Cause of fire unknown, no one being in the house when it started, and had a good hold when the department arrived; considerable damage resulting to both building and contents. Damage about $4,010, covered by insurance.

June 25—Telephone alarm at 8.15 a.m., to 1641 Fourth Avenue West, a two-story frame building owned by E. N. Gilliatt, and occupied by the Permanent Dye Works, and apartments on the second floor. A gasoline explosion had occurred which blew out one side of the basement wall and enveloped the rear of the place in flames. Considerable damage was done to both building and contents before the fire was extinguished. Damage about $1,4[illegible], partly covered by insurance.

June 26—Telephone alarm at [illegible] to 81[illegible] [illegible] Street East, owned by Hans Nelson, [illegible] and used as a dwelling and store [illegible]. Fire had started in an upstairs [illegible] unknown cause, considerable damage [illegible]. Blaze confined to room where it originated. [illegible] $1.575, covered by insurance.

MOOSE JAW'S SOUND POSITION

Financial Statement Shows Excellent State of Affairs

The city of Moose Jaw has issued its financial statement [illegible]. It shows a strong position with assets of $[illegible] and liabilities of $[illegible], the former exceeding the latter therefore by $[illegible]. Credit is due to the municipal authorities and to the chartered accountants, Messrs. [illegible] Grieg and Company for the clear and concise way in which the accounts of the city are presented. Such business-like methods cannot do otherwise than enhance the credit of the municipality, whose bonds are held in Canada, the United States and Great Britain, and generally in high esteem by investors and institutions.

Made Good Progress.

Moose Jaw has made excellent progress during recent years, and during the recent sifting process which separated municipal imagination from fact, this city has stood firmly upon its solid foundation of agriculture, trade and business. Moose Jaw has always done more work that counts for all time in city building than horn blowing that impresses only for the moment. The result has been satisfactory to the people of Moose Jaw and of Canada generally.

The city offers exceptional opportunities for the investment of capital in legitimate enterprises in many lines, but particularly, we believe, in wholesaling, distributing and industrial works. Some of the city's needs are:—Wholesale hardware houses, wholesale boot and shoe stores and clothing houses, wholesale harness and harness factory, furniture factory, wholesale paint and glass house, biscuit factory and distributing house, linseed mill, gasoline engine works, planing mills, flour mills, oat meal and prepared food mills and binder twine factory.

Is Railroad Centre.

The city is on the main line of the Canadian Pacific Railway, 400 miles west of Winnipeg and 440 miles east of Calgary. It is in the heart of a rich agricultural area. Moose Jaw is one of the most prominent railway cities in Saskatchewan. It is the meeting point of the main line of the Canadian Pacific Railway and the Soo line, the greatest system under the Canadian Pacific Railway control. Here the Canadian Pacific Railway, with its thousands of miles of railway and the allied Soo system with its thousands of miles, touch rails to form the great transcontinental [illegible] of the Soo Pacific system. The Grand Trunk Pacific is building to Moose Jaw from Regina. The Canadian Northern Railway also reaches the city. A branch line of the Canadian Pacific Railway runs north to Outlook—the beginning of an [illegible] trail which will yet be extended to Edmonton and onward to the Pacific—and the Great Northern Railway plans to come in from the south. Moose Jaw is the keystone of the railway situation of Saskatchewan, [illegible] the richest province of the Dominion.

Will Become Manufacturing Centre.

Mr. R[illegible], a well-known Moose Jaw citizen, [illegible] Moose Jaw must become a great manufacturing [illegible] raw materials [illegible] Manufacturers [illegible]

[illegible]

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Port Arthur, Ont.—By-laws totalling $65,000 will be voted on August 6.

St. Vital, Man.—The by-law authorizing the municipality of St. Vital to sell debentures to the value of $140,000 for seven miles of concrete roads has been carried.

Welland County, Ont.—Tenders will be received up to July 30th for $150,000 5 per cent. 30-years debentures. R. Cooper, clerk. (Official advertisement appears on another page.)

Belleville, Ont.—The estimates for the year show proposed expenditures amounting to $202,000, this passed at a recent council meeting; also a by-law to borrow money to meet current expenses.

Saskatoon Public School District.—The auditor's report of the Saskatoon public school district shows assets amounting to $2,088,325 and liabilities of $1,465,424. The receipts for 1913 were $781,268 and disbursements $757,805.

Fort William, Ont.—"The Fort William taxes, collected half yearly, have been paid up this year most satisfactorily," is the expressed opinion of the chairman and members of the finance committee of the city council. Up to July 7th, $400,000 has been taken in, as compared with $350,000 for the same period of last year.

Montreal, Que.—The Montreal board of control has accepted the offer of the Bank of Montreal for a temporary loan of £250,000 at 3¼ per cent., the lowest rate ever offered the city. The commission is [illegible] of 1 per cent. The loan will be floated in London. The city has power to float a loan of $7,000,000, but there is no immediate need of it.

Medicine Hat, Alta.—The city council has fixed a tax rate for 1914 for all purposes at 17½ mills, which, allowing for the 10 per cent. discount for prompt payment, makes a net rate of 15¾ mills. The general rate is the same as last year, namely, 10 mills, while the school rate is higher, owing to large capital investment to provide for the increasing school population, being 7½ mills. The total rate is slightly higher than that for 1913. This year's assessed valuation, on the single tax basis, is about the same as last year, being a little over $20,000,000.

Regina, Sask.—The revised estimates for local improvement expenditures at Regina during the present year call for an aggregate expenditure of $2,337,165. Some of the larger items are: Pavements, $140,606; sewage disposal works and sewer connections, $71,606; domestic sewers, $74,000; storm sewers, $82,614; waterworks, $250,000; water mains, $76,512; power plant and electric light distribution, $[illegible]80,000; general hospital, $111,084; north west fire hall, $20,000; plank sidewalks, $18,570; completion of Broad Street subway, $18,000; parks, $21,400; Collegiate Institute, $[illegible]6,000; street railway, $51,26[illegible]; Hamilton Street bridge, $35,000. It is likely the city will make arrangements for the issue of $[illegible] worth of treasury notes within the immediate future.

Alberta.—The following school districts have been authorized to borrow money: Bow Island, No. 1884, $[illegible]. W. A. Bauman, Bow Island; Wood Glen, No. 2068, $1,200. Herbert Greenfield, Westlock; Redcliff, No. 2283, $25,000. W. H. Riddell, Redcliff; Bollard, No. 2474, $400. Walter Barber, Medicine Hat; Berenice, No. 2535, $800. G. W. Gorman, Medicine Hat; Greenridge, No. 2546, $1,200. H. A. Purdy, Scollard; Sparta, No. 2740, $400. F. McDowell, Carrot Creek; Suffield, No. 2757, $1,000. H. A. Whiffin, Suffield; Bison, No. 2824, $1,000. M. L. Chapman, Chinook; McMurray, No. [illegible], $800. H. Forman, Fort McMurray; Catchem, No. 2011, $1,500. John C. Hansom, Catchem; Three Hills Village, No. 2048, $2,500. C. P. McDonough, Three Hills; Lovelist, No. 2666, $1,500. Lester Ecker, [illegible]; Independent, No. 3181, $1,500. N. C. Tregloan, [illegible].

Hamilton, Ont.—The city treasurer has issued the financial [illegible] for the first six months of the current year, [illegible] appropriation and the amount of money [illegible] for the various departments for the [illegible] administration of criminal justice, [illegible] $15,000, $156,[illegible]02; board of works—street lighting, $57,480, $23,841; board of health, $14,370, $6,169; board of health—quarantine, $531; city hall, $10,400, $7,469; charity, $24,860, $18,492; fire department, $104,370, $47,689; hospital, $158,880, $77,065; house of refuge, $18,860, $11,094; harbor, $5,000, $5,000; garbage expenditure, $32,750, $14,032; jail, $9,500, $4,635; markets, $7,760, $3,088; miscellaneous, $28,950, $9,481; police department, $124,870, $59,162; printing and advertising, $5,100, $5,768; general salaries, $73,950, $39,428; general sewer construction, $18,900, $4,048; sewage disposal, $29,410, $10,825; waterworks construction debentures, $125,000, $130,858; waterworks expense, $88,820, $36,048; weigh scales, $5,200, $2,615; damage claims, $4,000, $361; Birch Avenue extension debentures, $32,566, $18,730; central fire station debentures, $40,757, $12,560; east end fire station debentures, $5,885, $5,631; hospital repair debentures, $125,000, $25,291; license general, $600, $435; Mountain Face Park debentures, $12,620, $15,187; old library, $800, $855; publicity, $2,200, $560; sick children's hospital debentures, $25,254, $10,077; waterworks Imp B.L., 1231, $61,658; west end sewer and disposal, $13,410; relief unemployed, $10,000, $1,259.

Regina, Sask.—The following is a list of debenture applications granted by the Saskatchewan local government board and the applying treasurers:—

School Districts.—Avonhurst S.D., No. 327, $1,500. D. Schick, Avonhurst; Harmonia, No. 2905, $600. N. G. Fast, Blaine Lake; Netherby, No. 2372, $500. Jos. Harrison, Candiac; West Luseland, No. 3296, $1,200. J. Huff, Luseland; Huntingford, No. 1412, $350. Wm. Ney, Baring; Cululi, No. 3215, $2,000. G. H. Day, Prelate; Wilson Lake, No. 3305, $1,800. W. E. Adkin, Wilson Lake; Sherman, No. 3270, $2,000. Mrs. Ernest Estey, Admiral; Coriander, No. 3192, $2,000. F. D. Walker, Coriander; Bresaylor, No. 111, $1,200. C. F. Stephens, Bresaylor; Nauka, No. 3059, $1,500. V. H. Hyrvank, Hafford; Portreeve, No. 3028, $6,050. Emil Erickson, Portreeve; Elsas, No. 1094, $7,000. Adam Huck, Vibank; Erinvale, No. 3271, $1,800. C. J. Henry, Trewdale; Danny Brook, No. 3003, $2,000. Wm. T. Hall, Ormiston.

Rural Municipalities.—Star City, No. 428, $1,500. Robt. Jones, Star City.

Rural Telephone Companies.—Kandahar, $6,000. H. E. Tollman, Kandahar; Neidpath, $3,500. J. E. Donnelly, Herbert; Third Meridian, $5,200. E. N. Keeney, Davidson; Rhein, $4,000. Dr. Jas. Bruce, Rhein; Keelerville, $8,800. H. O. Tobiason, Keeler.

Villages.—Sturgis, $900. F. M. Weikle, Sturgis.

The Saskatchewan local government board received applications from 1 city to borrow $196,229.65; 3 towns, $26,500; 3 villages, $13,700; 2 rural municipalities, $8,000; 6 rural telephones, $31,000; 17 school districts, $44,150.

The application of one village to borrow $2,500 and one rural municipality to borrow $4,000 was refused, and the city's application is pending investigation.

THE MONETARY TIMES IN BRITISH COLUMBIA.

The sole business agents of *The Monetary Times* in British Columbia, the Vancouver Organizers, Limited, 403-4 Bank of Ottawa Building, Vancouver, B.C., have issued the following intimation of their appointment:—

"We have pleasure in advising you that we have just been appointed sole agents in the province of British Columbia for *The Monetary Times*, of Toronto, and in that capacity we beg to place our services at your disposal. You are probably well acquainted with the high standing and influence of this old established journal, and should you at any time have anything to communicate either concerning matters of public interest which you think might be appropriately dealt with by *The Monetary Times*, or regarding your own business which might be legitimately published in that journal, we shall be very pleased to hear from you and to give our best attention to your communication.

"For advertising purposes *The Monetary Times* is availed of by all the Canadian banks and by insurance companies, financial houses, real estate firms, manufacturers and merchants throughout the whole Dominion."

Mr. R. B. Bennett, Vancouver, is *The Monetary Times* editorial representative in British Columbia.

ONTARIO AND THE UNITED STATES

The commercial and economic conditions in Ontario are dealt with in a special report to the United States government, by Mr. Julius D. Dreher, the United States consul in Toronto. It is one of the most complete of its kind ever issued, and treats the financial, commercial, agricultural, industrial and mineral development and position of the province, in a thorough way. Especially interesting are compilations regarding the principal industries, capital and production of Canada and Ontario's percentage share. These show that the old province is in a remarkably strong position. Another table gives the exports to the United States, invoiced from the various consulates and consular agencies in the province. There is also a compilation showing the declared exports from Ontario to the United States by articles. The total in 1913 was $71,874,442 compared with $[illegible] in 1912. All these valuable statistics are compiled and printed for the first time.

The report, which covers thirty pages, is very comprehensive and will prove of immense value to the numerous business men in the United States interested in Canada. Mr. Dreher has wasted neither time nor ink upon generalities, for his report contains only facts and figures, all up-to-date and useful. They reflect an immense amount of painstaking labor and research. The particular work of the United States consul in Toronto has placed him still higher in the estimation of business men of that city—in which he resides and has already held an unusually high place there.

◆

The end of the depression is in sight, but not to the naked eye yet.

About the only thing Mr. [illegible], Montreal's mayor, has not tried to do is [illegible] the depression.

INVESTMENTS AND CRIME

The British commonly judge the degree of civilization in any country chiefly by the respect accorded to life and property. Where there is such respect, investments are usually safe. Thus, capital invested in Canada is obviously not liable to menace, such as is the case, for instance, in Mexico. The criminal statistics of Canada throw interesting light on this phase of investment. During 1912, the latest year for which figures are available, there were 20,[illegible] charges and 15,5[illegible]7 convictions for indictable offences. There were approximately 208 convictions for every 100,000 inhabitants. This properly may be considered an excellent record, especially as much of our population is drawn from countries, some of which have peculiar notions regarding law and order.

Of the total number of persons convicted, 4,144 were sentenced to jail with the option of a fine, 4,729 to jail for less than one year; 738 to jail for one year and less than two; 931 were sent to penitentiary for two years and less than five; 308 to penitentiary for five years and over; 9 to penitentiary for life; 25 were sentenced to death; 433 were sent to reformatories, and 4,200 were allowed to go with sentences such as "bound to keep the peace," or "sentence suspended," etc. Ninety-two out of every hundred persons convicted during the year were sentenced for the first time, four for the second time, and four were recidivists or habitual criminals.

Analyzing the occupations of the offenders per hundred by classes, the following results are obtained: Agricultural, [illegible]; commercial, 10; domestic, 8; industrial, 12; laborers, 54, and professional, less than 1. The figures given for "laborers" are out of proportion when compared with those of the other classes of occupations; it is evident that a number returned as "general laborers" should have been included with the more defined classes, such as agricultural, commercial, domestic or industrial, to which they properly belong. The commercial class seems to have an unusually high percentage.

One naturally seeks knowledge as to the age, education, habits, residence and birthplace of offenders. From the blue book it is learned that the civil condition of offenders per hundred is [illegible] for single, 28 for married and 2 for widowed. The figures relating to education show that [illegible] in every 100 were unable to read or write, [illegible] had an elementary education and [illegible] a superior education. As to age, [illegible] per cent were under 16 years, [illegible] per cent from 16 to 21 years, [illegible] per cent from 21 to [illegible] years and [illegible] per cent were [illegible] years and over.

ONTARIO AND UNITED STATES

Consular Report Shows That the Province is Big Factor in Trade and Industry

A comprehensive report of the commercial and economic conditions in Ontario has been made to the United States government by Consul Dreher, of Toronto. The following table in the report shows the declared exports from Ontario to the United States, by articles, has been compiled from the declared export returns of the consulates and consular agencies for the calender years 1912 and 1913:—

Articles.	1912.	1913.
Abrasive, crude, artificial	$ 86,016	$ 82,422
Agricultural implements	3,162	11,168
Animals, live:		
Cattle and calves	559,2[illegible]5	4,899,771
Dogs	400	....
Foxes	....	3,000
Horses	182,723	121,478
Sheep and lambs	37,667	20,308
For breeding purposes	12,445	20,275

Export Trade to United States.

The admission of cattle and fresh meats into the United States free of customs duties under the tariff law of 1913, explains the large increase in the declared exports of cattle and meat to the States, says Mr. Dreher, that increase being chiefly in the last three months of the year. A large crop of oats and a short crop of hay in 1913 account for the great increase in the exports of oats and oat hulls and the large decrease in the shipments of hay during the year. The increased exports of hides and skins may be explained in part by the dullness of the leather trade in Ontario caused by business depression last year, in consequence of which it was more profitable to export the hides and skins than to tan them. The more favorable customs duties on news-print paper entering the United States increased the exportation of that article across the border.

The large increase in the export of lime nitrogen shows that the cyanamid factory at Niagara Falls for the extraction of nitrogen from the air for use in manufacturing fertilizers has passed the experimental stage and taken its place among successful industries.

Principal Industries, Capital and Production.

The following table, compiled for this report from census statistics, shows the amount of capital invested and the value of the products of the principal industries in the Dominion of Canada and in the Province of Ontario in the census [illegible], with Ontario's percentage thereof:—

Industries.	Capital invested. Canada.	Capital invested. Ontario.	Ontario's percentage.

Tobacco, cigars, etc	25,329,323	5,974,367	23.6
Wood pulp	9,117,465	4,487,827	49.2
Woolen goods ..	5,758,733	4,017,316	70.0

As the total capitalization of Canada's manufacturing industries increased at the annual average rate of 17 per cent. and the product rate of 14 per cent. from 1900 to 1910, inclusive, it may be assumed that during the years 1911, 1912, and 1913, the capitalization and production of the foregoing important industries made large gains.

Canadian Industries Located in Ontario.

From the foregoing table it appears that Ontario has more than 50 per cent. of the capitalization of 23 and more than 50 per cent. of the value of the products of 22 of the 38 important industries listed in the table. It will be seen also that Ontario had a monopoly of automobile manufacturing in Canada in the census year, though it should be added that a manufactory of automobiles went into operation at St. John's, Quebec, in 1913. Ontario had practically a monopoly in the manufacture of agricultural implements, with 97.8 per cent. of the capital and 93.1 per cent. of the value of the product of that industry. The works of this industry in Toronto and Hamilton are said to be the largest of the kind in the British Empire. In the manufacture of musical instruments and in fruit and vegetable canning Ontario's share is more than 90 per cent. The latter industry is carried on chiefly and generally throughout the southern part of the province, Hamilton holding the leading place in this business.

The electrical supply works at Hamilton and Peterborough are the largest of the kind in Canada, and the carriage works at Brockville and Oshawa and wagon works at Woodstock are said to be the largest of the kind in the British Empire.

The report also reprints several tables compiled by *The Monetary Times.*

CANADIAN NORTHERN FINANCING

An offering of guaranteed debenture stock of the Canadian Northern Railway will be made in London shortly. The National Trust Company, Toronto, will carry out the provisions of the trust deed in connection with the government guarantee. The Canadian Northern Railway has arranged its temporary financing.

◆

FORT WILLIAM AND PORT ARTHUR

An excellent depiction of the developments which are taking place at the head of the Great Lakes has recently been issued by the General Realty Corporation, Limited, of Port Arthur. Various articles deal with Manufacturing at Canada's Great Lake Ports, Iron Ore Resources, Grain Trade, Shipping and Shipping Facilities, The Twin Ports, Agriculture, Lumber Industry and Water Power Available. Many interesting comparative diagrams, statistical records and photographs complete a brochure of unusual merit.

Messrs. Smith, Mackenzie and Hall, 54 Adelaide Street East, Toronto, have been appointed general agents for the province of Ontario, for the [illegible] Casualty Company. Mr. J. Wm. Mackenzie's connection with the company terminated on July 1st. Mr. Mackenzie takes with him the company's [illegible] regard [illegible] wishes for his future success, [illegible] appreciation [illegible] the good service he has rendered during the past [illegible]. Mr. [illegible], who has been [illegible] during the past four years, has [illegible] the company's home office [illegible] Wellington Street East [illegible] with the company's general [illegible] to have [illegible] under liability [illegible]

ETHICS OF REAL ESTATE

New York Board's Proposals—Signs Commissions and Agencies

A special committee of the New York real estate board appointed to draft a code of ethics to govern the conduct of brokers has made a report to the board of governors embodying the following rules:—

"A member shall not in any way improperly interfere with any specific transaction of another member.

"A member shall not solicit owners of property with a view of obtaining business that is known to be under the management or in the sole control of some other member, and no proposal of such business shall be accepted unless it comes from the owner without solicitation, or unless information is refused by the broker in control.

"When a member accepts from another member a customer for a property the first transaction closed shall relieve each member from further obligation to the other in connection with subsequent business done with such customer, unless by prior written agreement to the contrary.

Opinion to be Unprejudiced.

"A member shall give an unprejudiced opinion, if he gives any, concerning another member's proposition when asked to do so by a prospective customer.

'A member shall refuse to put a 'For Sale' or 'For Rent' sign on property on which there are already two signs, because in the opinion of this board many signs on a property do more harm than good.

"No member shall offer property or submit any application for a loan without the knowledge and consent of the owner, or his authorized agent, and then only on such terms as authorized.

"No member shall furnish information concerning a property to other members either in respect to its sale, lease or mortgage, claiming sole agency, unless he shall have been retained in such capacity. No member shall offer any property so furnished him upon any other terms than precisely those stated by the members sending out the information, and all negotiations shall be carried on through such member.

No Side Commission.

"No member shall under any conditions claim or receive any commission or rebate upon repairs made or supplies purchased in the operation and management of properties in his charge, without the consent of the owner.

"In all cases where an operator, owner or other person shall act in bad faith toward a member, and the member claims that he has been unjustly deprived of a commission, the facts may be reported to the board of governors and the governors may, after consideration of the claim, request the operator or owner or other person to arbitrate the claim of the member, and shall preserve records of all requests to arbitrate and answers thereto, which shall at all times be open for the inspection of the members of this board."

OXFORD WORSTED LINEN MILLS REORGANIZED

At a meeting of the shareholders of the Oxford Worsted Linen Mills, Limited, in Dorchester, the agreement made with the directors in connection with the sale of the company's assets to the Sterling Securities, Limited, was confirmed.

The old company had been doing business in a restricted way owing to the inadequacy of working capital. There has been demand for their product of towels, lap-robes, hammocks, etc., but their resources were such that they were unable to keep their plant in operation sufficient to cope with their orders.

A new company is being formed called the Eastern Linen Mills, Limited, which will be supplied with capital to handle the business offered, and it is intended to increase the efficiency of the plant and through an organized sales force to extend the sales of the company's product throughout the Dominion.

It is not intended to issue any of the securities at the present time, and it is not likely that any of the shares will be offered the general public for subscription.

BRITISH COLUMBIA'S PRODUCTION

Agriculture Represented $24,000,000 Last Year—Import Statistics

Last year, in order to get exact information [illegible] of comparison for future years, regarding the agricultural production of British Columbia, Hon. Price Ellison, provincial minister of finance and agriculture, sent out [illegible] competent men who visited every producing district, obtaining the returns direct and in person, and who also interviewed all the leading importers. The figures for 1912 were also revised as closely as possible. The total production in British Columbia, under the six different heads shown, for 1913, was $23,974,529, or practically $24,000,000, an increase of over $1,700,000 as compared with 1912. The agricultural and animal products of British Columbia, as shown in the census returns of 1901, amounted to $6,600,000, so that British Columbia now produces nearly four times as much as it did twelve years ago. It is true that the figures show that the province imports about $20,000,000 worth of agricultural produce, or a considerable increase from year to year, but we must bear in mind that the population has increased by [illegible],000, or in other words trebled, since 1901. It is true that dairy products, and hay and grain show a decrease, but every other item of production shows a substantial increase.

Live stock, poultry and eggs, fruits and vegetables, and meats are rapidly increasing. The report of inspection of nursery stock shows that over 5,000 cases of bulbs, about 148,000 fruit trees, 1,600 nut and fig trees, nearly 900,000 seedlings and grafts, over 360,000 small fruit bushes and about 422,000 of miscellaneous, were inspected. These figures from year to year prove that there must be a great increase of orchard area all the time.

Near the towns the speculation in real estate has deterred production, the land either having been divided up into lots or become too high to be profitable for farming. There is a greatly aroused interest in farming generally. Not only are the farmers themselves taking a new and keen interest in their problems, but the people as a whole are turning their attention to the land as a solution of the high price of living. There is a strong spirit in favor of co-operation in the farming community, and for the first time in this province there are good grounds for the hope that the farmers themselves will take hold of the matter of marketing their own produce on a business, co-operative basis.

The value of live stock in the province at the end of 1913 was $17,859,056.

LONDON GETS THE FACTS

Reply of The Monetary Times to Pessimistic Critics Overseas—Basic Conditions Sound

[illegible] Canada [illegible] our London contemporary, The [illegible] Times, print the following [illegible] The Monetary Times, who is visiting London:—

"Basic conditions in Canada are absolutely sound. While it is true that the English investor has sustained losses in connection with certain Canadian securities, the [illegible] of the several failures has been really in London. Such were the case [illegible] most recent failure. Canadians recognize that they have made some mistakes, and at present the country is [illegible] a strenuous period of economy and readjustment. The chartered banks have the situation well in hand and there is not the least cause for alarm.

"Canada's towns and cities have been heavy borrowers here and must also raise further large sums during the next few years, but they know, I think, the opinion of this market, and they are eliminating all extravagancies. More production in every direction is being encouraged, and that really is a most important factor. We have reached the end of an extraordinarily active period of construction. Back to the land and to the mine is the slogan, and during the next ten years there should be a very large increase in crops of all kinds, in mineral output, lumber and so on.

"Canada's adverse trade balance seems to be a pet subject of criticism here. It is gratifying to know that the balance improved in favor of Canada during the past fiscal year by many millions of dollars. It is unreasonable to expect an old country's balance sheet to exist in a new country in the making. Turning prairie land into cities, agricultural lands into crops and housing several hundred thousand newcomers every year is not a small task and obviously costs money.

"Canadians will always accept, I feel sure, the justly formed opinions of the London market regarding the Dominion. Canada, however, need not be made the scapegoat in a dull market here. However, the country has very broad shoulders to bear even that unpleasant ordeal."

Commenting on this interview, another prominent London contemporary, [illegible], says: "These are sentiments which [illegible] endorsed by all unbiased publicists in the Mother Country, and prove uniformly acceptable in the Dominion itself."

IMPERIAL BANK OF CANADA

DIVIDEND No. 96.

Notice is hereby given that a Dividend at the rate of Twelve Per Cent. (12%) per annum upon the paid-up Capital Stock of this institution has been declared for the three months ending 31st July, 1914, and that the same will be payable at the Head Office and Branches on and after Saturday, the 1st day of August next. The Transfer Books will be closed from the 17th to the 31st July, 1914, both days inclusive.

By order of the Board.

D. R. WILKIE,
General Manager.

Toronto, 24th June, 1914.

WESTERN FREIGHT RATES

VII.

Should Rates Be Raised?

It must also be borne in mind that the construction of these very lines, among others, was advanced by Mr. Cowan as the reason why the Canadian Northern returns were not satisfactory, Mr. Cowan arguing that the construction of a large part, of the system had been at such a rapid rate as to prevent a proper return being made. It may appear that as the larger part, if not all, of the railway's recent construction, both in Saskatchewan and Alberta, has been made at the direct request and under the provincial government guarantees that it is somewhat difficult to reconcile counsel's attitude with the policy of the provincial governments and to give effect to a demand which would penalize the company for having made the construction urgently required by the provincial authorities. Beyond all question lines built under government guarantee or assistance, and so far as the Canadian Northern is concerned it would be difficult to find any that do not answer this description, must be considered as lines built into proper districts and directions, although it may well be that it is impossible, owing to their recent construction, to predicate any rate on their earnings.

There being no doubt as to the necessity of railway construction, suggested Mr. H. L. Drayton, the next question for consideration is whether or not the board of railway commissioners should assist by authorizing rates at a higher rate over the railway system as a whole than would otherwise be reasonable, at least in so far as the older portions of the railway, which are producing good returns to the carrier, are concerned.

While it may be that, in the interests of the province as a whole, this would be an excellent way of obtaining necessary railway extensions, I am of the opinion that it is not a matter that the board can take into direct consideration in rate-making. It would place a direct and discriminating burden in the guise of a transportation rate on certain sections of the community. The principle is strenuously objected to by counsel for the complainants, and I would give effect to their contention. The practice would be discriminatory also in that shippers in the east would not contribute through any of their freight payments, and as already pointed out, the eastern manufacturer and shipper to the west is interested in western railway development, and will continue to be, certainly, so long as the commerce of the country moves as it now does in channels east and west.

It is also true that railway extension is of immediate interest to the distributing centres of the west wherever they are situate, as they are vitally affected by every addition to consuming areas created by railway extension in any portion of the country in which they distribute. On the other hand, the consumer, who in the long run pays every rate, and who consists in a large proportion in the west of farmers who already have reasonable facilities, is not at all concerned in affording other farmers in the unsettled districts facilities such as he himself enjoys. It would appear much more equitable, therefore, to charge a higher rate on new lines, if necessary, in order to secure railway construction, than to charge an otherwise unduly high rate on lines on which business has been built up.

It seems to me that extensions out into new territory should be made at the risk of the company, rather than at the expense of shippers on the old lines.

I do not propose, therefore, to give any effect to the question of extensions when considering the rates [illegible]. Indirectly, of course, consideration is in a way [illegible] given to the necessity of enabling railways to attract additional capital. Extensions of service, betterments [illegible] and the enlargement of terminals have [illegible] to be made often in the old settled districts [illegible] and apart from any question of fairness [illegible] selves; but as a matter of public policy [illegible] be rates of such a character as [illegible] render railway securities marketable.

Mr. Pitblado, in the course of his [illegible] that there were too many railways [illegible] for the reason, in part, that some [illegible] ing rather to transcontinental lines [illegible]

ran their transcontinental lines close to each other, so that there were places where the Grand Trunk Pacific and the Canadian Pacific practically ran along the same dump, while notwithstanding in the same territory he observed grain drawn 20 miles to market, and that such a state of affairs was deplorable when there was so much territory that wanted development in the west.

In order to ascertain to what extent overlapping, complained of by Mr. Pitblado, had obtained in the past, and the necessity of regulation in the future, an examination of railway construction in the west shows the position in the prairie provinces to be as follows:—

So far as Manitoba is concerned, that portion of it lying south of the 19th Township, Lake Manitoba, and the 14th Township as far east as Selkirk, is well supplied with railways. Of course, in all instances, not only so far as Manitoba is concerned, but Saskatchewan and other parts of the country, some overlapping would be found to be necessary by reason of the necessity of lines making grade, and owing to rivers and other physical conditions of the country, as well as what would occur to me to some extent at least as a proper railway policy the necessity of obtaining access to large receiving and distributing centres. The board has not before it sufficient details to ascertain just what percentage of overlapping might be justified in view of these conditions. Subject, however, to these considerations 2,000 miles of railway would be sufficient to place the track within 10 miles of every farm; while, as a matter of fact, 2,850 miles of track had been constructed, or somewhat over 40 per cent. more mileage than the territory required on this basis.

To the east the Grand Trunk Pacific is constructed so as to run pretty well through the same territory as the Canadian Pacific. At the boundary the lines are six miles apart. They cross each other near Rennie and divert from there until they are ten miles apart at Molson, and then converge at Winnipeg. The whole distance from the boundary to Winnipeg is about 95 miles.

In Saskatchewan there is not so much overlapping of territory as in south-western Manitoba, but the south-eastern portion of the province is pretty well covered.

The constructed lines and the lines under construction amount to 5,861 miles, and of this about 1,433 miles are within 20 miles of lines already constructed; or about 24 per cent.

In order to more readily ascertain the effect of railway construction a more just appreciation of the situation can be formed by dividing the province into blocks.

In British Columbia overlapping has not taken place, at any rate to any appreciable extent, on branch or local lines. The Canadian Northern and Grand Trunk Pacific, however, run largely side by side through the Rockies, while the Canadian Northern's right-of-way closely follows the Canadian Pacific through the Valley of the South Thompson.

This state of affairs is not, however, peculiar to the west. The paralleling of railways resulting from the construction of the Toronto-Montreal line of the Canadian Northern and the new Canadian Pacific line between the same points, occupying, as they do, territory already served by the Grand Trunk, affords a striking example of the practice in the east, as well as railway construction in certain sections along the north shore of Lake Superior.

For the reasons already pointed out the board does not pass any opinion as to how much of the duplication shown was or was not necessary. The criticism of Mr. Pitblado is, however, at least in part well founded and the necessity for some business control by the government, which will prevent the unnecessary duplication of facilities in the future, as urged by Mr. Bicknell, established.

◆

The Prudential Trust Company, acting on behalf of clients, have purchased the steamship Storstad, the steamer which was in collision with the Empress of Ireland.

An offering of the unsold balance of $500,000 7 per cent. cumulative preferred stock of the Metal Shingle and Siding Company, Limited, of Canada, is being made by Messrs. Turner, Tucker Company, of Boston. The company has factories at Preston, Toronto and Montreal, with branches at Winnipeg, Saskatoon, Edmonton, Calgary, and manufactures of metal products, principally for building purposes, such as metal trim, doors, windows, shingles, sidings, skylight

It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

PROPER UNDERSTANDING OF FIRE INSURANCE

Why Companies Are Organized—Policies Should Contain Proper Description—Obligations of Insured

"Fire insurance companies are organized with the intent to endeavor to make profits, after paying commissions to agents, salaries, rents, taxes, licenses, [illegible] outlays, and they are as much entitled to reasonable profits, as reward for their labors, enterprises, and the risks they assume, as you are," remarked Mr. Henry Lye, the well-known fire adjuster, in an address some time ago to the Canadian Credit Men's Trust Association at Vancouver.

If the premiums received from the public do not furnish sufficient funds to cover all these outlays the insurance company either goes insolvent or withdraws from the field: no other course is open to them, no other course is attempted by them, consequently, we read, from time to time, of insurance companies who, to use a local expression, have "gone broke."

There is only one terror for a well conducted fire insurance company,—that is a general conflagration in which it may be exterminated; many of the old companies have gone through such ordeals at the expense of all their capital and assets and have found it necessary for them to re-organize with new subscriptions of share capital.

It is a fact that such conflagrations occur with unaccountable frequency, and generally arise from some trivial cause which was deemed an impossibility—as the poet says: "Grave results from trivial causes flow."

If the insurance companies can escape conflagrations, they are really benefited by the frequency of fires, because numerous fires stimulate the demand for insurance policies, and so produce income to the companies and their agents; whilst, if fires are few and far between, the people become indifferent as to insurance, and both companies and agents suffer from inadequate income, whilst their fixed charges and ordinary expenses continue.

Again, the fire insurance companies are not organized as benevolent institutions: if they pay more than they ought to do, they do so at your expense, as their premium rates are intended to be based upon the risks they assume, and these premiums must be paid by you.

Nor are the insurance companies organized for the detection and punishment of criminals who may commit arson or fraud.

What Fire Insurance Is.

Many merchants do not carry sufficient fire insurance; some deem themselves secure from fire because they are personally careful; some because they are simply careless, and others, because of its cost.

Fire insurance is a sort of co-operative institution for the protection of careful people from the effects of unforeseen and unavoidable losses by fire,—it is limited in two ways: to the amounts of the policies, and to indemnity to extent of the loss.

Not even the most careful person may with impunity attempt to carry on business without this protection.

The persons who don't care whether they have any or adequate insurance, are apt to be careless in business matters generally, and are not desirable persons to whom to extend credits or insurance.

Those who forego adequate fire insurance on account of its cost, have a genuine grievance, because this excessive cost arises from the carelessness or criminality of the persons on whose premises fires originate, over whom they have no control.

There are numerous other grievances in connection with fire insurance which are within your power to remedy, and which should have your careful attention.

Many persons, voluntarily, or by persuasion, make application for fire insurance without any knowledge of its requirements, and so, when a fire occurs, are apt to be disgusted or disappointed.

Policy Should Be Suited.

So a merchant should not only [illegible] proper [illegible] fire insurance, but should have [illegible] tion to the several properties [illegible]

building, on fixtures, on furniture, and on such other combustible properties as he may possess.

He should be sure that the wordings properly describe the properties the policies are intended to cover. If he is insured on the same items in different companies, he should be sure that the wordings are identical and that none of them overlap, or include in one sum, items which are severally covered in any other policies.

He should carefully read not only the wordings of descriptions of the risks covered, but also the conditions printed upon the policies, remembering that the statutory conditions are the law of the land, and not merely the dicta of the insurance companies, so must be properly respected by him.

Some ignorant persons have the idea that fire insurance is like a load of manure and so may be applied after a fire where it may do the most good, instead of being strictly confined to the items described in the policies and to the amounts stated in connection with each of such items.

Some other people imagine that a fire insurance policy is like a bag of potatoes, and may pass from hand to hand without any legal process. The distinctly stated purpose is that of indemnifying the person to whom it is originally issued and none other, except by formal transfer ratified by the consent of the companies issuing them, which consent cannot be given by one who is not fully authorized to do so.

Some of those who are insured may be paying excessive amounts of premium upon items for which in case of fire they could not claim corresponding indemnity, while other items have been altogether neglected or inadequately covered; these are dangers from which your care and forethought may protect your customers.

Difficult to Make Inventory.

Others have the idea that if they buy goods and get insurance policies they have no responsibilities in connection with their creditors or their insurances.

When a fire occurs it is found that they have no means of demonstrating the amounts or particulars of their losses, because they have had no safe in which to keep their books of accounts, or their invoices, or their inventories.

If they have been persuaded to buy a safe they stick in it all sorts of useless papers, but their invoices are stuck on a file, their books of accounts are merely records of the goods sold on credit, and are defective even in that respect.

If they take stock once or twice in a few years they do not so describe their goods as to be capable of identification with their original invoices, but put together in one sum, say 100 suits, miscellaneous, $1,500, without any further description; several of these suits may have been sold during the time of the stock-taking without any correction being made. Many of them do not know the proper process of taking stock or how to properly extend the items, or to correctly add the columns, so when they are done their labors have been in vain, because the result is without reliability or value.

Then when they are done stock-taking they do not compile thorough statements of their assets and liabilities, so do not know how they stand with the world, or whether they have made losses or profits, or on what goods, or why.

Then again, when they think they have ascertained the amount of their stock and other assets, they take no care of their stock sheets, but throw them into some drawer or on a shelf, or in a desk, so when a fire occurs they are destroyed along with the goods.

I saw an entry in a ledger of the amount of an inventory, stated to be of the merchandise contained in a store, which I could not believe to be reasonably correct. After thorough investigation I found that it included shares in different mining companies, a shed, a horse and wagon, and several other properties which were not "merchandise contained in the store" as described in the policies. Many items were speculative and of uncertain value, if any; yet this inventory had been returned to the mercantile agencies as of "merchandise on hand:" it was not surprising that a fire should occur, or that the man should now be out of business and taking contracts in his wife's name.

I have seldom seen an altogether correct inventory; "onlys, dozens, gross, great gross," are impartially treated; hardware extended at list prices, and so on; columns are incorrectly footed. I have known an error of $1,000, in carrying over from the foot of one page to the top of another, result in a wedding.

BONDS FOR $100

Many people of small means are possibly not aware of the opportunity for safe investment offered by our $100 Bonds. The small investor has looked upon owning Bonds as rather beyond him—thinking of Bonds as being only in denominations of $1,000, or some other equally impossible sum.

But $100 will buy one of our Bonds, giving the holder of it precisely the same security as those of the largest denominations. They are a security in which Executors and Trustees are by law authorized to invest

THE EMPIRE LOAN COMPANY

WINNIPEG, CANADA

CLAY RESOURCES BEING DEVELOPED

Products Are Varied and Valuable—Production of Various Provinces

The production of c[illegible] p[illegible] [illegible] C[illegible] [illegible] creasing very rapidly during the past f[illegible] [illegible] [illegible] new plants have been erected both [illegible] [illegible] parts of the Dominion. For the year 1912 about 459 [illegible] firms reported to the department of mines, [illegible] [illegible] firms active in 1911, and 4[illegible] firms in 1910. The average number of men employed in 1912 was 1[illegible],415 as compared with 9,131 in 1911 and 8,[illegible]5[illegible] in 1910. The total wages paid in 1912 were $4,488,957, as against $[illegible].524,[illegible]58 in 1911.

For a number of years a small quantity of fireclay has been produced and sold and in 1912 there was a small production of kaolin or china-clay from a deposit in the province of Quebec. With these exceptions, practically all of the clay production in Canada is manufactured by the producer, and this report, therefore treats almost altogether of the manufactured product.

The clay products made in Canada comprise brick of various kinds, including common and pressed, ornamental and fancy building brick, paving brick, firebrick, porous fireproofing brick and blocks, sewerpipe and drain tile, pottery and sanitary ware, the last two products chiefly from imported clays.

The total value of the production of clay products in 1912 was $10,575,869, as compared with a value of $[illegible],350,9[illegible] in 1911, showing an increase of $2,215,936 or over 26.5 per cent.

Ontario Produces Most.

Of the several provinces Ontario is by far the largest producer of clay products, being credited in 1912 with 46 per cent. of the total value of the output, as compared with 47 per cent. in 1911. Quebec contributed 16 per cent., Alberta about 12.5 per cent., and Manitoba 10 per cent. of the total output in both years, and British Columbia [illegible] per cent. in 1911, and 9.4 per cent. in 1912.

Of the total value of the production in 1912, building and paving brick, including fireproofing, contributed $9,1[illegible]3,666, or about 86⅔ per cent.; sewerpipe and tile production were valued at $1,242,503, or 11.7 per cent. of the total. The total value of the production of pottery was $426,580, of which $43,955 is estimated as attributable to Canadian clays, the balance to imported clays; the value of the production of fireclay and firebrick was $125,585. Compared with the previous year, the production of building, paving and fireproofing brick, shows an increase of about 3[illegible] per cent., while the aggregate production of sewerpipe and drain tile shows a slight falling off, states Mr. J. McLeish in his report.

The average price of common and building brick for the whole of Canada in 1912 is reported as $9.11, as compared with $8.37 in 1911; $8.13 in 1910; and $[illegible].81 in 1909. The average price of pressed or front brick for the same years was respectively $12.86, $12.53, $11.8[illegible], and $1[illegible], thus showing a general increase in cost of building brick.

Importing Much Fire Brick.

The total value of the imports in 1912, was $6,5[illegible] (not including certain items probably in part covering [illegible] products), and after deducting a small export a total approximate consumption of clay products valued at $1[illegible] [illegible] shown of which about 62 per cent. was of domestic production.

In 1911, the approxim[illegible] [illegible] [illegible] $13,516,477, of which about [illegible] [illegible] production. In 1909 the approximate [illegible] valued at $9,972,995, of which about [illegible] mestic production.

While the imports of building br[illegible] [illegible] the total value is still small [illegible] duction. In the case of paving [illegible] are about double, and of fire[illegible] Canadian output. The import[illegible] creased much more rapid[illegible] past year.

The only export of cl[illegible] building brick, of which th[illegible] valued at $8,493, and ma[illegible]

In 1911 the exports were: Building brick, 394,000, valued at $3,997, and manufactures of clay valued at $2,071.

The imports of clay products and of clay reached a total value during the calendar year 1912 of $6,592,540, equivalent to about 62 per cent. of the domestic production. The total imports in 1911 were valued at $5,156,544, showing an increase in 1912 of $1,435,996, or nearly 28 per cent., as against an increase in 1911 over 1910 of 19 per cent. In both years the imports have increased at a higher rate than the domestic production.

Clay imports are classified by the department of customs under three main subdivisions, including:—Brick and tile, earthenware and chinaware, and clays. The imports of clays in 1912 were valued at $288,394 and included chiefly china-clay and fireclay, with a small quantity of pipeclay and other clays not classified. The value of china-clay imports was $127,402 and of fireclay $140,500. In 1911 the total value of the imports of clays was $270,247, and included china-clay valued at $125,768 and fireclay valued at $125,199. The imports of these clays have varied considerably from year to year, and do not show the same general increase as do the imports of manufactured clays.

Foreign Brick and Tile.

The imports classified under brick and tile were valued in 1912 at $3,209,190, of which about 28 per cent. was fire-brick, other important items being building brick, sewer-pipe and paving brick. There was also an importation under this class of manufactures of clay not specially designated, valued at $818,467. The value of the imports of brick and tile in 1911 was $2,369,761, of which about 34 per cent. was firebrick. The imports during 1911 of manufactures of clay not specially designated, were valued at $523,998.

The imports of these unclassified brick and tile have increased steadily year by year, the value of such imports in 1905 having been only $20,804. The increase in the imports of brick and tile in 1912, as compared with 1911, was a little over 35 per cent. The imports of earthenware and chinaware, of which the most important class is table-ware, were valued in 1912 at $3,094,056, as against $2,516,536 in 1911, or an increase of about 23 per cent.

There is also a considerable annual importation of chalk, china or Cornwall stone, cliff stone and feldspar, fluorspar, magnesite ground or unground, much of which is no doubt used in connection with the manufacture of clay products. The value of these imports during the calendar year 1912 was $167,000, of which $131,604 was from the United States, $34,732 from Great Britain, and $1,564 from other countries. The value of the imports under this item during the calendar year 1911 was $147,640. There is also an annual importation of baths, bath tubs, basins, closets, lavatories, urinals, sinks and laundry tubs of any material, the value of such imports during 1912 being $382,020, as compared with $285,847 during the year 1911.

◆

CANADIAN BANKS AND UNITED STATES COMPETITION.

Monetary Times Office,
Montreal, July 15th.

Mr. E. L. Pease, vice-president and general manager of the Royal Bank of Canada, being asked if he expected any considerable competition from American banks now that they are permitted under the new Currency Act to establish branches abroad, replied:—

"No, I cannot say that there is any immediate prospects of our having to meet competition of American banks, either in Canada, the West Indies, or elsewhere. American banks cannot do more than establish agencies in Canada, similar to those we have located in New York and elsewhere in the United States. Such agencies are greatly restricted as to the business they can undertake. In New York, for example, our agency is not operating under our name. The Royal Bank, as such, can neither accept its deposits nor issue its notes. I cannot see, therefore, any great reason why American banks will find the Canadian field attractive.

"As to competition abroad, we are so well established in the West Indies that we do not fear serious competition there."

THREE THOUSAND MILES OF POLES

They Were Used in Twelve Months—Prices Show Advance

The statistics for wooden poles purchased in Canada during 1911 were obtained by the department of the interior from reports from 282 companies. Of these [illegible] were [illegible] light and power concerns; 102 were telephone companies, [illegible] were electric roads; 19 were steam railways, and 4 were telegraph companies. The 102 telephone companies reporting included the three provincial telephone departments which buy poles in large quantities for the rural lines connecting with their systems. The 19 steam railway companies reporting included in their reports poles purchased for a large number of subsidiary companies. Taking this into consideration it is felt that the reports received represent at least 95 per cent. of the poles purchased by Canadian companies.

These companies' head offices were distributed among the different provinces as follows: Ontario, 165; Quebec, 33; Nova Scotia, 20; British Columbia, 16; Manitoba, 15; Saskatchewan, 14; Alberta, 9; New Brunswick, 9; and Prince Edward Island, 1.

These companies are divided into two main classes: (1) steam railways, telephone and telegraph; (2) electric railway, power and light. Most Canadian steam roads operate telephone and telegraph lines in connection with the railways, and most electric roads distribute power and light. On this account it was found impossible to separate the different concerns further.

Half a Million Poles.

The total number of poles purchased in Canada in 1911 was 585,703, being a decrease of 197,138 from the figures for 1910. In all the different classes of pole-users there was a decided decrease in the number of firms reporting purchases, as compared with 1910. It is probable that many of these firms were sufficiently stocked to meet their requirements for 1911. There was also a decrease in the construction of new pole lines.

The total value of the poles was $1,056,277, an increase over 1910 of $12,403, which is explained by the advance in the average price per pole from $1.33 to $1.80.

Cedar was still the most important pole wood, probably on account of its form, durability and comparative cheapness. A total of 535,588 poles was reported for the two kinds of cedar, comprising over ninety per cent. of all poles purchased. Of these 463,234 were Eastern cedar at $1.61, and 72,354 were Western red cedar at $2.99. On the whole there was a decrease of about 30 per cent. in the number of cedar poles purchased, and an increase in price of almost 36 per cent.

Larch poles are used extensively in the western provinces for rural telephone lines. Out of the 28,226 larch poles reported, 25,000 were used by the Alberta government. These poles were cut in Alberta. Larch is the only tree native to Alberta which can be used, untreated, for poles.

The use of spruce poles has increased steadily in the last three years, in 1909, 2,070 poles were used. In 1910, [illegible] and in 1911, 8,764. During that time the average price remained practically the same.

Electric Companies Purchase Best.

Chestnut poles were used only locally and in small quantities.

Altogether eleven different kinds of wood were reported as having been used for poles. Of these, six were reported and classed separately for the first time in 1911. These were western cedar, jack pine, hemlock, Norway or red pine, white pine, and hard or yellow pine.

Steam railways, telephone and telegraph companies purchased 521,572 poles in 1911, at [illegible]. This was a decrease in number of [illegible] per cent. from 1910, but this class still included about [illegible] per cent. of all poles used. These companies also purchased nearly [illegible] per cent. of all the cedar poles of both species, [illegible] 185, at a price of $1.47. They [illegible] ed for white pine, red pine, [illegible]

Electric railways, power [illegible] 64,131 poles in 1911, at an average [illegible] an increase of 69 per cent. over [illegible]

crease of 14 per cent. in price These companies purchased all the Douglas fir and yellow pine poles reported. The high average price paid by the electric companies was probably due to the fact that they purchased the largest and the best class of poles in comparatively small quantities and usually could not obtain their poles locally.

The high price paid for white pine, yellow pine and chestnut cannot be compared with the others as these poles were purchased in very small quantities for special uses. The activity of hydro-electric power companies in 1911 was largely responsible for the increase in this class.

◆

DOMESTIC CONSUMPTION OF FLOUR.

Monetary Times Office,
Montreal, July 15th.

Colonel F. S. Meighen, president of the Lake of the Woods Milling Company, states that the milling companies have been doing a satisfactory business this year, considering the generally unfavorable conditions prevailing in Canada. He admits, however, that earnings will not be up to last year. The fiscal year of the Lake of the Woods Milling Company ends on August 31st. Colonel Meighen states that the export flour business has been about normal, but that there has been a decline in the domestic sales of flour.

The Lake of the Woods Company has gone ahead operating its Medicine Hat plant. Instead of building a new plant at that point, the company decided to take over a smaller company which was operating successfully and to make alterations and additions. This work is being carried on, but it has not been necessary to curtail work in the existing plant.

As to the cause of the falling off in the domestic consumption of flour during the past year, Colonel Meighen could offer no satisfactory explanation. The view is that the falling off is more apparent than real. Merchants had large stocks on hand at the beginning of last year, and have not been inclined to order more flour until the old stock is pretty well reduced and throughout the year have been buying in very small quantities. Stocks of flour in retail establishments throughout the country are now very low and a return to normal times will doubtless bring about heavy buying.

◆

MARKETING 1913 GRAIN CROP

There was some apprehension that owing to the climatic condition of the previous harvest there would be a considerable amount of damaged grain to be handled during the summer months, and that a condition would arise similar to that experienced by the board the preceding year. Fortunately, these apprehensions proved to be unfounded, state the board of grain commissioners in their report.

The climatic conditions during the harvest time of 1913 were good, and the grain ripened early. This, of course, favored a rapid handling of the crop. In addition to this, everybody concerned in the handling of western grain was well prepared. The different railway companies had marshalled their cars, locomotives and staffs, with an adequacy suggestive of the most scientific of war offices. The terminal elevators were ready and had sufficient capacity. The government offices and staffs engaged in the handling of grain had been enlarged; and the various commercial agencies were all ready and eager.

The result was unprecedented in the handling of grain. During the months of September, October and November, 116,385 cars were handled in Winnipeg alone, an average of 53.7 cars per hour, seven days a week and twenty-four hours a day, for three months.

It is difficult to appreciate the magnitude of this work, and it is still more difficult to appreciate it when consideration is given to the fact that complaints about car shortage, car distribution and congestion were fewer this season than they ever were before. It is quite true that the rushing of this enormous quantity of grain into the market in such a short time was bound to have a depressing effect on the price. This is the other side of the picture. It was magnificent railroading, but it was bad grain trading.

City of London

4½% Debentures

Maturing 30 June, 1944. Interest 30 June and 30 Dec

Interest and Principal Payable at the City Treasurer's Office or any Branch of the Molsons Bank in Canada.

CANADIAN BANKS IN WEST INDIES

Trade Conditions on the Islands and in South America

Canada has considera[illegible] West Indies and South Americ[illegible] president of the Royal Bank, [illegible] teresting summary of condi[illegible] Royal Bank not long ago pur[illegible] British Guiana Bank. This ex[illegible] because of the existing and gr[illegible] Canada, but because of its great p[illegible] interior, extending to the borders [illegible] areas of fertile lands, and very [illegible] erals awaiting railway development, a project [illegible] ceiving much attention.

Sugar Crop in Cuba.

The sugar crop of 1912-13 in Cuba amounted to [illegible] tons, an increase over the previous year of 5[illegible] tons, and the largest in the history of the island. Unfortunately, prices ruled low, and the total value—namely, $11[illegible], was actually $8,000,000 less than the value of the 1911-12 crop. The coming crop is estimated at 2.5[illegible] tons, but prices are still low.

An off-setting favorable feature this year is a higher saccarine yield than was obtained last season. The mills are also being operated more economically through a reduction in wages, etc. The United States tariff revision becomes effective March 1st next, when higher prices [illegible] are expected.

Tobacco and Cattle.

The condition of the tobacco industry is favorable. Large new areas were planted during the past year, and the coming crop is expected to exceed the previous one.

The cattle business is in a prosperous condition, with high prices prevailing.

Cuba's exports last year amounted to $[illegible], and imports $132,000,000, leaving a balance of $[illegible] in her favor. General trade conditions may be considered satisfactory, with the exception of the low price of sugar. The vast resources of the island in comparison with its small population of about 2,000,000, ensure continued prosperity.

Encouraged by the success of the Royal Bank's branches in Cuba, they opened five new ones there last year, making a total of 23.

In Porto Rico.

Trade in the island of Porto Rico continues depressed, owing to the reduction of the duty on sugar into the United States. Only the best-equipped mills can manufacture sugar profitably under present tariff conditions, and it is feared the industry will decline. The island is handicapped by the fact that its soil for cane growing is inferior to that of Cuba.

Coffee culture is resuming its former importance. The value of last year's export reached $8,5[illegible]. Exports of tobacco amounted to $9,[illegible], of fruits, $[illegible]. Total exports were $40,000,000, and total imports $[illegible], leaving a balance of trade in favor of [illegible] $12,000,000.

Of the British West Indies.

A large increase in Canadian trade with [illegible] will inevitably follow the inauguration of the [illegible] vice which the Canadian government [illegible] the operation of the reciprocity agreement, which came into force on October 1st, 1913. Gr[illegible] are likely to accrue also to the West Indies through the opening of the Panama Canal, which will give acc[illegible] Pacific coast and in the Orient. [illegible] sale of 42,000 sacks of Cuban sugar [illegible] ment to Japan, via the Suez Canal.

Canadian banks have 40 br[illegible] West Indies.

HAMILTON'S FIRE LOSS

Seven Fires Responsible for Half of Waste—Matches and Carelessness Prominent

During the year 1913 the Hamilton fire department responded to 497 alarms. This exceeds the number that occurred in that city in any one year in the history of the department, being 75 more than in the year 1912. There were 273 day alarms and 224 night alarms; 18 were from street signal boxes, 393 telephone calls, 4 on Dominion Messenger and Signal Telephone, 3 on private alarm bells, and 79 stills.

Of the above number of calls for the services of the department, 186 were for fires of a more or less serious nature. The total loss by fire and water for the year was $112,116. The insurance on property damaged or destroyed, $2,283,621. Insurance over loss, $2,176,342. Loss not covered by insurance, $4,838.

Over one-half of the total loss for the year was due to seven fires, points out Fire Chief Ten Eyck in this detailed report, namely: The Ruby Cigar Company, cigar factory, etc., 92 King Street West, January 4th; J. J. Smith & Sons, planing mill, etc., Sherman Avenue North, February 13th; the Dominion Power and Transmission Company, freight sheds, etc., Main Street East, July 6th; Grant Forwarding Company, stables, Catharine Street North, August 4th; Canada Steel Company, steel mill, Sherman Avenue North, August 11th; Tudhope Motor Company Automobile Garage, 128 King Street West, August 16th; and the Metropolitan Furniture Company, furniture storehouse, rear of 92 King Street West, August 14th, involving a total loss of $68,518, leaving a loss of $43,597 for the remaining 179 fires, or an average of $243.56 for each fire.

Loss Month by Month.

Hamilton's monthly fire loss was:—

	Fires.	Loss.	Insurance.
January	9	$ 3,879.98	$ 26,750
February ...	22	12,603.65	144,181
March	11	4,045.70	53,300
April	16	1,436.00	268,400
May	20	2,209.10	95,425
June	14	4,166.75	115,050
July	16	26,661.80	562,425
August	19	36,829.00	146,750
September	17	6,824.40	478,050
October	8	1,615.70	99,500
November	18	3,227.12	155,500
December	16	8,616.98	138,290
Total	186	$112,116.18	$2,283,621

Twenty-three From Carelessness.

There were 153 fires where claims were made, and 33 where no claims were made. The number of fires in frame structures was 64, in stone structures 6, in brick structures 102, in roughcast structures 5, in corrugated iron structures 7.

There were 68 rubbish fires, and 21 chimney fires. The number of fires caused by children and matches was 45, by fireworks, etc., 3, by hot ashes 8, by electric current, defective wiring, etc., 59, by carelessness 23. False alarms numbered 14, and incendiary fires 9. The number of fires caused by sparks from locomotives was 32, by spontaneous combustion 15, from unknown causes 41, by cigar or cigarette stubs 9, match heads breaking off 7, from other causes 143.

◆

Alberta's oil companies, according to an Edmonton despatch, are now over four hundred, and the aggregate capitalization amounts to $400,000,000.

The Dominion Power and Transmission Company has sold an issue of $500,000 5 per cent. mortgage bonds of various maturities from 1915-32 inclusive, to Messrs. Perry, Coffin and Burr, and Messrs. N. W. Harris and Company.

Mr. Sydney W. Smith, formerly of Messrs. F. H. Deacon and Company, has been admitted to partnership in the firm of Messrs. Cassels, Son and Company, members of the Toronto Stock Exchange, succeeding Mr. R. S. Cassels, who has retired.

CHEMICAL UTILIZATION OF WOOD WASTE

Wastage Begins in Forest and Continues Until Consumer Receives Finished Product

The fact that tremendous quantities of wood are wasted in Canada is well known to everyone and has often been commented on by *The Monetary Times*. The waste begins in the forest and continues all through the various operations which the wood must undergo before it reaches the consumer in its finished form. Every time the wood is handled a greater or lesser amount of it is lost in some form of waste. Much of this waste is necessary at the present time, but on the other hand a great deal of the waste material can be put to use even now.

Moreover, as the timber supply becomes depleted and the incentive to save becomes proportionally greater, a great deal more of this waste will be utilized and will become an economic asset where now it is only a source of loss.

The first form of wood waste to be encountered in studying the question is that of the tops, branches and roots, which are discarded in the bush. As a rule in this country these are left to rot away where they fall, or else they are piled up and burnt to prevent further fire-risk, and to clear the ground for future growth.

The logs themselves are usually floated to the mills and there the bark is stripped off and burnt, making another source of waste. These logs are then sawed up and another portion (ten to twenty per cent.) goes to waste in sawdust, and still more wood goes into slabs and edgings, which are frequently burnt to dispose of them. Boards are cut to standard lengths and the odd ends are usually wasted. The defective pieces are frequently also burned.

Little Units But Large Bulk.

The shavings and odd pieces produced in planing mills generally go to waste and those made in actual construction work are practically always wasted. Most of these wastes are small in themselves and possibly many of them are too small even to be eliminated; but they are wastes nevertheless, and, as such, are responsible for some proportion of the high cost of living. It is only when they are taken in the aggregate that they assume proportions sufficiently great to make an impression on the ordinary layman. When, however, he is told that this waste amounts to $10 or $15 annually for every man, woman and child in the country, it begins to assume proportions such as may seem worthy of his notice.

How much of this waste it is possible to eliminate is, of course, unknown. A great deal of it is inevitable for the reason that the labor-cost of putting many of these products into forms commercially valuable is greater than the value of the products so produced. But some of these can be utilized profitably, and one of the objects of the opening up of the Forest Products Laboratories is to discover and spread the knowledge of methods for such utilization, states a recent bulletin from the forestry branch of the department of the interior, by W. B. Campbell, B.Sc.

Receives Attention of Chemists.

Much has been done by the lumbermen themselves through their various associations to make an asset of many forms of waste wood. This work has been mostly along the lines of using up the small pieces produced by the mills which can be used to advantage by other mills, which do not necessarily require that their saw material be in large-sized stock. Box factories, spool manufacturers, toy makers and factories making such articles as hammer handles, etc., are frequently able to use the odd pieces produced in the manufacture of larger articles.

But the vast quantities of shavings, sawdust and edgings mostly go to waste yet, and to th[illegible] of chemists all over the world, [illegible] seems to be the most promising [illegible] resultants are the paper and pulp [illegible] soft wood distillation, manufacture of [illegible] oxalic acid, and producer gas.

MONTREAL'S BOOT AND SHOE MANUFACTURERS.

Monetary Times Office,
Montreal, July 15th.

Messrs. Hanan and Sons, the large boot and shoe manufacturing firm in New York, may build a factory in Montreal before the end of the year. The company is said to be doing a $7,000,000 business annually in high grade shoes and the Canadian factory will be for the purpose of handling their export trade, as well as the Canadian trade itself, which has increased 10 per cent. in the past few months, while the western American trade has decreased 15 per cent.

An official of the Ames-Holden-McCready Company, being spoken to on the point, admitted that Hanan and Sons, if they opened here, would offer considerable opposition, although in a slightly different line perhaps. He had no doubt, however, that Ames-Holden would be able to hold its own. Mr. D. Lorne McGibbon took over the duties of managing director immediately following the annual meeting and was now installed at the head office and giving all his attention to improving the position of the company. Economies were being enforced and savings already effected were large while the results in connection with the industrial end promised well for the future.

◆

CANADA'S COTTON INDUSTRY.

Monetary Times Office,
Montreal, July 15th.

The sales of the Canadian Cotton Company for the first quarter ended June 30th, are stated to show a falling off of about 10 per cent., as compared with last year. All through the winter the company's plants were working to capacity, but in May it was decided to make a slight reduction in the number of working hours. Every year a large number of men and women forsake the cotton mills in order to get outdoor work. The plants will probably be working on reduced hours until September or October.

The encouraging feature of the situation is that repeat orders since June 1st have been showing an increase week by week, as compared with last year. The travellers go out again on their regular spring trips about August 1st.

Similar reports are heard concerning the Dominion Textile Company, where the plant is said to be operating about 80 per cent. of capacity as compared with around 50 per cent. some time ago. Evidently dealers throughout the country have allowed stocks to work as low as possible and are now compelled to order. Whether this means a permanent improvement in the industrial situation throughout the country or not remains to be seen.

◆

IDEAL ECONOMICS IN A NUTSHELL.

The power that creates and increases the wealth of a people is labor from the purely manual labor of the wage-earner to the purely intellectual labor of the scholar, says Dr. Karl Helfferich, director of the Deutsche Bank, in the foreword to "Germany's Economic Progress and National Wealth, 1888-1913."

The vehicle of labor is man, or—as regards the whole State—the population.

The result of labor is the production of goods.

The productivity of labor is intensified by perfecting technical equipment and organization.

For the people as a whole the increased efficiency of labor finds expression in the statistics of production, trade and transportation.

The final purpose of economic labor is consumption.

The surplus of goods produced over and above the necessary expenses of production constitutes the income of the people.

The surplus of the income of the people over their consumption constitutes the increment of the public well-being.

The ideal economic development is that a growing population be able to increase the net efficiency of its labor, and thereby its income, to such a degree that, at the same time, a higher standard of life—in other words, a more plentiful satisfaction of material and intellectual wants—and an enhancement of the public wealth be attained.

Slate	[illegible]
Tile, dray and sewer pipe, pottery, etc.	[illegible]
Total	$12,918,109

Superintendent Surveys Conditions.

Mr. T. Denis, superintendent of mines, reports that there has been a marked improvement in the asbestos market, although the conditions are not yet ideal. The working margin of profits in the asbestos industry is narrow.

The report continues: "Except for the appreciable increase in the shipments of copper and sulphur ore, there are no new developments in the industry. The value of the copper and sulphur contents of these ores amounted to $[illegible] in 1913. This is an increase of $[illegible] as compared with 1912.

"The iron ore and iron smelting industry has been dormant in the province for over two years. We have no production recorded since 1911, and the prospect for a [illegible] tion of activity is not of the brightest.

"The titaniferous iron ore reported comes from Sturbarg and from Ivry. It is used as an ore of titanium, of which element it contains from 18 to [illegible]o per cent.

"The figures of gold and silver represent the [illegible] of these metals in the copper and sulphur ores of the Eastern Townships. The Beauce placers were not operated [illegible] 1913.

"The results in the graphite industry have been [illegible] appointing. The mills of the Dominion Graphite Company, the largest producers in 1912, [illegible] [illegible] other graphite plants report gr[illegible] [illegible] [illegible] the exception of the Quebec Graphite Company [illegible] ham, which worked actively t[illegible] [illegible] on experimental work.

Promising China Clay Outlook.

"Although the production [illegible] [illegible] outlook is promising. The [illegible] [illegible] working a deposit in Amherst [illegible] [illegible] have put in an experimental [illegible]

"The whole of the output [illegible] [illegible] facturers who use it as a fil[illegible]

"Notwithstanding the [illegible] [illegible] prevailed during the year, [illegible] [illegible] duction of structural mater[illegible]

compared with 1912. The figures for cement, limestone, granite and brick show increases. This indicates that, despite adverse conditions, the general development of the province of Quebec was not in any way retarded for the production of structural materials is a very good criterion of such progress.

"During the session of the Quebec legislature which has just closed, an amendment to the Quebec mining law was passed, reducing the price of mining concessions, from $20 and $10 an acre, (according to distance from railway) to a uniform price of $5 an acre.

"In 1913, according to returns received, 8,996 men found employment in the mines, quarries, clay pits and ore mills in the province of Quebec. The total wages paid amounted to $5,179,395. A certain proportion of these men were employed for part of the year only, but the majority worked 300 days."

◆

POSITION OF LA ROSE COMPANY.

Monetary Times Office,
Montreal, July 15th.

On account of the drop in La Rose to 92 on the Montreal Exchange, a new low record in its history, the street is interested in the position of the company. Recent developments at the mine have not been satisfactory and with the hope of locating new ore bodies, an aggressive development programme is being carried on by general manager Watson, this summer. The future operations of the company will depend on the results of this work. If the outcome is not satisfactory, the company will probably close down the property and distribute the surplus.

The last quarterly report of the company, dated March 31st, 1914, showed a cash surplus of $1,502,259 and ore in transit and at smelters of $213,661, a total surplus of $1,715,920. The quarterly dividend paid April 20th, took $187,328, leaving $1,341,264. This is at the rate of 1.02 for each of the $1,498,627 shares outstanding. The dividend payable July 20th will take $187,328 and will leave a surplus of $1,341,264, or 90 cents a share. This, of course, makes no allowance for the quarter's earnings. The stock is now selling ex-dividend in anticipation of the next payment.

In July of 1909, La Rose sold up to 8.46 in Montreal, this being the highest price reached here. In October came a drop to 5.60 and in November to 4.20. Although the stock worked back to $5 per share once or twice, the drop has been fairly regular, 1912 seeing it below $4, and 1913 below $2, while 1914 now sees it below $1 per share.

EIGHTH INTERNATIONAL CONGRESS OF ACTUARIES

The Eighth International Congress of Actuaries will meet in St. Petersburg, Russia, next year. The sessions of the congress will last from May 31st to June 5th. The following programme has been adopted of subjects for papers to be presented.

(A)—Subjects to be discussed by the congress.—1. The determination of probabilities and other quantities connected with social assurance. The consideration of a universal system of notation. 2. The scope and limits of the compulsory clauses in assurance contracts. 3. The practical value of select tables. 4. The calculation of mathematical reserves on office premiums. 5. The mortality among persons disabled by accident. 6. The reserve of premiums from the legal, technical and economical points of view. The rights of the policyholders to the reserves against their policies.

(B) Subjects not to be discussed by the congress.—7. Possibility of application of the theories of stability of statistical series, of frequency curves and of correlation to actuarial calculations. 8. Comparison between the mortality among the general population of a country and the mortality among assured lives. 9. The evolution of assurance law. 10. New tendencies in ordinary and industrial life insurance. 11. The effect on insurance contracts of dispensations granted on account of public calamities.

The correspondent for the United States and Canada of the organizing committee is the secretary of the Actuarial Society of America, Mr. Robert Henderson, actuary of the Equitable Life Assurance Society.

A meeting of the International Congress is held every three years in different countries.

the changes was that they were made to secure greater facilities in doing business, and for the convenience of quorums.

The report of the Trinidad Electric Company showed that after payment of bond interest and dividends a balance of $2,996 was transferred to the credit of the surplus account which now stands at $174,539.

The report of the Demerara Electric Company showed gross earnings of $143,616. After bond interest and sinking fund payment, a surplus of $18,440 was carried forward.

The gross earnings of the Camaguey Company for the year were $195,625. The surplus after all payments totalled $43,500. Commenting on the passing of the last dividend, President Archibald said that he could make no prediction as to the payment of the dividend due in September. He also stated that he opposed the declaring of a dividend unless there was certainty that payments could be continued.

◆

MINING IN NORTHERN ONTARIO

Temiskaming and Northern Ontario Railway's Receipts From This Industry

The fertility of the soils in the clay belt of northern Ontario is becoming better known every year, but it is not necessary to go back many years to find complete ignorance on this subject among many otherwise well informed people. To these the building of Ontario's government railway, north from the Canadian Pacific Railway for over 100 miles, to reach the agricultural lands of the clay belt seemed the veriest waste of money, says Mr. A. Cole, in a report on the mining industry in northern Ontario as served by the Temiskaming and Northern Ontario Railway.

The possibility of other industries helping out agriculture in building up business for the railway was considered by the promoters of the colonization idea, but with little thought of the importance these industries were soon to assume. The railway was thus started and the wisdom of the decision was soon shown in the large increases in the values of the timber limits being sold by the Ontario government.

Business Accruing from Mines.

When the railway reached the present site of Cobalt, a new chapter in the history of this enterprise was started by the introduction of the mining industry. The business of the railway due to this industry rapidly assumed prime importance and this position it is likely to hold for many years to come.

The importance of mining was further increased by the discoveries later of the silver districts of Elk Lake, Gowganda and South Lorrain, and the gold districts of Porcupine and Kirkland Lake.

Freight Revenue.

The following statement of freight revenue on the Temiskaming and Northern Ontario Railway for the years 1912 and 1913 shows the relative positions of the agricultural, lumbering and mining industries nine and ten years after the discovery of Cobalt.

	1912.			1913		
Industry.	Tonnage.	Revenue.	%	Tonnage.	Revenue.	%
Agriculture ..	56,325	$ 94,858	10	82,092	$111,928	12
Lumbering ..	95,753	150,623	17	143,660	197,383	21
Mining	247,830	400,821	44	328,366	444,499	48
Miscellaneous	163,242	260,501	29	120,078	173,551	19
Totals ..	[illegible]	[illegible]	100	684,096	$927,363	100

Under the heading of miscellaneous is placed the income from freight for construction and also the through freight for the National Transcontinental Railway.

In the above statement all business due to the prosecution of each industry is segregated without any consideration of class of commodity comprising the freight handled. Thus at a station whose business is entirely due to the lumbering industry in the vicinity, the whole of the business of that section is credited to the lumbering industry though the freight handled will comprise machinery, food-stuffs, etc., as well as lumber.

ABOUT BUTTER AND TEA

Canada's Chief Analyst Finds Little Adulteration in Either

149 samples of tea were [illegible] by inspectors of the department of inland revenue in September, October and November of last year.

Doubtless the fact that tea is subjected to careful supervision by the customs authorities at ports of entry [illegible] to do with its generally satisfactory character.

An order-in-council dated September 1, 1894, fixes certain constants for tea:—1. Ash—must not exceed 8 per cent. by weight, reckoned on the dry tea. All samples herein reported meet this requirement; 2. Water soluble ash must not be less than 2.75 per cent.; 3. Extractive matter must not be less than 30 per cent. of the weight of the tea.

Most of the samples now reported yield much more than 30 per cent. extractive, many of them giving from [illegible] to [illegible] per cent.

Legal Definition of Butter.

Four samples give slightly less than 30 per cent., but come very near the minimum limit. Only one sample is notably lower than 30 per cent.

Even these samples cannot be legally held to be adulterated, since the order-in-council does not define a method of working for extractive matters; and Dr. McGill, chief analyst, previously showed that different modes of extraction give such widely different results that until some well defined method is made obligatory the datum remains too uncertain to be strictly interpreted.

Facing is indicated in 13 samples, but is so slight as to be disregarded from the point of view of harmfulness.

On the whole, this report may be taken to prove that there is no noteworthy adulteration of tea in Canada.

A report upon 340 samples of butter collected throughout Canada by the department of inland revenue inspectors during the months of November and December of 1913 and January of this year, together with a report of 26 samples collected in March, 1913, in the district of Quebec, made for the special purpose of ascertaining whether oleo margarine was being offered in these markets, as was asserted by some parties who claimed to have knowledge in the matter. It was under the especial guidance of these parties that the market was examined; and it is satisfactory, states Dr. A. McGill, chief analyst, to find that all samples obtained were found to be genuine.

Over Three Hundred Genuine Samples.

Butter is legally defined, by order-in-council of 3rd November, 1910, as the clean, non-rancid product made by gathering in any manner the fat of fresh or ripened milk or cream into a mass, which also contains a small portion of the other milk constituents with or without salt, and contains not less than eighty-two and five tenths (82.5) per cent. milk fat, and not more than (16) sixteen per cent. of water. But may also contain added coloring matter of harmless character.

The sum of minimum legal fat and maximum legal water in butter is 98.5 per cent. of its weight; whence it appears that in a butter containing a maximum amount of permissible water, the salt, curd, lactose, albumens and other milk constituents, traces of which are always present in butter, are in the aggregate amount limited to one and one-half (1.5) per cent. If it be desired to introduce more than [illegible] per cent. of salt into butter, this must be done by cutting down the water content; and as a matter of fact, it is rare to find 16 per cent. of water in butter. Only five samples of the collection exhibited more than 16 per cent. of water.

Results of Inspection.

The following synopsis shows the results of the inspection:—

	Samples
Found genuine	[illegible]
Passed as within reasonable and [illegible] limits of error	[illegible]
Adulterated for excess of water, or for [illegible] deficiency in butter fat	[illegible]
Samples reported in appendix	[illegible]
Total	[illegible]

"SOLID AS THE CONTINENT"

Every year shows a marked increase in the number of policies for large amounts placed with the North American Life.

The fact is significant.

It proves that the Company's financial standing and business methods stand the test of expert scrutiny.

OVERCROWDING LAND IS NOT PROFITABLE

By Intelligent Planning, Larger Lots Can Be Sold for Less Price

Assuming that a real estate agent had ten acres of land to divide into city lots, would he be able to sell his lots at a cheaper rate by developing his tract so as to make (1) 88 plots of 374 square yards each, or (2) 68 plots of 600 square yards each?

The answer is not quite so obvious as it looks. Mr. Raymond Unwin, designer of the Hampstead Garden suburb, and one of the greatest living authorities on city planning, taking an actual instance from a Canadian city, shows that as a matter of fact some unfortunate persons were actually paying $60 per lot for the privilege of having the lot reduced by 226 square yards.

Cost of Road Construction.

The explanation of this seeming anomaly is found in the difference in the cost of road construction. In each case the cost of the land was $15,000; but, whereas, in the first case, the cost of the 2,520 feet of roads amounted to $30,240, making the total cost of land and roads $45,240; in the second case only 1,320 feet of roads were needed, which could be constructed for $15,840, making the total cost of land and roads only $30,840.

Hence, in the first instance, the 88 lots of 374 square yards each cost 514 per lot; while, in the second, the 68 lots of 600 square yards each cost only $454 per lot.

Some explanation of the landlord's part in this seemingly incredible folly may be found in the fact that the municipality bore about three-quarters of the cost of the roads and, consequently, the owner ignored this cost, though, of course, it fell upon the public and wasted both land and road-making operations to the extent indicated in the above figures.

The above is an extreme instance, but it is valuable as illustrating, in an exceptionally striking way, the economic unsoundness of over-crowding.

Difference in Rents.

In another very moderate example, taken from an English city, Mr. Unwin shows that plots of 261½ square yards, subdivided in accordance with correct principles of town planning, could be rented for 11¾d. per week, while plots of only 83⅓ square yards, not so subdivided, could not be rented for less than 8d. per week. To this example he subjoins the trenchant comment:—"I am quite sure that it would be very difficult for any of us to persuade a child of seven to give 8d. at one shop for 83 marbles, if he could buy 261 for 11¾d."

International Engineering Works, Limited

WORKS: AMHERST, N.S.

Montreal Toronto Winnipeg Calgary Edmonton Vancouver

TOOKE BROTHERS, LIMITED.

Tooke Brothers, Limited's, net trading profits for the twelve months ending May 31 last amounted to $45,014, against $98,840 the previous year, a decrease of $53,226, or 54 per cent.

After setting aside $5,000 to depreciation, reserve, and paying $750 directors' fees, the balance available for dividends was $39,864, equal to 4.05 per cent. earned on the preferred stock, as against the 7 per cent. paid in dividends. To pay this dividend, amounting to $68,950, the company had to draw on the surplus to the extent of $29,086.

The announcement was made at the meeting that the dividend on the preferred would be deferred for the present. This dividend is cumulative.

Profits as shown in the statement for the year recently ended were brought forward after writing off all bad debts and providing a reserve to cover probable loss on open accounts of $21,128. Total current liabilities, however, are only $244,147, as against current assets of $769,055, so the position in respect to working capital is strong.

◆

LUMBER EXPORT IS GREATER.

(Staff Correspondence.)

Vancouver, July 10th.

The oil boom throughout western Canada, resulting from the discoveries near Calgary, has caused the promotion of as many companies as any mining boom would under present conditions.

As a result of the oil discoveries, interest is being taken in the oil seepages in the Kootenay, on the lower coast, and on Graham Island, one of the Queen Charlotte group.

Service on the north shore has been extended on the line of the Pacific Great Eastern 13 miles west of North Vancouver. There is a long distance of rough construction between that point and the section which runs north from Newport. The portion over which gasoline cars are operated is well populated, especially in summer, and with reliable transportation facilities more people will go to live permanently in the newer municipalities which are so convenient to Vancouver. The railroad gives service to North Vancouver, whereas before it was by boat to Vancouver.

Although business as regards the grades of ordinary lumber is not brisk, the export for the first six months of 1914 is 1,220,000 feet greater than for the same period of 1913. The big falling off is in the domestic demand for fir. There is still a very strong call for cedar products, and everything that will cut this kind of timber is being requisitioned. The demand for cedar logs has caused these to go as high as $13, with an average of about $10 or $11. This high figure has brought about a new feature, or rather a reversion to an old. Within the past two or three years shingle mills have put in machinery to handle the log, discarding bolts. Now, however, bolts are again a marketable quantity. This will mean that small areas of cedar near at hand will be cleaned up, which was not so probable when the log only was wanted.

Although eighty thousand acres of land are to be thrown open for pre-emption this summer in the valley of the south fork of the Fraser River, definite information is not available regarding these lands.

MUSKOKA LAKES.

The words, "All Aboard for Muskoka," is a call that sends a thrill of delightful anticipation through thousands, who, having perfected their plans, are ready to depart for that [illegible] of all Canada's playgrounds. Do you wish to view [illegible] lavish handiwork? Muskoka is a constella[illegible] wildest prodigalities. All are here—fertile plains, [illegible] rugged rock-ribbed ridges, a wilderness of [illegible] rushing torrents over precipitous [illegible] on their bosoms hund[illegible] Muskoka's entrancing vision of [illegible] District Passenger [illegible] Union Station, Toronto.

COBALT ORE SHIPMENTS.

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended July 10th, 1914:—

Dominion Reduction Company, 86,330; Penn-Canadian Mine, 49,920; Cobalt Lake Mine, 61,300; O'Brien Mine, 63,540; Hudson Bay Mine, 86,070; Trethewey Silver Company Mine, 123,600; Temiskaming Mine (Kerr Lake), 54,220; total, 525,070 pounds, or 262 tons. The total shipments since January 1st, 1914, are now 21,178,093 pounds, or 10,589 tons.

In 1904 the camp produced 158 tons, valued at $316,217; in 1905, 2,144, valued at $1,437,196; in 1906, 5,835 tons; in 1907, 4,850 tons; in 1908, 29,366 tons; in 1909, 20,941 tons; in 1910, 34,041 tons; in 1911, 25,089 tons; in 1912, 21,509 tons; in 1913, 20,261 tons.

CALGARY STOCKYARDS.

(Special Correspondence.)

Calgary, July 9.

A deadlock exists between the city and the Canadian Pacific Railway in the stockyards matter and the negotiations which have been in progress for some time are apparently about to be abandoned. The Canadian Pacific Railway is willing to let the city have its interests in the yards for $200,000, but the aldermen are not prepared to give more than $170,000, consequently the company proposes to go ahead with the improvements it had planned for accommodating the extra business. For the six months of the present year the exports of live-stock through Calgary amounted to $3,304,838, consisting of 2,027 carloads. Hogs alone increased nearly 300 per cent. above the June marketings of a year ago. In its effort to provide for the future the city seems committed to the policy of municipal ownership and operation of the yards, but if no agreement can be reached with the Canadian Pacific Railway, then the whole question must remain in abeyance as the railway company appears to have an exclusive franchise. Meanwhile, the farmers and stock raisers of this district are in the cattle producing business to stay.

In the absence of any authenticated strikes of oil by the drillers, oil stocks have declined this week, except in a few instances. New companies are still being formed, but the sale of shares in the new offerings is not very brisk. The best estimate of the drilling rigs now on order by the various companies places the number at 30.

Crop conditions continue normal to the season. Rain covered most of this district again early in the week. There is no lack of moisture until the south country is reached.

AT LAST!

A real Accident Policy—

One that has no "frills" (which are seldom cashed in by the average man), but instead gives more for everyday accidents—

The kind that happen oftenest.

And back of it—

A powerful, compelling national advertising campaign in the best magazines and weeklies, reaching millions of people every month! Think what this means to the agent who sells the Equity-Value policy!

Widespread knowledge of the policy and the Company by those you solicit—

Half your work done in advance.

Definite inquiries from interested prospects to work on—

Oughtn't you to be able to sell three of these policies where you used to sell one of the old?

The first agent in your city to handle this will reap a harvest.

Write us today for agency particulars. Please mention this paper.

MOOSE JAW, [illegible] 14th, 1914.

To His Worship, the Mayor,
Councillors and Ratepayers,
City of Moose Jaw:

We have audited the books of the City from January 1st to December [illegible] and certify that the statements which we now submit, and which are annexed hereto, [illegible] correctly state the financial position of the City at December 31st, 1913, and the result of the [illegible] of its various Departments and Utilities for the year then ended according to the said books, [illegible] and explanations submitted to us during the progress of the audit, subject to the following reservations:

The tax roll had not on December 31st, 1913, been brought into [illegible] with the general ledger controlling account. We therefore cannot include any clearance thereof in this certificate.

The inventory of stores and supplies was not taken [illegible], and we therefore assume no responsibility as to the values as represented by the [illegible].

We acknowledge continued courtesy from all those of your staff [illegible] in the prosecution of our work.

Respectfully submitted,

(Signed) RONALD, TRIGGS AND COMPANY,
Chartered Accountants.

Production Rather Than Construction

THAT *has been the policy of Nova Scotia, with the result that the Province has stood the strain of the financial stringency better than any other part in Canada.—Mortgage Lending in Nova Scotia.*

By F. B. McCURDY, M.P.

FIFTEEN years ago the investment situation in Nova Scotia was of practical and immediate interest to all Canadian life insurance companies, and also to British and United States companies doing business in Canada. It is not so to-day. The interest of life underwriters in the province may be as great as it ever was, but the direct interest of the companies themselves, financialwise, has changed.

At that time, the life insurance companies found investment for a considerable portion of their funds in the purchase of the bonds issued by our province, cities, counties, and towns, and the purchases of such securities by these companies was the base on which investment values for the province rested, and governed the ruling interest rate. Such a condition has, however, long since disappeared.

The opening and exploitation of the great Canadian West has created a demand for capital at abnormal rates of interest, and Western issues have accordingly absorbed life insurance funds which formerly found their way into our market. Those responsible for the investment of life insurance moneys have paid more attention to the high interest yield than to a careful Dominion-wide distribution of their loan risk, and not only so, but concurrently local banks, of which five were a few years ago centred in Halifax, have not only largely ceased investing in the securities mentioned above, but they, and the bigger banks into which they were merged, have withdrawn a large part of their funds formerly invested in the bonds of cities, towns and municipalities of the province.

With this all-important insurance and banking support withdrawn, one would have expected a slump in values much more pronounced than has occurred.

A depreciation has taken place, but not to the extent anticipated. The interest yield on bonds issued by cities and first-class towns in the province has risen from the 4 per cent. of fifteen years ago to the 4½ per cent. and 5 per cent. of to-day, or an appreciation in the interest yield of something less than 25 per cent. A comparison with prices ruling in other provinces of Canada will show that, with the exception of New Brunswick, where similar conditions exist, there has taken place less of a fluctuation than in any other province of Canada.

Nova Scotia has, with one or two exceptions, no cities of sufficient size to attract investment purchases in their bonds from overseas, and has consequently been driven to depend on local capital to supply the borrowing needs of cities, towns and municipal bodies, and to care for the sale by banks of a part of their investment holdings.

The stability of the market in the face of these facts and the financial strain and increased value of money during the past few years, demonstrates the fundamental financial soundness of the province. It is my opinion that fundamental conditions are as sound to-day in Nova Scotia as in any part of the world. The production of wealth in the maritime provinces has always greatly exceeded consumption, and this surplus has been piling up year after year as a great cash reserve.

In a period when serious depreciation has been occurring in the securities issued by municipalities, and particularly smaller towns, the cash savings in Nova Scotia have been sufficient to not only absorb the municipal offerings in the province, but substantially to increase the amount of savings deposited in chartered banks, and utilized for loan in other parts of Canada, where the demand is insistent and interest rates high, but also to increase [illegible] the amount of money invested in life insurance endowment policies, as I am sure a reference to the records of such companies will demonstrate.

Concurrently with the above, mortgage lending in Nova Scotia by outside individuals and companies has [illegible]. All [illegible] within the province have, generally speaking, [illegible] sound wealth and the accumulation of real [illegible]. The [illegible] have been able to take [illegible] the [illegible]. During the [illegible] of the past [illegible] has [illegible] per cent.

A [illegible] at the [illegible] speculative [illegible] and other enterprises. The [illegible] of these [illegible], and will also have the effect [illegible] the immediate future more largely [illegible] municipal bonds and soundly based [illegible] securities in the province.

One may ask how it is that the province has been able to accomplish the above results, and I would state that the two outstanding reasons are: First, the character and habits of the people. Nova Scotia's most valuable asset is in the character of its population. The standard of intelligence, if I may use the term, in this province is exceptionally high; education is rightly considered of prime importance, and the people are thrifty, frugal and industrious. Second, the resources of the province are extremely varied, and produce year in and year out a steady revenue, sufficient to support a thrifty population in comfort and happiness, and enable the industrious citizen to steadily put by something for a rainy day.

Production of Wealth.

To illustrate the annual production of wealth, I give below a statement published by the Halifax Chronicle, on January 1st last, showing the estimated production of wealth in the province for 1913, and a reference to the New Year numbers of that paper will show that the annual amount fluctuates very little year by year, each one showing a gain on its predecessor:—

Year, 1913. Source.	Amount.
Coal	$ 22,500,000
Coke	2,600,000
Gold, and other minerals	125,000
Gypsum, limestone, etc.	800,000
Building materials	410,000
Pig iron	2,500,000
Steel, steel rails, rods, etc.	17,550,000
Fisheries	8,000,000
Manufactures, ship and freights	46,250,000
Products of farm	31,100,000
Products of forest	5,000,000
Game and furs	500,000
	$137,335,000

The population of the province at the time of the last census, 1911, was 492,338, so that the average production per head was approximately $280, or, taking five members to a family, $1,400 per home. There are other advantages of great importance; for instance, the resources are concentrated, and navigation is open twelve months of the year. No part of the province is situated more than fifty miles from tide water, so that the matter of expensive transportation can never become so burning a question in Nova Scotia as it has and must be, owing to geographical reasons, in some other parts of Canada.

Have Met Financial Strain.

During a period when other parts of Canada were paying attention particularly to the construction of works yet to become productive, the activities of the residents of Nova Scotia have been devoted largely to the actual production of wealth. The result has been that in Nova Scotia, generally speaking, liabilities are small, and a consultation with bankers will disclose that during the financial strain of the past two years payments in this province have been better met, and there has been less interference with the volume of business there than in any other part of Canada.

When it became apparent some ten or fifteen years ago that not only was outside capital to stop flowing to Nova Scotia, but also that part of the invested capital was to be withdrawn, the situation was met by our people undertaking to supply their own capital. They have succeeded, we must admit, in a marked degree, and the demonstration has been so apparent that the province had, two or three years ago, become a happy hunting ground for the vendor of unproductive real estate and such like.

With Local Capital.

In the finding of money for the enlargement of native industries, errors of judgment have doubtless been made, and such errors will be made so long as such activities continue. It is estimated that, notwithstanding the disappointments and losses which have occurred in connection with the organization and financing of Nova Scotia industries, the amount of Nova Scotia money locked up during the past five years in unproductive real estate and other like ventures in other parts of the world, ten times exceeds the losses incurred within the province.

Disappointing investments within the province have temporarily checked investment in local securities of a speculative class, but the relative loss in outside investments has been so much larger that the resumption of purchase of local securities will doubtless ensue and give assurance that legitimate enterprises in the province can be financed and developed by means of local capital.

I am sure that all borrowing bodies in Nova Scotia would welcome a return of the inflow of life insurance funds for investment.

Should Invest in Nova Scotia.

It has always seemed to me a reasonable proposal that, approximately, to the extent that a life insurance company derives its accumulated funds from within a province, these funds should be reinvested in securities within that province. The insurance company may answer that owing to higher interest rates obtainable elsewhere, the best interest of the policyholder would be served by concentrating the company's investments in places where very high rates prevail. But the experts who administer such funds know that abnormal rates always carry a disclosed or undisclosed risk. The same argument which their underwriters utilize in the solicitation of a policy from an individual, viz., that life insurance is sound because it is founded on the distribution of hazard over a wide area, should apply with equal force in the investment of their accumulated funds.

Besides, there is a growing public opinion which favors a fair distribution of the incidental benefits which are controlled by large companies in their operations, and inasmuch as the good will of the public is likely to become more and more necessary to the permanently successful operation of our great semi-public corporations (for such are life insurance companies), it would seem to be the part of wisdom and good policy for those responsible for the investment of the growing funds of life insurance companies to distribute their capital and turn a fair proportion of the fertilizing stream of investment into the districts from whence it rises, even should that policy seem to entail a present apparent curtailment of earnings.

Total, Nova Scotia	168,181	[illegible]5,236	$67,162,[illegible]11	$7,743,529	$40,[illegible]

Nova Scotia is an important manufacturing province, as will be seen from the above table. The figures therein are taken from the census for the year 1910. Since then the totals have increased considerably. The diversity of manufactures is realized by a glance at a list of the industries in which the province is engaged: Aerated and mineral waters, boats and canoes, boilers and engines, boots and shoes, boxes (wooden), bread, biscuits and confectionery, brick, tile and pottery, butter and cheese, carriages and wagons, clothing (men's, custom), clothing (men's, factory), clothing (women's, custom), cooperage, cottons, dyeing and cleaning, electric light and power, fish (preserved), flour and grist mill products, foundry and machine shop products, furniture and upholstered goods, housebuilding, iron and steel products, leather (tanned, curried and finished), liquors (malt), log products, lumber products, masts and spars, monuments and tombstones, plumbing and tinsmithing, printing and bookbinding, printing and publishing, rubber clothing, ships and ship repairs, slaughtering and meatpacking, tobacco, cigars and cigarettes, vinegar and pickles, wood pulp (chemical and mechanical), woodworking and turning, wool (carding and fulling), and woolen goods.

In 1910, there were 1,480 industrial establishments in the province employing capital of $79,596,341. Besides manufacturing, there is a large number of other important industries in Nova Scotia. Some details of these were recently issued by the Nova Scotia branch of the Canadian Manufacturers' Association.

Possibilities of Agriculture.

In the province there are only about 50,000 occupiers of farms, which take up only 39 per cent. of Nova Scotia's 13,483,671 acres. This lack of agricultural population is due to three things—the rush for the free wheat lands of the West, the attractive wages offered in cities, and the flood of immigration flowing past the Maritime Provinces to Quebec, Ontario, and the West. But now there is a distinct improvement in all directions—as the native sons as well as newcomers begin to realize the ideal conditions for mixed farming which the province possesses.

First, there are the large tracts of immensely fertile dyked meadows that have been reclaimed from the sea. The land lies about the headwaters of the Bay of Fundy and its river tributaries, and yields easily from two to four tons of hay per acre, besides affording tall pasturage for large herds of cattle. The intervale land, which is covered by the spring freshets, is an equal source of profit to the farmer.

Second, there is the splendid fruit country in the valleys of the Annapolis, Gaspereau and other rivers around Digby and Minas Basin. Here the bright, sunny weather of summer and autumn combine with other conditions to bring fruit, particularly apples, to a state of perfection rarely excelled. About 1,000,000 barrels of apples are grown yearly, which, combined with smaller fruits, make a total value of nearly $3,000,000.

Third, there are the dry uplands, where conditions are particularly adapted for the production of the highest quality of hay, roots, potatoes, oats and other grains. Wheat is also raised in sufficient quantities to supply at least the [illegible] household needs. The [illegible] broken [illegible] make excellent pasturage for sheep, which is an industry of great possibilities, and splendid profits.

The Apple of Nova Scotia's Eye.

The fruit industry [illegible] a higher state of development than any of the other [illegible] agriculture [illegible] as late as 1880 only [illegible] of apples were [illegible]. Since then there has been [illegible] increase [illegible] over [illegible] barrels were shipped out of the province. Yet in the Annapolis Valley [illegible] of the [illegible] has been [illegible] and there are large tracts elsewhere [illegible] have [illegible].

[illegible]

[illegible] fodder for his live-stock, has [illegible] the home table [illegible] his [illegible] upon his land for the [illegible] and some of the luxuries of life.

BANK OF NOVA SCOTIA TAKES METROPOLITAN

Terms of Amalgamation Announced Yesterday—Bank Raised to Fourth in List

The Bank of Nova Scotia has absorbed the Metropolitan Bank. The assent of the minister of finance has been obtained and the shareholders of both institutions notified. The terms under which the Metropolitan becomes a part of the Nova Scotia are $200 in cash and one share of the Bank of Nova Scotia stock for each two shares of the Metropolitan Bank. As an institution the Metropolitan Bank receives $1,000,000 in cash and 5,000 shares of the Bank of Nova Scotia stock.

The market price of shares of the Bank of Nova Scotia has recently been around $264. On Thursday's market Metropolitan stock stood at $205 bid, and under the terms of the agreement the stock figures out at $232 per share. The negotiations were so well guarded, however, that transactions in both issues have been nominal.

To *The Monetary Times* yesterday, Mr. James Ryrie, one of the directors of the Metropolitan, said:—"The matter was kept an entire secret. I do not believe there has been any speculation whatever, in any quarter, in the banks' stocks, on the strength of the amalgamation."

Capital and Directorate.

The Bank of Nova Scotia has paid-up capital of $6,000,000 and a reserve of $11,000,000, while the Metropolitan Bank has paid-up capital of $1,000,000 and a reserve of $1,250,000.

The president of the Metropolitan Bank, Mr. S. J. Moore, and the general manager, Mr. W. D. Ross, will join the board of the Bank of Nova Scotia, and the members of the staff of the Metropolitan Bank will enter the service of the Nova Scotia and rank on the combined pension fund.

The Bank of Nova Scotia has a capital and reserve account of $17,000,000, and its rate of dividend to shareholders is 14 per cent., while the book value of its stock is $284 per share.

The directors of the Bank of Nova Scotia are: Messrs. John Y. Payzant, president; Charles Archibald, vice-president; G. S. Campbell, J. Walter Allison, Hector McInnes, Hon. N. Curry, J. H. Plummer, Robert E. Harris, James Manchester, W. W. White, M.D.

The directors of the Metropolitan Bank are: Messrs. S. J. Moore, president; D. E. Thomson, K.C., vice-president; Sir W. Mortimer Clark, K.C., John Firstbrook, James Ryrie, W. D. Ross.

Fourth in the List.

The amalgamation will place the Bank of Nova Scotia fourth in the list of Canada's chartered banks.

The total deposits of the combined banks will aggregate $67,043,789, and the total assets $94,142,284. The net profits of the combined institutions in 1913 were $1,392,662.

The merger will reduce the number of chartered banks in Canada to 23.

Speaking to *The Monetary Times* yesterday, Mr. D. Waters, the assistant general manager of the Bank of Nova Scotia, stated that the bank would not have to hold a meeting to authorize an increase of its capital, as had been stated in some quarters, as it already had authorized capital of $10,000,000, which is more than sufficient for the purpose of the amalgamation. Mr. H. A. Richardson, general manager of the bank, is in England at present.

Mr. W. D. Ross, the general manager of the Metropolitan Bank, told *The Monetary Times* that he had nothing to add to the announcement, already made, of the merger. The shareholders of the bank would have to approve of the terms, he added.

IMPERIAL LIFE'S NEW OFFICERS

Mr. G. A. Morrow has been elected as president of the Imperial Life Assurance Company, succeeding Mr. H. C. Cox, who has been made president of the Canada Life Assurance Company. [illegible] K.C., is made vice president of the Imperial Life Company.

PREPARING FOR PANAMA CANAL

British Columbia is Making Many Improvements at Victoria, Vancouver and Elsewhere

Writing to *The Monetary Times* as to what is being done in British Columbia to prepare for Panama Canal trade, Mr. G. Wynn Wilson, of the Colonial Investment Company, Vancouver, says:—

"In Vancouver, the waterfront is owned by the Canadian Pacific Railway, so that they will bulk largely in improvements. Well, the Canadian Pacific Railway are just completing one pier that will accommodate five vessels. It has a double decked freight shed connected above the Canadian Pacific Railway tracks with the business portion of Vancouver. They are filling in with rock their present trans-Pacific pier and are to considerably lengthen this, in addition to constructing a similar pier in the near future. Their two million dollar station, now almost completed, was built largely with a view to increased traffic following the opening of the Panama Canal, as was their Vancouver hotel, the largest in Canada.

"Both the Great Northern and the Grand Trunk Pacific have recently completed big piers for deep sea vessels. The Dominion government have under construction a pier that will cost about two million dollars, including the site. They are to build this year on the same site, a large grain elevator. Across the harbor in North Vancouver, an English company have broken ground for the construction of one of the biggest dry docks on this coast, and a shipbuilding plant. A twelve hundred foot concrete pier in North Vancouver has also been recently completed.

"In Victoria, the Dominion government are constructing a dry dock that is to cost two and a half millions and in Prince Rupert the Grand Trunk Pacific are preparing actively for increased business.

"The Dominion government have been working on the Fraser River, removing the bar, for almost a year. They have now a minimum depth of 35 feet for over 20 miles up the river and a depth of 40 feet is to be provided before the end of this year. New Westminster has a harbor scheme to cost six millions, and the first half million dollar unit is nearing completion. That city owns several miles of water frontage, and their plan provides for wharves along its whole length. At Port Mann, the Canadian Northern Railway freight terminus across the river from New Westminster, plans are prepared for over a mile of wharves, of which the first 1,000 feet section has been completed."

◆

IMPERIAL GUARANTEE'S CHANCES

Mr. H. C. Cox has been elected president of the Imperial Guarantee and Accident Company, succeeding the late Mr. E. W. Cox. Four new directors have also been appointed as follows: Messrs. A. McT. Campbell, provincial manager, Canada Life, Winnipeg; W. B. Meikle, manager, Western Assurance Company and British-America Insurance Company; W. G. Morrow, general manager, Toronto Savings and Loan Company, and E. Willans, general manager of the company, becomes managing director.

◆

The Home Bank's business in Calgary having increased considerably during recent years, a branch will be established there shortly. The business has been done from the Winnipeg office of the bank in the past. A local manager has not yet been named for the appointment.

A life insurance man who comes out of his office in the morning and looks first up and then down the street with his hands in his pockets, wondering whether he will go one way or the other, is not a life insurance man at all, although he may be trying to do the business. He should know at once where to go and whom to see. When he stops, hesitates, and wonders, it is a sure sign that he is not a life insurance man.—Excelsior Banner.

LOAN AND SAVINGS COMPANIES

Methods of Valuing Properties—How to Select the Company

"Over £50,000,000 has been invested in Canadian loan and mortgage companies and reports of 14 loan companies show that in 1913 £11,000,000 was received from Great Britain," writes Mr. Hume Cronyn, manager of the Huron and Erie Loan and Savings Company in the Scottish Bankers' Magazine.

The average conservative loan company confines its lending to advances upon the security of first mortgages over freehold property, although a proportion of its assets may be invested in municipal debentures or carefully selected bonds so as to provide a fund which by sale or pledge may be available in times of stress. Drawing the line still tighter, many companies will lend only on productive real estate; and others, more careful still, restrict their operations to the more settled parts of the country, and by refusing to consider advances on manufacturing establishments, hotels, or apartment houses, confine their operations to farm lands and moderately-priced properties within the larger cities of Canada.

The ideal mortgage loans are, first, those to a bona fide farmer resident in a good district, whose cultivation, buildings and fences testify to his character; and second, those on substantially-built residences of not too high a cost situate in an established and growing city.

Practically all the larger mortgage companies employ throughout the districts in which they lend local agents who are paid by commission. These men know from experience what class of loan will be favorably considered, and such they forward to the company upon an application form which, if properly filled up, gives complete information regarding the proposal. Frequently a report and valuation by the local appraiser accompany the application, and with these before it the company determines whether the loan shall be further considered or declined on the spot. This may be termed the first test, and as a rule it excludes only those loans of a nature which the company does not favor.

Chief Test is Inspector's Visit.

The second test, and perhaps the most important of the series, is now applied. That member of the company's staff employed solely by the company and known as its inspector, proceeds to visit the proposed security subject and to make thereon his own exhaustive report in writing. No careful company is without one or more inspectors, whose sole occupation is to cover the territory in which it does business, and to report daily upon proposals for new advances and upon loans already in existence.

While in many of the cities may be found reliable valuators whose ability and knowledge of local conditions enable them to estimate correctly the worth of real estate in their neighborhood, yet even here the opinion of the company's inspector is to be preferred. He sees not only the condition and progress of that particular city or county but those of a score of others besides, and is able by comparison to check the too optimistic views of purely local judges. As a tribute to the conservative judgment displayed by loan company inspectors, the protest is often heard that they unfairly discriminate against certain localities, and that they refuse to raise their figures in the face of an excited and rapidly advancing market.

With the application and inspector's report in hand the third and final test is applied: after review by the manager or other official charged with that duty, the proposal comes before the company's directors, and at a full meeting is passed upon by them. This is no slipshod or matter of course examination. Each member of the board has before him the essential figures relating to the loan; the inspector's report and recommendation are produced and read, and in all but the choicest of loans a full discussion ensues. When it is remembered that the majority of the board have many years of experience in this particular line of work, and that each week they pass in review numbers of loans, it will be conceded the final test should be fairly conclusive.

Granted that a proper valuation has been made and a reasonable advance agreed upon, the mortgage executed and the title searched and certified to by the company's solicitor, the loan is then recorded upon the company's books and enters into the charge of quite another department. [illegible] throughout [illegible] mortgage [illegible] than 4 [illegible] value, but [illegible] rule [illegible] years.

In the [illegible] history of lending in Canada, the [illegible] the [illegible] was to make the principal of mortgages payable at the end of [illegible] long term [illegible] When [illegible] the [illegible] mortgages, and [illegible] ago, the legislature [illegible] that, despite any agreement to the contrary, a mortgage drawn for a longer term might be paid off at the end of five years from its date, with a bonus of three months' extra interest.

This law, at first passed by the Dominion parliament and later [illegible] into the [illegible] of the provinces, resulted in fixing the mortgage term, in the great majority of cases, at five years. It is [illegible] that this law was, in addition, largely responsible for establishing the same term as the normal life of debentures issued by mortgage companies.

Must Repay Instalment of Principal.

Later on, guided partly by experience and partly perhaps by the example set by the best banking practice, progressive loan companies made it a rule that, in addition to the interest, the borrower must repay by half-yearly or yearly instalments a substantial portion of the principal. These repayments are not fixed on any definite scale, and vary from 2 to [illegible] per cent. of the original loan. There is no one fact which has strengthened the position of loan companies more than this salutary practice [illegible] less highly [illegible] to the borrower, he is usually quite as much benefited as is the lender [illegible] sensibly reduced [illegible] remaining [illegible] book. It [illegible] be [illegible] that every [illegible] and [illegible] may with safety be waived. But the mere fact that a demand to this effect is made brings before the lender the condition of the [illegible] and gives him the opportunity [illegible] investigation into the borrower's [illegible]

[illegible] the Canadian [illegible]

How to Analyse Position.

[illegible] What [illegible] What [illegible] of inspection or [illegible] the company's auditors [illegible] What [illegible] compared to dividends [illegible]

As much of this information must be gathered from the company itself, it may not be accepted as wholly conclusive, but taken in conjunction with the main features above outlined, it should enable one to form a sound judgment of the question at issue.

◆

PERSONAL NOTES

Sir Robert Borden and Sir Wilfrid Laurier will tour western Canada this fall.

Mr. J. Stewart Tupper, K.C., Winnipeg, has joined the directorate of the Standard Trusts Company.

Mr. Edward S. Goudge has been appointed secretary-treasurer of the Halifax Fire Insurance Company.

Mr. John A. Tory, according to gossip, shortly may receive an important appointment in life insurance spheres.

Dr. William Hamilton Merritt, St. Catharines, has been appointed a director of the National Life Insurance Company.

Mr. Fred Dean, of Toledo, O., representing Messrs. Terry, Briggs & Slayton, bond brokers, has been visiting Vancouver and other points.

Mr. E. Geoffrey Hoare, late of the Glyn Mills, Currie and Company, London, England, has been appointed a director of the Bank of British North America in place of the late H. J. B. Kendall.

Mr. George D. Brymner, for twenty-six years manager of the Bank of Montreal at New Westminster, has been appointed assistant superintendent of branches in British Columbia of that institution.

Mr. A. H. Hoover, who will be remembered in connection with the early history of the Sovereign Insurance Company in Canada, has organized the California Standard Life Insurance Company, of San Francisco.

Mr. W. G. Falconer has been elected assistant secretary of the Hartford Accident and Indemnity Company. He was formerly associated with the General Accident at its Perth, Toronto, Melbourne and New York offices.

Mr. Thomas Ogilvie, head of the Toronto wholesale dry goods merchants, Messrs. Thos. Ogilvie & Sons, who died in February last, left an estate valued at $592,260, of which $207,140 was invested in Toronto. The latter amount represents his interest in the local business and property on Bay Street.

Mr. G. Herbert Wood, of Messrs. Wood, Gundy and Company, has returned to Toronto after a stay of two years at the head of the company's London office. Mr. Wood says funds are plentiful in England, but there is an absolute lack of confidence in practically all kinds of securities. Mr. McIlraith is now in charge of the firm's London branch.

Mr. J. W. Mackenzie has become associated with Mr. T. H. Hudson as joint general manager of the Canada Accident Assurance Corporation. Mr. Mackenzie will for the present make his headquarters in the Canadian Mortgage Building, 10 Adelaide Street East, Toronto. It is the company's intention to extend its field of operation, and the best of facilities will be afforded productive agents for doing excellent business. The policies of the Canada Accident Assurance Corporation are guaranteed by the Commercial Union Assurance Company.

Mr Samuel Price, K.C., has been appointed chairman of the Ontario Workmen's Compensation Commission. He will confer with Mr. F. W. Hinsdale, the Washington expert engaged by the government, to put the act in force at once. Mr. Price has served the governments of Ontario and Canada for many years in various capacities. He has been a royal commissioner in investigations, he is a prominent mining and railway legal expert, and has at different times helped to frame laws and settle disputes in these industries. He once declined the chairmanship of the Ontario Railway Board. Speaking of the appointment Premier Whitney said:—"We selected Mr Price from a list probably containing more names of able men than ever came before a government in Canada before. We chose him after considering all and we believe we have got the best man. The people of Ontario [illegible] the Compensation Act in force. We believe [illegible] in the world and will be a success. No question [illegible] of the individual was considered [illegible] making this appointment."

HERBERT COX AT HEAD OF CANADA LIFE

Appointment Made by the Directors at Toronto this Week

Mr. Herbert C. Cox this week became the president and managing director of the Canada Life Assurance Company, thus succeeding his father, Senator Cox, and his brother, Mr. E. W. Cox, both recently deceased.

Mr. Cox has for long been connected with the life insurance business, and has worked his way up from the bottom of the ladder. His first position with the Canada Life was as a stenographer in the company's eastern Ontario branch. That was in 1893. Step after step he took until he became the manager's assistant in that branch. The management of the company's branch in the State of Michigan becoming vacant, Mr. Cox was ready and well qualified to accept that position. Later he came to the head office of the Canada Life, and a few years ago, when changes occurred in the Imperial Life management, he became president of that corporation, ably fulfilling the exacting duties which came that way, until the present time.

MR. HERBERT C. COX.

Elected President and Managing Director of the Canada Life Assurance Company.

The new president of the Canada Life has not only a remarkable grasp of the details of the life business, but he has persistently proved his ability as a writer of big business. For instance, when he was managing the Michigan branch, the production of new business there in 1911 amounted to $2,673,520, being over 18 per cent. of the entire new business of the company. He has kept well posted on the doings of other companies, and has not allowed his own to lag behind. Of the "inside" history of insurance deals and of the careers of insurance men, Mr. Herbert Cox is a walking encyclopoedia. In short, he is thoroughly equipped as a life insurance man, of practical experience and ability.

As a member of the Life Underwriters' Association of Canada, he has rendered good service. He has been chairman of the executive committee continuously since its organization in 1906, except in 1907, when he was president. In the same year he was also made vice-president of the National Association of the United States, being the first Canadian elected to that office. Mr. Cox was in 1911 president of the Toronto Association.

Mr. Cox is also a director of the Dominion Securities Corporation, Toronto Savings and Loan Company, Central Canada Loan and Savings Company, the Robert Simpson Company, and the Imperial Guarantee and Accident Company, and other institutions.

CANADIAN ISSUES CONTINUE TO BE MADE IN LONDON

(The following cable messages of the Canadian Associated Press and the Montreal Star are printed by special arrangement.)

SOUTHERN ALBERTA LAND

†London, July 15.—The Southern Alberta Land report, issued to-day, gives little fresh information, the position having already been explained in circulars. At the meeting next week it is proposed to appoint a committee of shareholders to confer with the board.

CANADIAN NORTHERN ISSUE

†London, July 20.—The underwriting is proceeding of the issue of fifteen million dollars guaranteed four per cents. on the part of the Canadian Northern Railway. The principal and interest are guaranteed by the Dominion Government. The stock is redeemable in 1944 and the price is 94.

Commenting on this, a London cable to the Montreal Gazette says:—"It was generally conceded that the company had secured an exceptionally good price for the issue, which has been underwritten at 93, and will be offered for subscription at 94. The last Dominion of Canada loan, 4 per cent., was at 98, and the older provinces have been getting around par for 4½'s. Similar companies from foreign countries have hardly been getting better than or as good as the Canadian Northern Railway price for issues carrying 5 per cent. interest. The price secured would presume a better feeling in London towards Canadian enterprises than is generally conceded at the moment. The loan will come out, under the auspices of Lazard Freres, a strong house with important connections at all large financial centres."

The New York house of Wm. A. Read and Company, which was at the head of the syndicate of New York bankers formed to take over the entire $45,000,000 issue, offered a price which neither the government nor the railway corporation cared to accept.

ONTARIO STOCK ISSUE IN LONDON

†London, July 16.—The prospectus of the $[illegible] Ontario issue 4½ per cent. registered stock at par makes its appearance to-day. The object of the loan is stated to be to provide funds for the purpose of public service and for works carried on by commissioners of the province, for the covering of any debt on open account and for paying any floating indebtedness. The revenues of the province alone are liable in respect of the stock and dividends. A sinking fund of ½ per cent. per annum will be provided in respect of the stock, which is redeemable at par on January 1st, 19[illegible]. The Government retains the option to redeem the [illegible] at par from January 1st, 1945.

*London, July 21.—The underwriters take 89 per cent. of the Ontario Government's loan of £1,000,000 4½ per cent. issue at par. The comment of a leading banker is: "Looks bad, perhaps, but the public will soon take it all."

†London, July 21.—Underwriters are not taking a gloomy view of poor public reception for the Province of Ontario loan. The small amount of immediate applications is undoubtedly due to the tendency of the public to wait until lists have closed in the hope of purchasing at a discount.

In spite of the late happenings in connection with Canadian financial houses in London, there is no doubt, says one authority, that the Canadian position is better than it had been for some time. A good harvest [illegible] Canada [illegible] there will be an end to this present [illegible] in Canadian matters.

CANADIAN SECURITIES LISTED

London, July [illegible].—The scrip of Province of Quebec [illegible] 4½ per cent. and [illegible] fours have been listed on the London Stock Exchange.

WINNIPEG'S ISSUE IS LOW

†London, July [illegible].—The greater Winnipeg water [illegible] stands at two discount. Although loans from Winnipeg are well known in London, says one authority, this one was [illegible], of course, a cloud still hangs over Canadian things generally. Even such a sterling English issue as six per cent. preference of the well-known shipping firm, Lamport and Holt, were left with the underwriters to the extent of thirty-two per cent.

HAD GOOD EFFECT IN LONDON

London, July 1[illegible].—The frank statement issued by Sir Thomas Shaughnessy, president of the Canadian Pacific Railway, with reference to the financial affairs of the company, in answer to the attacks made on the company's shares by the bear speculators, has had a good effect here.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED.

The following fires were adjusted by J. S. Rankin, Vancouver, B.C.:—

South Vancouver, B.C.—June 16—Mr. Baker's dwelling. Loss on contents, piano, $145. Cause, gasoline stove. Insurance, Niagara Fire Insurance Company, piano, $200.

Mission, B.C.—June 27—C. Fontaine's dwelling. Loss, building, $670; contents, $745. Cause, cat upset coal oil lamp. Insurance, Pacific Coast Fire Insurance Company, building, $500; contents, $500.

Nanaimo, B.C.—June 18—M. W. McLennan's dwelling. Loss, building, $990; contents, $495. Cause, defective chimney. Insurance, Phœnix Assurance Company, Limited, building, $900; contents, $300.

Harrison Hot Springs, B.C.—June 17—T. Weaver's farm dwelling. Loss, building, $1,350; contents, $640. Cause, defective chimney. Insurance, Norwich Union Fire Insurance Society, building, $1,000; contents, $500.

Maillardville, B.C.—June 6—George Wright's dwelling. Loss, building, $2,265; contents, $1,600. Cause, overheated stove. Insurance, Aetna Insurance Company, building, $1,000; contents, $1,000. Liverpool Manitoba, $700, piano player.

Van Anda, B.C.—June 19—Paul and Sumner's restaurant. Loss, building, $125; contents, $75. Cause, kitchen range too near wall. Insurance, Guardian Assurance Company, Limited, building, $100; contents, $50; S. Hanley's store. Loss, building, $885; contents, $550. Cause, burning of building next door. Insurance, Phœnix of London, building, $900; contents, $1,350.

North Vancouver, B.C.—June 27—Rudolph Shoebinger's dwelling. Loss, building, $950; contents, $895. Cause unknown. Insurance, Liverpool and London and Globe, building, $500; contents, $500; Thos. Robinson's dwelling. Loss, building, $50; contents, $90. Cause, destruction of adjoining building. Insurance Insurance Company of North America, building, $200; contents, $100.

Vancouver, B.C.—May 17—Estate John Ward, dwellings. Loss on building, $246. Cause, sparks from chimney. Insurance, Liverpool-Manitoba, building, $2,000.

June 3—Roberston and Hackett's saw mill plant. Loss, building, $325; contents, $650. Cause, sparks from burner. Insurance, building, Boston Insurance Company, $5,000; Lloyd's, $7,275; North River Insurance Company, $3,225; Pacific Fire Insurance Company, $10,800; Stuyvesant Underwriters, $15,000.

June 19—W. H. Gallagher's restaurant, paint shop and offices, occupied by R. D. Brewis. Loss on building, $150. No insurance: on contents, $147.50. Cause, sparks from chimney. Insurance, contents, British Dominions General Underwriters, $500; Firemen's, $500.

June 23—J. M. Hutchison's dwelling, occupied by Mrs. Thorn. Loss, $1,008. Cause, supposed tramps. Insurance, building, Phœnix of London, $2,000.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

National Steel Car Company.—The company has let the contract for an extensive addition to its pa[illegible] department. It has secured orders for equipment and passenger cars.

North Dome Company.—Mr. Justice R. M. Meredith has made an order for the winding up of the North Dome Company, on the application of the Timiskaming Mining Company, which is a creditor to the extent of some $85,000.

San Antonio Land and Irrigation Company.—The English bondholders of the San Antonio Land and Irrigation Company have appointed a committee of two to represent them at the general meeting which was held at Toronto on July 21.

Duluth Superior Traction Company.—The weekly statement of the Duluth Superior Traction Company shows the earnings for the first week in July to be $29,860, which is an increase of $697 over the same week last year. Earnings for the year to date are $656,025, against $615,687 a year ago.

Nipissing Mines.—The estimated net production from the Nipissing mine for the month of June was $18[illegible], as compared with $211,250 in May.

During the month of June the company mined ore of an estimated net value of $183,558 and shipped bullion from Nipissing and custom ore of an estimated net value of $360,486.

Nova Scotia Car Works, Limited.—The latest dividend to be passed by an industrial corporation is that on the preferred stock of the Nova Scotia Car Works, Limited, of Halifax. The directors met and decided that the dividend not having been earned, it should not be declared.

The reason for the non-earning of the dividend is simply that no orders for cars have been received. Nothing has been done since the early spring, when 180 cars were finished, and prior to that there was a long period of idleness.

La Rose Consolidated Mines Company.—The La Rose Company's statement, that the cash surplus on July 1st last was $1,435,002, and ore in transit and at smelters, etc., was valued at $112,418, making a total of $1,547,420. From this there is to be deducted the quarterly dividend, amounting to $187,500, which would leave $1,359,920 as the net current surplus.

On December 31st last the net current surplus was $1,528,776, this surplus being arrived at after deducting the dividend and bonus declared for the last quarter of the year, as well as accounts payable and accrued expenses.

Atlantic Sugar Refineries Company.—A special meeting of the shareholders of Atlantic Sugar Refineries Company has been called for July 27th, to consider resolutions for an increase of $500,000 to $2,000,000 in the authorized bond issue, and a reduction in the common stock from $[illegible] to $3,500,000.

The authorized bond issue is presently $1,5[illegible], of which $1,250,000 have been sold, $250,000 remaining in the treasury for additional working capital and the $500,000 balance will be held against plant extensions, bonds to be issued only to the extent of 50 per cent. of the expenditure made or to be made by the company.

The preferred stock capital will remain unchanged at $3,000,000 of which $2,500,000 has been issued.

Mond Nickel Company.—Sir Alfred Mond, wh[illegible]ing at the annual meeting of the Mond Nickel Company, stated that the Lorne Power Company had been formed for the purpose of developing water powers in Canada to provide for the increase of power which the extension to their mines and smelting plant demanded.

The president stated that the directors had every [illegible] to believe that the company's [illegible]

The company spent last year £14[illegible] [illegible] Canada, additional [illegible] had been [illegible] $[illegible],000 of [illegible]

Trethewey Silver Cobalt Mine, Limited.—Consulting Engineer [illegible] report [illegible] developed and [illegible] during the half-year has been [illegible] at June 30th being [illegible] tons, which compares with [illegible] tons, the total positive ore at December [illegible]. The total silver in shipments for the half-year amounted to 2[illegible]7,14[illegible] ounces. The production for the half-year was [illegible]87 ounces of silver. Exploration work on the West Beaver Mine did not give sufficiently encouraging results to warrant continuing operations and on May 20th all work was stopped and the option dropped.

On April 29th, working options were secured for [illegible] months on mining properties, situated near the Casey Cobalt Mine in Harris Township, consisting of 40 acres and 8[illegible] acres respectively. The cost to the company of these options is $100 per month, and in the event of the options being exercised the purchase prices will be $[illegible],500 and $[illegible] respectively. Diamond drill work has been started on the properties to explore for silver veins.

The Trethewey Mine [illegible] 17,354 tons of ore of an average grade of 20[illegible] ounces per ton were milled during the half year. Still further reductions have been made in the unit costs of operations at the mine, and the property as a whole is in excellent physical condition.

The company's finances at June 30th show:

Cash in banks and [illegible]	$[illegible]

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Sydney, N.S.—Electors recently voted on by-laws amounting to $131,000.

Medicine Hat, Alta.—Ratepayers will vote on by-laws amounting to $221,000 on July 23rd.

Irvine, Alta.—Ratepayers will vote on August 4th on two by-laws to borrow $3,000 for sidewalks and improvements.

Strathroy, Ont.—Tenders will be received up to July 25 for $25,000 5 per cent. 30-year debentures. F. W. Atkinson, clerk.

Brighton, Ont.—Tenders will be received up to August 1st for $48,000 5 per cent. 30-year debentures. A. Mark, town clerk.

Lethbridge, Alta.—Ratepayers are to vote on a by-law to provide for completion of municipal works and for purchase of lands on August 4th.

Edmonton, Alta.—The Edmonton city council, at a special meeting, decided to make an issue of six months' treasury notes for four million dollars at 4½ per cent. interest.

Virden, Man.—Tenders will be received up to August 7th for $17,000 5 per cent. 20 instalment debentures. W. Whiteford, secretary-treasurer. (Official advertisement appears on another page).

Neepawa, Man.—Tenders will be received up to August 27th for $7,500 6 per cent. 30-year debentures. J. W. Bradley, secretary-treasurer. (Official advertisement appears on another page).

Montreal R. Catholic Schools.—The school board refused all tenders for $500,000 4½ per cent. 40-year debentures and authorized a loan of $200,000 from the Provincial Bank and the Bank of Hochelaga.

Wallace R. M., Man.—Tenders will be received up to August 7th for $2,000 5 per cent. 20-year telephone debentures. W. Whiteford, Clerk, Virden. (Official advertisement appears on another page).

Montreal Protestant Schools.—No tenders are received for the Protestant schools debentures. The board recently accepted an offer of 95.278 for half of a million dollar issue on which it had called tenders, and gave an option to the purchasing firm on the balance at the same price, which was not taken up.

St. Lambert, Que.—A recent issue of $480,000 5½ per cent. 40-year debentures of St. Lambert were awarded Messrs. Hansom Brothers, who are offering same to investors. The town's financial statement shows that assessed value of taxable real estate is estimated for 1914 at $5.500.000, the general debenture debt is $543,312 less waterworks debentures $63,582, and electric light debentures $82,417, and the local improvement debenture is $35,043.

Regina, Sask.—The council have debentures to sell, but require a better price than was contained in two recent offers. Finance Commissioner Pool stated that it was possible for the city to go until the middle of August. After that the city still had another $1,000,000 of treasury bills to issue which had already been authorized by the city council.

Ratepayers are voting on a grant of $3,000 to the Order of Grey Nuns on August 10th.

Alberta.—The following school districts have been authorized to borrow money:—

Grouard R.C. No. 22, $1,200, Y. K. Floc'h, Grouard; Lac Ste. Anne Catholic, No. 29, $2,500, C. Williams, Lac Ste. Anne; Pincher Creek, No. 121, $3,000, W. A. Ross, Pincher Creek; Glory Hills, No. 400, $1,200, J. A. Willie, Stony Plain; Colchester, No. 45[illegible], $1,500, W. Harke, West Salisbury; Patricia, No. 749, $600, A. J. Trounson, North Edmonton. Irvine, No. 892, $3,000, F. G. McLaughlin, Irvine; Kia Ora, No. 1241, $1,500, S. D. Ludlow, Acme; Chesterville, No. 2842, $1,[illegible], Mrs. E. J. Hutchinson, Lafond; Flat Creek, No. 3106, $8[illegible], Julien J. Leblanc, Edmonton.

Regina, Sask.—The following is a list of debenture applications granted by the Saskatchewan local government board and the applying treasurers:

School Districts.—Quimper, No. 3254, $2,000. W. R. McKenzie, Quimper. Westview, No. 256, $2,500. W. H. Brown, Westview. Fairlight, No. 3211, $2,000. E. O. Hillier, Eastleigh. Hexagon, No. 3256, $2,000. Jas. Campbell, Bengough. Glen Curren, No. 3257, $2,000. Clarence G. Graham, Gladmar. Ivor, No. 2297, $2,000. David Haller, Elrose. Danbury, No. 3274, $2,000. J. H. Morris, Danbury.

Rural Telephone Companies.—Froude, $4,000. Robt. E. Coleman, Froude. Hillcrest, $2,600. J. F. Johnston, Bladworth. Findlater, $4,800. E. J. Topping, Findlater. Landon, $5,700. Jno. Keating, Lampman. Hume, $4,000. R. E. Juby, Hume. Regal, $5,800. E. J. Brown, Swift Current. Eastmount, $8,000. V. Gwatkin, Earl Grey. Dalrymple, $4,200. Jno. Donald, Cupar. Crescent, $3,000. E. E. Johnston, Rouleau.

Rural Municipalities.—Grayson, No. 184, $4,000. C. E. Eymann, Grayson.

Village.—Dinsmore, $2,900. Hugh C. Rankin, Dinsmore.

Town.—Oxbow, $16,000. S. R. Wallis, Oxbow.

◆

FORTY TIMES OVERSUBSCRIBED

Result of French Loan Was Partly Due to Stage Management of Banks

After hearing of 70, 80 and 90 per cent. of various loans going to underwriters in London, the news of the subscription, in Paris, 40 times over of the recent French loan, arouses curiosity. The loan was one of 800,000,000 francs or about $160,000,000. The over-subscription so many times was to some extent, a piece of stage management on the part of the banks. As one critic points out:—"Forty times 800,000,000 francs would work out at 32,000,000,000 francs, or about $6,400,000,000. The enormous hidden wealth of the French peasantry is proverbial, but it may be doubted if the whole of France could supply the means to subscribe the new loan 40 times over. Even if 10 per cent. of the total $6,400,000,000 were actually subscribed and cleared through the banks it would cause an entire suspension of business."

Created for the Occasion.

Commenting on the loan somewhat in similar strain, just before the issue was made, the financial expert of the Paris Debats, said:—

"One must guard against allowing the imagination to be blinded by the figures of over-subscription. If, for instance, the loan were to be covered 30 times, the public will say: The government's first requisition was for 90 million francs, and the public has offered 2,700 millions. Later on, the state asked for 800 millions, and 24,000 millions was offered to it. People will draw the conclusion that there must now remain in France 23 thousand millions of francs of ready capital looking for employment.

"But it is not necessary to be very familiar with the mechanism of great loan issues to know that the larger part of the funds thus tendered by subscribers represents capital collected, if not indeed created, purely for the occasion. These masses of capital will disperse again the moment the allotment has been made; they can be kept together only for a day or two. The reason for this particular sort of oversubscription is that subscribers are well aware of the fact that their individual applications will have to be heavily scaled down in the allotment; they have, therefore, correspondingly increased their original bid.

"It may, in fact, be suggested that if the subscribers were to receive in allotment all that they had applied for, they would be very awkwardly embarrassed. One must, then, take the figures of over-subscription for what they are worth, and for no more. But that does not mean that the significance of so large an over-subscription is not very great."

What Result Means.

Making allowance for artificial support to the loan by bankers interested in the subsequent flotation or promotion of a variety of other loans, and so on, there can be little question as to the genuineness of a large over-subscription to the national loan. The result shows what a large reserve power is given to a country by its thrifty people. It should also help to restore confidence in the general financial situation.

HALIFAX AND THE CONVENTION

Peter Lynch, a prominent barrister of Halifax, some thirty years ago told the historical society of Nova Scotia what a gay town Halifax was in 1825. It was remarkable, he said, "for the hospitality of its people and the beauty of its girls." Conservative prophets state that of these two attributes, the life insurance men of Canada will have full appreciation before July gives way to August.

◆

The latest flying feat is the Huertaplane.

This boxing craze in London does not interest Canada, except, perhaps, the one blow we get so often, the underwriters' left.

TOO LATE FOR LIFE INSURANCE

Every agent knows of numerous cases where continual delay in applying for life insurance has had disastrous effects. Every policyholder has heard of such instances. More important, every man who carries insufficient life insurance, and, worse still, none at all, knows of the dangers of delay. Yet men are continually putting off life insurance until some future time. A prominent New York company last year declined 7,228 applications for $23,350,354 insurance, and that notwithstanding the scientific handling of sub-standard risks by which many slightly impaired lives are granted insurance of some sort. It is probable that a large proportion of the men declined were solicited at a time when they were in good health and could have obtained insurance, but they decided to insure later. Imagine the feelings of those 7,228 men when they were told that they were too late to obtain the life insurance protection that they needed and should [illegible]

RELIGION AND LIFE INSURANCE

The insurance companies in Canada frequently meet people who refuse to buy a policy on account of religious objections. A Montreal agent told *The Monetary Times* that he interviewed those kind of prospective policyholders only once, preferring not to argue with them. The question was propounded to the Rev. Professor David Smith, D.D., recently. It was put to him in this form:

"A friend of mine, a young, unmarried man, has two policies of insurance on his life, one almost paid up. He thinks life insurance implies a distrust of Providence, and has such strong views on this that he has taken steps to surrender the policies. To do this, he says, is against his reason and inclination, but is necessary to his peace of conscience. He believes Providence is directly influencing him to this course. Do you think that Providence directly influences men in matters like this? What would you suggest?"

In replying to the question, Professor Smith said: "There are two mistakes which we must equally avoid. One is fretting about troubles which we can do nothing to avert. The other is doing nothing when we might do something and casting the responsibility on Providence. This may seem very pious, but it is really just the reverse. Now see how this applies to the question of insurance. If a man, despite his utmost industry, can earn no more than suffices for immediate necessities, then he is entitled to leave the future to Providence; but if he can, he is bound to make provision for his own maintenance when he is past work, and for the comfort of his helpless dependants in the event of his death; and so long as he has made no such provision, he is guilty of dishonesty and selfishness every time he spends a shilling which he might save.

"There are three, and only three, possible methods of getting a livelihood: industry, charity, theft; and it is the ambition of every honest and self-respecting man to bear his own burden, and owe no man anything. Insurance is one of the means of achieving this. It is simply a kind of investment, and, if it be wrong, then it is wrong to make any sort of provision for the future. See how it works out. If a man will make no provision, of course he must not marry and risk leaving his wife and family on the world. But what of himself? Misfortune comes, loss of health or of work, and then his only resource is charity. By-and-by he will be too old for work, and then he will claim a pension. In either case the burden which he might and should have borne himself will fall on his neighbors. Of course, it is the office [illegible] to succour the destitute, but it is the duty of every man to bear his own burden if he can.

[illegible] Begin as [illegible] and end as a crank."

SOME IMPORTANT APPRAISALS

It was recently proposed by Mayor Michaud, of Maisonneuve, in connection with the city's financing operations, that the Canadian Appraisal Company should be asked to appraise all the city's buildings and property so that the present value, whatever it is, shall have the seal of a reliable authority, independent of the city and its officials, and one which will be accepted in the money markets of the world as trustworthy. This proposal, which was accepted by the council, was the outcome of a discussion concerning the actual valuation of the property of the city. According to the books, the assets and liabilities approximately balanced, but the mayor and other officials think that a proper valuation will show that the city has a balance of about $4,000,000 on the favorable side. Such an appraisal is an excellent undertaking, and other enterprises in financial doubt might follow Maisonneuve's lead.

The Canadian Appraisal Company was also called in recently in connection with a valuation to be made of the Algoma Steel Corporation at Sault Ste. Marie. This appraisal is, no doubt, being made for the purpose of establishing definite values for various purposes, among these being insurance, it being possible to make a saving of a considerable extent through knowing values which are necessary to insure. Besides, there is the advantage of definite knowledge concerning assets.

Another recent appraisal of importance made is that of the Tagona Water and Light Company, the American Appraisal Company, an affiliation of the Canadian Company being called in to determine what the city [illegible] Ste Marie should pay the Tagona Company for its electric and water franchises.

NEW BRUNSWICK CHARGES

There have been so many political scandal incidents in Canada of late, that the average man has ceased to follow the details. He tries only to learn who were the victims, what were the spoils, who got caught, and what were their politics. Tabulating even that information takes time, as so many unpleasant political intrigues are bobbing up. We have not followed closely the New Brunswick charges, but there seems to be little question that at least a statement of some kind is due from Premier Flemming.

THE HINDU IN BRITISH COLUMBIA

Whatever view one takes of the Hindu trouble in British Columbia, there is little room for doubt that the Hindus have not helped to smooth matters. They have rubbed British Columbia's fur the wrong way. Like all other fur, rubbed under such circumstances, it will fly. There are international ethics and honor and brotherly love, and numerous other factors in the problem, but the one prominent fact is that British Columbia does not want the Hindu. Whether or not the Hindu has moral and legal rights to enter and remain in the Pacific Coast province, it is certain that his stay there will be as comfortable as that of a snowball trying to live at ninety in the shade.

* * *

After all, even in the shade it is not too hot for H. Pollman Evans and J. W. Moyes, wherever they are.

SELLING LIFE INSURANCE

Most life insurance agents are willing to learn how to sell more life insurance. They are critical recipients of the advice, however. That is natural, as probably there are not two prospects upon whom the same method of salesmanship will work. Every man needs to be approached in a different way, and what appeal as strong arguments to one, will appear weak to another. A perusal of the ninety-one schemes and plans proved in the field by forty-four insurance salesmen, issued in book form by the System Company, shows this to be true. Mr. G. W. Gundaker, of the Mutual Life of New York, correctly says that selling insurance is entirely different from selling merchandise. One cannot place the commodity before the purchaser and let its qualities of color or texture make their own silent appeal. It is not like inducing him to slip on the season's newest overcoat and step before the glass. Insurance does not appeal to the eye; it appeals to the reason. The descriptive powers of the salesman alone depict the merits of the proposition and analyze its benefits. The prospective buyer is influenced favorably or unfavorably almost entirely by that description and analysis.

On the salesman's own ability, then, will depend getting the prospect into a receptive frame of mind. Most insurance men make it an absolute rule never to ask a man if he wants insurance. Such a question gives an opening for the direct answer, "No," and creates a definite atmosphere of opposition which the agent must overcome. A much better way is to introduce the subject by asking a few questions or making a few statements which will indirectly arouse the prospect's interest and start him to think seriously of his own need for insurance.

Presenting the insurance proposition to the prospect involves three definite steps. These are explained by Mr. John J. Collins, of the Prudential Life Insurance Company of Newark in this way: "First, a clear exposition, when necessary, of insurance itself, its advantages and benefits; second, a demonstration of a particular policy, chosen as being best suited to the prospect's needs; and, third, a presentation of the details of costs and benefits in such a way as to create immediately a favorable impression in the prospect's mind. The first two steps are largely matters of clarity in exposition; the last requires tact, ingenuity, cleverness, in fact, all the elements of salesmanship."

The method of approach is one of the ticklish points in selling life insurance. Here, again, one cannot formulate hard-and-fast rules. In the interesting demonstration (given at a meeting of the Toronto Life Underwriters' Association not long ago) of an agent trying to interest a prospect, the main criticism of many of those who witnessed the demonstration, was that the method of approach was unsuitable for the prospect. One of the first things the canvasser did was to ask the prospect, representing a business man, to change chairs with the canvasser. This was done to arouse the prospect's curiosity, but, as some critics remarked, it might arouse his anger.

Mr. Alfred Clover, an insurance salesman, in discussing preparation for the approach, says that it is far better in the long run to spend weeks and months if necessary in determining a stiff prospect's point of contact than to take chances of spoiling him for all time by going after him "catch-as-catch-can."

Most books and hints on selling life insurance are valuable to the salesman, but the knowledge needs diplomatic application.

PSYCHOLOGY OF INVESTMENT

On Too Much Confidence and the Sanctity of Print

BY STEPHEN HUTCHINGS.

(Concluded.)

Those rare old German medievalists [illegible] printing press, for which Caxton gets [illegible] little dreamt, I trow, as they tinkered at their [illegible] what mighty consequences hung upon their work. [illegible] rudely-carved letters marked an epoch and gave to civilization its most potent agent, such as we moderns might pause to contemplate with wonder and not a little reverence. But we do not, and the more cultured we are the less we seem to care, the bulk of newspaper men being the least mindful of the high purpose of the press and the character of the display in its columns.

What Print Conveys.

In the eyes of certain sections of the community, print conveys a peculiar sense of truth and sanctifies the subject matter. I have known persons avid of mere advertisements not for their literary charm, which is conspicuously absent, but, I suspect, for that personal note to which things that should be rigidly private are adverted. I refer to advertisements of patent medicines.

Did one of the sufferers appear in the flesh and detail the cure of an ulcer, these morbid readers would likely shut their ears to the business and tell him to "go to [illegible]," in the manner of the Elizabethans. Even if they found the story credible, they would deem the subject far from delectable, yet they take an interest in other total strangers in remote parts of the country, whose thankful letters the Patent Cure advertiser sets forth as testamentary evidence of his infallible medicine.

They have a strong bias to the printed word which they accept as resolutely as they accept the Bible, and they are ready to swallow any pill or potion apparently for [illegible] other reason than that its merits are talked of in type, and [illegible] cook at Hamilton or Halifax, who had a tumour, writes that she is mercifully cured by Billikin's Brown Ointment and able to resume her duties more blithe than ever. So the quack flourishes because these pusillanimous souls prefer to nurse themselves on syrups and squills in 50 cent bottles, to going to a qualified doctor. Perhaps it is that the doctor might frighten them by telling them too much?

Weak as Monomaniacs.

We get an equivalent to this in finance, with the possible difference that financial home-curers may [illegible] practitioner when they notice the least bad [illegible] physical entities. But in financial matters they [illegible] as the monomaniacs I have mentioned.

They mess and fiddle with every kind of [illegible] or mend their fortunes, and are [illegible] it. They try everything: perhaps it is a brilliant [illegible] of their own, perhaps their broker suggests [illegible] perhaps they follow the advice of [illegible] them in the guise of financial [illegible] turn, the most fatal of all.

Simpleton's Money Bags.

The application of these [illegible] instant stays the deliquescence which [illegible] Simpleton's money bags. His capital [illegible] by the wasting disease [illegible] for himself, he sits into the [illegible] ful, waiting for the [illegible] grows with fairy magic [illegible] ing like a factory chimney [illegible] and worse until it clatters [illegible] and missiles, laying him and [illegible]

That is the tragedy. It [illegible] Simpleton deserves his fate [illegible] tune was not built directly [illegible] gers. Yet he hazards the [illegible] counsel, gentlemen with axes [illegible]

There is something [illegible] due to external influences [illegible]

[illegible]

Investment as an Art.

[illegible]

[illegible]

[illegible]

Too Much for Granted.

[illegible]

[illegible]

Excuse for an Old Lady.

[illegible]

CANADIAN LOANS REVIEWED

Comments on Recent Issues Overseas—Water Board Loan

Canadian issues of various kinds keep the London market busy in comment. Regarding the issue of £400,000 Greater Winnipeg Water District 4½ per cent. stock at 95, the London Statist says it "may be regarded as a satisfactory Canadian public utility investment," while the Economist says:—"The security of a Canadian water district is new to London, and the prospectus is not at all definite as to the responsibility for the loan of the municipalities included in it. If, however, it is an unconditional charge on the rateable value of the area, its security should be satisfactory." This issue of stock forms part of a total authorized issue of £2,773,972. The underwriters took 97 per cent. of the recent loan.

South Vancouver Loan.

The issue in London of £223,000 5 per cent. consolidated stock, made by the municipality of South Vancouver at 91 per cent., was thought at the price to be distinctly attractive, the existing 5 per cent. consolidated stock of the city being quoted at 92.96. South Vancouver is practically a suburb of Vancouver proper. The London Financial Times, commenting on the loan, said:—"It might have been as well if the income and expenditure of the city had been stated, but in any case there can be little question as to the security for the loan, and as South Vancouver is already in close connection with the main city, and will, not improbably, be merged therein before long, there is the prospect that the securities of the two towns will be consolidated, which would increase their marketability."

Mr. E. V. Portway, of Montreal, secretary of the Premier Glass Company of Canada, referring to the fact that subscriptions to the issue of £180,000 7 per cent. preferred shares recently offered to the public had been returned by the company's bankers, the Commercial Bank of Scotland, has made the following statement:—

"The public issue made on this side was not so well received as we hoped owing to market conditions, and the subscriptions have been returned. Meantime, satisfactory arrangements have been made on the other side, and the completion of the plant is now being proceeded with, and operations will begin in about two months. Capital has also been raised privately over here."

The response to their offer in London of £1,000,000 Quebec province 4½ per cents. at par was poor, the underwriters having to take up 83½ per cent.

Tobacco Company's Loan.

The Imperial Tobacco Company of Canada made a London loan this month. This company was registered in Canada in 1908, and has virtually constituted a branch of the British American Tobacco Company. A recasting of the capital appears to have been effected in 1912, and the present issued capital is given as £1,650,000 in 6 per cent. £1 cumulative preference shares and $27,002,500 ordinary shares of $5 each, part of an authorized $30,000,000. There are no debentures or bonds. The public, by prospectus, were offered 500,000 ordinary shares of $5 each at the price of 19s. per share, two leading banking companies authorized by the International Financial Society, Limited, acting on behalf of the contractor for the purchase of the shares. The financial year of the company ends September 30, and for the 1913 period profits of the company are stated as £48[illegible]. For that period quarterly dividends aggregating 6½ per cent. were paid on the ordinary shares. At the issue price of 19s. per $5 share the continuance of 6½ per cent. dividends would give the investor a yield of about 7 per cent. The preference shares are quoted on the London Stock Exchange, and quotations are to be applied for in respect of the shares now offered for sale. "The cautious investor," comments the London Statist, "of course, will be well advised to purchase the preference shares, but the investor of more speculative [illegible] the attraction of a higher yield with the possibility [illegible] it is to be recollected the possibilities are [illegible]."

[illegible] the London Financial Times [illegible] public of big blocks of shares [illegible] of the companies themselves, but by some unknown vendor, have been increasingly frequent of late, and the practice has the disadvantage of leaving in doubt the reasons for the sale, and whether any special circumstances have arisen in connection with the undertaking itself to induce big interests to part with their holdings. . . . The company is in many respects a strong one, but, in view of the large figure at which the goodwill is taken, the ordinary shares can only be described as a decidedly speculative investment."

RAILWAYS IN BRITISH COLUMBIA

Lines East, West, North and South—Vancouver Island's Share—New Industries

(Staff Correspondence).

Vancouver, July 18th.

Now that the country is being covered with east and west railways, the talk is of lines north and south. British Columbia has a north and south line, but this is in the lower part of the province, and its chief mission has been to convey the trade of the interior to cities across the boundary line. When the Pacific Great Eastern was first spoken of, the plan then was to extend this line into the Peace River. The Canadian Northern will give this province a route north from Kamloops, and the Pacific Great Eastern north from Howe Sound to Fort George. Of recent times, too, there has been talk of the line to connect with the Yukon. This was first brought to the attention of the public at the time the Klondike was discovered, but when the bill was killed, nothing further was done. The provincial government has declared its willingness to do all in its power to build a line north through provincial territory to connect with the Alaska line, for which money was recently voted at Washington.

On Vancouver Island.

On Vancouver Island, the farthest run of a railway would be only about a day's run from Victoria, and the settled portion is much less than that. There are great timbered areas and fine valleys and settlers are always close to well-sized centres. The Canadian Pacific Railway has been extended from Nanaimo to Courtenay, one of the nicest districts that can be found in Canada. Steel has reached there, and grading will be rushed through as soon as possible. West and north from Victoria the Canadian Northern Railway will open a new section. The marketing of timber will furnish traffic from the start. Small holdings are a feature of the well-settled districts on Vancouver Island, and with transportation extended these will become numerous in all parts.

New Industries Starting.

The Royal Crown Soaps, Limited, the control of which, it is understood, is held by the big English firm of Lever Brothers, of Port Sunlight, is advertising for tenders for the construction of a new plant on Burrard Inlet in Burnaby, east of Vancouver. The front part of the new soap factory will be eight stories in height, while the back will be three stories. It will be of reinforced concrete, and will have all modern facilities. In addition to the factory buildings will be a reinforced concrete wharf, 125 feet in width.

The British Columbia Steel Works, with a capitalization of $500,000, has been organized with the following Vancouver men as directors: Mr. Francis L. Leighton, general manager of the Vancouver Engineering Works; Mr. J. J. Banfield, Mr. Nicholas Thompson, Mr. David A. Smith, Mr. George E. Graham, with Mr. A. M. Valentin as secretary-treasurer. The site of operations will be at Bridgeport, Lulu Island, where various iron products will be manufactured.

◆

Mayor Brown, of Medicine Hat, Alta., recently appointed a municipal mixed farming commission to meet the farmers' organizations. The members of the commission are Mr. John Benson, who homesteaded in the west many years ago; Mr. George Brown, manager of the Medicine Hat demonstration farm; Mr. A. J. Matthews, president of the Medicine Hat Agricultural Society; Mr. N. L. Chudleigh, vice-president of the board of trade; and Mr. W. B. Willcox, secretary of the same organization.

NEW INCORPORATIONS

Seventy-two New Companies—Motor Bus Company at Toronto

Canada's new companies recently incorporated number 72. The head offices of these companies are located in seven provinces. The total capitalization amounts to $8,487,000, the largest company being:—

Segur, Mackay, Segur Oils, Limited, Montreal . . . $1,000,000

Grouping these new concerns according to provinces in which the head offices are situated, we have the following results:—

Province.	No. of companies.	Capitalization.
Nova Scotia	1	$ 150,000
Prince Edward Island	2	332,000
Quebec	8	1,645,000
Ontario	17	1,540,000
Saskatchewan	14	2,300,000
Manitoba	7	840,000
Alberta	23	1,680,000
	72	$8,487,000

The following is a list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The persons named are provisional directors:—

Lethbridge, Alta.—The King's Hotel Company, Limited, $100,000.

Torquay, Sask.—The Torquay Farmers' Grain Company, Limited, $10,000.

Prince Albert, Sask.—The Sandstone Brick Company, Limited, $50,000.

Watrous, Sask.—The T. N. B. Manufacturing Company, Limited, $25,000.

Swift Current, Sask.—The River Oil and Gas Company, Limited, $500,000.

Grouard, Alta.—The Northern Alberta Steamship Company, Limited, $20,000.

Fort McMurray, Alta.—The Fort McMurray Mercantile Company, Limited, $10,000.

Rydal Bank, Ont.—Rose Mutual Telephone Club. T. Inch, J. Keast, S. T. Maguire.

Windsor, Ont.—All Red Feature Company, Limited, $50,000. F. H. Lawrence, W. D. Brock, A. R. Bartlet.

Amherst, N.S.—Ledcote Company of Canada, Limited, $150,000. C. J. Siliker, H. A. Purdy, F. L. Milner.

Stratford, Ont.—Stratford Davenport Company, Limited, $25,000. E. W. Forsberg, A. A. Leipold, J. P. Reder.

Kincardine, Ont.—The William Mitchell Company, Limited, $25,000. W. Mitchell, G. K. Lampman, A. Mitchell.

Kingston, Ont.—Reliance Moulding Company, Limited, $100,000. F. R. Phillips, W. H. Martin, S. C. Spangenberg.

Brantford, Ont.—E. B. Crompton and Company, Limited, $150,000. E. B. Crompton, C. F. Ramsay, H. J. Mills.

Port Erie, Ont.—International Safe and Register Company, Limited, $100,000. G. M. Kellogg, A. C. M[illegible], A. D. Nie.

New Carlisle, Que.—The International Fre[illegible] Pulp Wood Company, Limited, $50,000. J. S. G[illegible], J. B. S. Mitchell, E. S. Scott.

Moose Jaw, Sask.—The Southern Saskatchewan Oil and Gas Company, Specially Limited, $[illegible]. Moose Jaw Abattoirs, Limited, $150,000.

Regina, Sask.—International [illegible] Company of Canada, Limited, $[illegible]. Prairie [illegible] Company, Limited, $100,000. Capital [illegible] Company, Limited, $50,000.

Prince Edward Island.—Prince [illegible] Silver Black Fox Company, Limited, $300,000. J. A. [illegible], J. [illegible], E. Arsenault. Magnet Fur Company, [illegible]. H. Beer, A. M. Matheson, C. L[illegible].

IMPERIAL BANK OF CANADA

DIVIDEND No. 96.

Notice is hereby given that a Dividend at the rate of Twelve Per Cent. (12%) per annum upon the paid-up Capital Stock of this institution has been declared for the three months ending 31st July, 1914, and that the same will be payable at the Head Office and Branches on and after Saturday, the 1st day of August next. The Transfer Books will be closed from the 17th to the 31st July, 1914, both days inclusive.

By order of the Board.

D. R. WILKIE,
General Manager.

Toronto, 24th June, 1914.

NOVA SCOTIA
A Character Sketch

A man there is in Canada [illegible] of resentment because [illegible] ager, in his stockinged feet, [illegible] had a thirst for statistics, and th[illegible] satisfy it. He always says now [illegible] Nova Scotia. He included even New Brunswick [illegible] Prince Edward Island. But there are factors in favor of the bank manager, Nova Scotia and the maritime provinces generally, even if one has extreme respect for boots. Nova Scotia has a reputation for being able to do business in shoes or out of them. That fact sometimes gets ahead of those who insist on white cuffs, a Prince Albert coat and a plug hat. The maritime provinces are not as formal as Ontario. They are not as noisy in optimism as the prairie provinces. They are not as mountainous in their enthusiasm as British Columbia. Indeed, Nova Scotia and her sister provinces have almost a corner on Canadian modesty. Modesty apparently having declined in value as a commercial asset, the maritime people may have lost a little business. When we remarked in these columns recently the quiet persistence of the people of the Canadian Atlantic coast, and the appreciation of the British money markets of their conservative methods, expressing the hope that we should hear their voice more frequently and above a whisper, the modest and typical reply came from Halifax: "We are just clearing our throats."

Nova Scotia has had to adapt itself to some remarkable changes. In the days of wooden shipbuilding it was preeminent. Steel vessels displacing the old style ships, Nova Scotia has since gone in for the steel industry, lumbering and coal mining. Its agriculture and fisheries are two other important industries and sources of wealth. When the wooden shipbuilding industry was blotted out, it made the workers feel as western Canadians might feel if wheat-growing went out of fashion because rice had become diet in place of bread. But Nova Scotia proved its adaptability then, as it has proved it since. During the next fifteen years it will show the possession of that asset a great deal more.

Nova Scotia has become a manufacturing country of no mean importance. At one time chiefly farming and fishing buttered its bread. To-day, the province has 1,480 manufacturing establishments paying $11,000,000 yearly to 28,000 employees. Here is how the manufacturers of Nova Scotia sum up the prospects and the industrial ascendency of the province:—

"It is broad-based," they say, "upon its immense deposits of coal, its great forests, its farms, its fisheries, its water-powers, and its strategic commercial situation at the gateway of Canada. Its position on the ocean highway enables its manufacturers to assemble raw materials with conspicuous advantage and bring the world's great markets within easy reach. The climate, softened by the surrounding sea, is suitable alike to animal and vegetable life. The laws are British and are wisely administered; the work people are skilled and intelligent, and religious freedom is absolute.

"By reason of these numerous and powerful advantages it is the belief of all who have knowledge of the resources of this province that Nova Scotia is destined to be one of the great workshops of the Dominion."

Premier G. H. Murray, who has the greatest faith in his province, pointed out in *The Monetary Times* [illegible] early this year that there was much less decline in [illegible] Nova Scotia than in the western and central provinces [illegible] the recent period of stringency. Moreover, the [illegible] cations are promising. The recent changes in the [illegible] States tariff will materially assist in the development [illegible] province. It is believed that th[illegible] United States is one of the best [illegible] the Nova Scotia fishing industry since the [illegible] Reciprocity Treaty. "Our fishermen," [illegible] Mr. Murray, "will reap the benefit of fully half [illegible] practically all the duty that has [illegible] for our agricultural products and for [illegible] been stimulated, and a large business [illegible] is confidently expected."

These predictions are being [illegible] Nova Scotia [illegible] only making excellent history [illegible] sending also some of its best [illegible] There they are helping with the [illegible] prairie provinces.

WOMEN AND LIFE INSURANCE

Mortality of Married Men and Women Compared—Suicide Record of Married and Unmarried Women Policyholders

Mr. George H. Beaudry, a prominent Pacific coast life man, is responsible for the following deductions, which he says were derived from the statistics of the large American life insurance companies. He says the records indicate that slender women are better risks than stout women and that single women live longer than the married.

Mr. Beaudry asserts:—"A woman who is thirty pounds under weight is an 18 per cent. better risk than a woman who is thirty pounds overweight. The mortality among women who are thirty pounds underweight is 94 per cent. and among those overweight the mortality is 112 per cent.

Spinsters are Long Lived.

"The spinster's chances for long life are 50 per cent. better than those of her married sister. Out of 149,000 single women insuring the mortality rate was only 81 per cent., while among the women insuring with their husbands as beneficiaries the percentage was 126 per cent. The married woman has not even chances with the married man, at least in the first few years of married life. The percentage among the men increases with age. For the first two years of insurance women have a high mortality rate, whether they be married or single, and this fact the companies attribute to a premonition which women are declared to possess. The insurance people call this instinct and they say women feel possibilities of death so keenly that often the companies lose during the first two years of policy holding.

Suicides of Insured Women.

"Of all the policies issued by life companies 2 per cent. of the holders suicide. Death from self-inflicted causes among spinsters total only six-tenths of 1 per cent., while among married women the percentage is less than one-tenth higher. The companies make a distinction, however, among the married women. Between the happily married class or women whose insurance is drawn in favor of their husbands, and the single women there is almost no difference.

"The women whose beneficiaries are people other than their husbands show 1 and one-tenth per cent., while among the widows and divorced women the percentage from suicide climbs to 1.7."

◆

PREMIER MURRAY AND NOVA SCOTIAN OPTIMISM

"While you will not find the same spirit of optimism in this province that you will find in the West," says Premier Murray of Nova Scotia, " it can be truthfully said that we have made splendid progress, and our industrial advancement has been of a character which would justify us in being proud of our position. We have a happy and contented people. Our great strength lies in our varied industrial life. Along our seaboard we have our great fishing industry, in which there is engaged a fleet and a fishing population unequalled in the world.

"In our western counties we have our great fruit belt which we think, and I feel justly so, can produce apples unexcelled anywhere. In the East we have our great coal and steel industries, which have reached a degree of progress which has been not only the wonder of Canada, but also of other nations. Splendid advancement has been made in our agricultural resources, and you will find that in manufacturing we are fast taking a place which indicates that Nova Scotians are not behind the other provinces in this respect.

"In almost every town in Nova Scotia to-day manufacturing is carried on successfully, so it is little wonder, if you will permit me to say so, that the ordinary Nova Scotian, when he visits the other provinces or goes abroad to other parts of the world, feels a bit proud of his native province, and he thinks (and I think he has some justification for his belief) that, take it all in all, we do not suffer by comparison with any other country. However, I realize that much can be said for every part of Canada, yet I always felt it my duty to encourage Nova Scotians to take pride in their own province, for once a man takes a just pride in his own province, he begets a patriotism that makes him a better Canadian and a better citizen."

THE DOMINION BANK

Sir Edmund B. Osler, M.P., President. W. D Matthews Vice-President
C. A. BOGERT, GEN. MANAGER.

Collections, All Over The World

Whether your business is confined to Canada—or you ship goods to all parts of the world—you will appreciate the facilities of the Dominion Bank in making collections.

The Branch in London, England, is in immediate touch with the European financial centres—while correspondents throughout the world expedite all transactions.

The Dominion Bank has branches in all sections of Canada. Manufacturers, Wholesalers and Shippers are requested to write the Head Office for a complete list of Branches and correspondents.

THE Bank, having over 310 Branches in Canada extending from Halifax to Prince Rupert, offers excellent facilities for the transaction of every description of Banking business. It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

WESTERN FREIGHT RATES

VII.

With Regard to Traffic Necessities

Which of the three lines, if any of them, should be taken as controlling the rate question, was a point discussed in the judgment on the western freight rates. Mr. H. L. Drayton states, in the first instance, as the Canadian Northern, at any rate up to a comparatively short time ago, has confined its activities to the western territory now under consideration, namely, the three prairie provinces, affording the best operating conditions, it would seem that line could be accepted as the typical western line. The analysis of that company's revenues and expenses, however, as made by Mr. Muller, negatives this. If the Canadian Northern was to be adopted, its returns do not show anything like the same earnings as do those of the Canadian Pacific, and the anomaly is immediately reached of finding on the one hand that the Canadian Pacific Railway Company's western business is more remunerative than in the east, and on the other hand that the typical western line operating practically only in the west makes far less money.

All counsel for the different complainants united in objecting to the Canadian Northern's figures being taken as typical. Mr. Bicknell, counsel for the Dominion government, objects, and his objections extend also to the Grand Trunk Pacific's figures, that the traffic of both the lines has not yet fully developed; that they are not yet transcontinental roads; that so far they are only roads doing what might be called a local traffic, and handing over the traffic for transcontinental purposes to other roads; that the Canadian Northern and Grand Trunk Pacific are entering for the purposes of developing the resources of the country into new territory; that in a sense they are not yet competing lines; that they are, to a large extent, what are called granger lines, carrying the grain of the country and bringing in supplies to the grain-growers from the east, and are, therefore, only sharing at the present time in that portion of the business which is necessary for the development of the newer parts of the country which they are opening up.

Objection to Canadian Northern.

Mr. Cowan objects to the Canadian Northern's figures on the ground that the Canadian Northern is a railway company which has come in where another road is and must take its conditions. Secondly, that the growth of the Canadian Northern has been so rapid as to prevent proper financial returns, pointing out, also, that in 1902, the Canadian Northern had but a mileage of 1,276 miles, while its present mileage is 4,535; so that in 11 years the company's mileage had increased 3,277 miles.

It might be noted that he at the same time showed that the Canadian Pacific's mileage in 1901 was 7,331 miles, and that it had since increased to 11,602 miles, and had, therefore, constructed new lines to the extent of 4,271 miles. The new construction does not seem to have had any very detrimental effect on the revenues of the Canadian Pacific, although it must be borne in mind that a well-organized railway starting out with a well-worked-out business would probably be able to operate its extensions to more advantage than the newer line, and would have far more resources as a result of its large old mileage from which to make up deficits, if any, on the new lines.

Mr. Pitblado, for the Winnipeg Board of Trade, [illegible] his objection to the Canadian Northern as a standard on the following ground:—

That the company is still in the construction stage and is not operating under normal conditions; secondly, that it is still in the throes of building a transcontinental [illegible]; thirdly, that it voluntarily went into the western field for the purpose of competing on equal terms with the road already there; fourthly, that in making enormous extensions the company has been guided not so much by consideration of actual business as by the avowed policy of [illegible] into the territory; and, fifthly, that the extensions were built before the density of settlement had taken place which would justify the extensions as business enterprises.

It is also contended by [illegible] that the standard adopted should [illegible] Pacific, and that rates should [illegible]

vinces with disregard both to the Grand Trunk Pacific and to the Canadian Northern.

It is true that in this connection Mr. Bicknell expressed his wish that the board would so reduce rates, although on the Canadian Pacific basis, in such a way as to avoid doing injury to the other lines. He was unable to suggest how that end could be accomplished, nor was this to be wondered at, as beyond all question rates based upon the Canadian Pacific's power to stand reductions would inevitably bankrupt not only both the Canadian Northern and the Grand Trunk Pacific, but for the future preserve the western provinces to that company in so far as any new companies or new lines were concerned. It would be impossible for any ordinary company to live in competition with the Canadian Pacific Railway company under such conditions.

Mr. Muller in his evidence presses the matter to its logical conclusion. Admittedly the Canadian Pacific, the premier road, has received greater governmental assistance than have the other lines. As part of its original contract the company received a cash subsidy of $25,000,000 and 25,000,000 acres of lands, a free right-of-way and sites for stations, workshops, etc., in so far as lands vested in the Crown are concerned. The project had been under consideration for some considerable time before the final contract was let and part of the line had been actually constructed by the government.

Under the contract the constructed portion of the railway was transferred to the company and became its property. According to Mr. Muller, no attention should be paid to any property or advantage that the company derived under the agreement, either as expressed in the railway transferred or railway construction paid for, either by the moneys obtained from the cash subsidies or land grant or in the free right-of-way or exemption from taxation, when fixing rates. His contention may be illustrated by an example given in his evidence, the illustration being that of three railways operating in a common territory, each costing $10,000,000, two of the lines being built by the shareholders' money, but the third receiving a cash subsidy of $5,000,000. Applying this contention, the rates for the district would be fixed on the basis of a shareholders' interest of $5,000,000 in the bonused line, with the result that one-half the shareholders' interest in the other lines would be practically confiscated.

Fair Return to Carrier.

It may be stated that it was admitted that such a course had so far never been adopted, but that hitherto the question was rather the value of the property owned by the carrier and devoted to the public use rather than whether such property had been in whole or in part given to the carrier, or had been acquired at much less than its real value. If such had been the determining factor conversely in cases where the railway property had been acquired at inflated prices, the cost would have to be considered rather than the actual value of the transportation utility.

The position of counsel for the railways reduced to its logical conclusion, is, on the other hand, that the rates must be based on the returns of the weakest line. I am of the opinion that neither position is correct, but that rates should be considered having regard to the traffic necessities of Western Canada and a fair return to the carrier, apart entirely from any question of reserves of the company on the one hand or liabilities of the company on the other.

No governmental control has been exercised in Canada so as to insure that railway stock and securities should not be issued for less than a reasonable consideration. It would be entirely unfair to the shipper if he were compelled to pay rates which were based either on the amount of the capital stock, the bond issue or other liabilities of the company, a portion of which, on the one hand, may never have been applied in supplying the transportation system in respect of which the rate is to be made, or which, on the other hand, may represent in part merely a fictitious value.

Railway Board's Jurisdiction.

The board of railway commissioners has had nothing to do with building either the National Transcontinental or the Canadian Northern around Lake Superior or anywhere else, suggests Mr. Drayton in reference to an argument advanced on this point. The board, instead of sitting in review on acts of parliament, is governed by them. Nothing could be more fatal to the continued usefulness of the board of railway commissioners than for it to attempt to consider whether or not acts of parliament were passed for political expediency, even if it had, instead of lacking, the jurisdiction to do so. All counsel to the inquiry knew perfectly well that this commission has nothing to do with either the incor-

BONDS FOR $100

Many people of small means are possibly not aware of the opportunity for safe investment offered by our $100 Bonds. The small investor has looked upon owning Bonds as rather beyond him thinking of Bonds as being only in denominations of $1,000, or some other equally impossible sum.

But $100 will buy one of our Bonds, giving the holder of it precisely the same security as those of the largest denominations. They are a security in which Executors and Trustees are by law authorized to invest

poration of railway companies [illegible] panies may or may not cons[illegible]. A [illegible] ment has been made and given [illegible] it is a [illegible] to state that, as a matter of fact, the board [illegible] no jurisdiction to prescribe or limit [illegible] except in so far as industrial br[illegible] are concerned. A company, on re[illegible] from parliament, and after obtaining [illegible] approval of its route map, has the [illegible] the line authorized, subject only to [illegible] to move its location to any point within [illegible] of one mile from the route map as approved by the [illegible] subject to the regulations of the board [illegible] the [illegible] of public safety and convenience.

As pointed out by Mr. [illegible], the Grand Trunk Pacific undertaking is in no sense that of an [illegible]. It is in every sense a national work of great magnitude [illegible] building of which to a very large extent [illegible] controlled [illegible] parliament itself. A large part of the line forming part of the system—the National Transcontinental—is owned and built by the country, and, so far as the Grand Trunk Pacific itself is concerned, 75 per cent. of its cost is [illegible] turn guaranteed by the Dominion, and the expenditure and work [illegible] subject to governmental supervision. The building of the line and the whole enterprise not only received the assent of parliament, but the endorsation of the people of the country. Probably the very worst service the board could do the people of the west would be making, as they have been requested to make, such a scale of rates as would effectually prevent the fruition of the project and condemn it to insolvency before the line as a whole is actually constructed.

It is absurd to argue that such a company created under such conditions is to be looked upon, as suggested in an argument addressed to the board, in the same light as any ordinary charter under which a railway could or might be built, apart from all governmental recognition or support, and which could be incorporated merely to prevent a reduction in rates.

◆

REAL ESTATE NOTES

Mayor Pascoe, of Moose Jaw, received from the Grand Trunk Pacific Railway a cheque for $30,000, being the amount asked by the city for the land required in the exhibition grounds for a Grand Trunk Pacific station.

Sir Arthur Conan Doyle, while on his return trip [illegible] Canada, visited Fort William, and made an investment [illegible] Fort William real estate. The property secured by Sir Arthur is centrally located, for which he paid a cash p[illegible] of approximately $20,000.

At Montreal the Cleremont Apartments, situated [illegible] Cleremont Avenue, changed hands for the sum of $20[illegible]00. The vendor was Mr. Osias Lamoureux, and the purchaser Mr. Wolf Simon.

Expressing confidence in the stability of his [illegible] western investments Sir A. Soulange, K.C.M.G., of Par[illegible] a director in the Canada Mortgage Association, recently [illegible] his journey west to Edmonton after spending a day in Saskatoon. In company with Mr. R. Soulange, his son [illegible] the Saskatoon agent of his company, Mr. G. G. Calder, [illegible] of inspection was made of a number of the principal [illegible] in the city. Satisfaction was expressed with the [illegible] tion made by Mr. Calder who has p[illegible] about $5[illegible] for the company in the last two or three years.

One of the most modern of the new buildings [illegible] couver is that just occupied by the Credit F[illegible] Fr[illegible] Canadien, at the corner of Hastings and H[illegible] St[illegible]. It is ten stories in height, and cost $5[illegible]. The [illegible] which has its head office in Montreal, and [illegible] Winnipeg, Fort William, Quebec, [illegible] has had its office in Vancouver for [illegible] is their confidence in Vancouver that [illegible] the best office building that [illegible]

LOANS ON LIFE POLICIES

How They Have Increased—Loans Often Can Be Secured on Demand

BY T. BRADSHAW, F.I.A.

In 1897 the amount of loans on Canadian life insurance policies stood at $4,490,307, and represented 10.32 per cent. of the total assets. In 1912 the amount had increased to $25,879,863, the percentage being 12.23 per cent. This asset represents amounts advanced to policyholders on the security of their policies. There can be no question as to its merit—a good rate of interest is obtainable, and the amount lent is always less than the net value of the policy.

Interest Rate Varies.

The rate of interest charged varies from 5 per cent. to 7 per cent. While the asset is well secured and remunerative it is greatly to be regretted that policy loans are increasing so rapidly. There seems little doubt that many turn too readily—to their policies—as the easiest means to obtain money for temporary needs and thus materially lessen and in not a few cases completely destroy the primary purpose for which insurance should be taken.

Recently one company reported that it paid 1,000 maturing endowments; under 318, loans were outstanding at the time of maturity amounting to $603,556. The amount due from the company on these policies amounted to $985,984, but because of the loans the policyholders received in cash, when the policies matured, but little more than one-third of this amount.

During the last 25 years the percentage of policy loans of United States life companies to the reserve has increased from 3⅓ per cent. to 16 per cent., and the total of such loans now amount to $550,000,000. In the policies of many of these companies a provision is incorporated whereby loans can be secured on demand, which has the effect of making them liable for heavy demand withdrawals, as in the case of a bank.

Must Give Notice.

So serious has the situation become that state insurance officers have pointed out that as these companies carry only approximately 1 per cent. in cash it would be impossible to carry out their contracts during future money panics without the danger of wiping out their surplus by the forced conversion of their securities upon a broken market. The remedy suggested is that the companies shall reserve to themselves the right to defer the granting of policy loans or cash surrender value for a period of not less than 60 days.

◆

HALIFAX WEALTH WAS PROMINENT

A letter in a Halifax paper recently told that there was a time when Halifax could boast of a financial record to which no other city of its size in Canada could play a decent second. From causes which are self-evident the record is not now so good. In the middle of the last century Halifax was admittedly a rich city. The evidences of wealth and solidity abounded, and there was no city on the continent where there existed less destitution, and where the hand of charity had less call for its bounty.

"I have run over in my mind some of the rich men of that day," said the writer of the letter. "At the particular period I refer to, all those that I shall mention, except possibly one or two, were engaged in mercantile life in this city—and many of them spent their money like gentlemen of the old school. I will modestly open with three millionaires."

Seventy-six names were given in the writer's list, showing the total of $24,450,000. The first three names are responsible for $4,500,000, $1,000,000 and $1,000,000, respectively. In the list are the names of several who afterwards doubled or trebled their monetary value—the figures given are as they were in the early sixties. "I think the whole list will constitute an eye-opener to many who either did not know or had forgotten what constituted Halifax's acknowledged wealth 60 or 70 years ago," concludes the writer.

POSITION OF CANADIAN INDUSTRIALS

As Seen in Balance Sheets Recently Issued By Corporations

The experts have been watching closely the balance sheets and annual reports issued recently by the more important Canadian industrial concerns with the object of discovering how they have fared in regard to [illegible] off their large bank loans. On studying the individual returns it is found to be a difficult matter to generalize. A few of the large industrials have succeeded in effecting reductions in their liabilities to the banks, states a Canadian correspondent to the London Financial Times, after enumerating the reductions made by some of Canada's larger corporations, the writer adds:—

Several concerns of lesser importance show small reductions in liabilities, effected usually, as in the cases just mentioned, through allowing stock-in-trade to run off in the ordinary course of business. Where this was done the companies wisely refrained from loading themselves up afresh with large stocks of new goods. In the case of a number of undertakings reporting a little more recently there are to be noticed additions, sometimes quite substantial, in the amount of floating indebtedness. This unfavorable development apparently arose through the executive officers of these companies entirely misjudging the business situation.

Large Stock and New Factories.

After pointing out the companies with increased liabilities, he comments thus:—These statements give an idea of the way things have been tending in the affairs of the big industrial concerns of the country. It will be seen that in quite a number of instances the tendency has been to overstock with goods, and where that has been done no progress at all has been made in the matter of clearing off bank loans.

Another thing that has served to swell indebtedness to the banks in a manner working to the present disadvantage of the companies is the building of new plants or factories in the height of the boom. There are several instances in which expensive plants were erected with the proceeds of bonds bearing 6 per cent. interest, only to lie idle in whole or in part soon after completion. When the bank advances were swollen in this manner the only way of clearing off the excess lies through sales of bonds or debentures, and the market is not at all favorable for such sales at the present time. With reference to the excessive bank loans arising out of over-stocking or over-producing, the natural remedy would seem to be sales of goods at reduced prices, and a slackened rate of production. The output of goods has already been restricted, and workmen have been laid off quite extensively in many industries.

Bankers have been Pressing.

But so long as the banks are able and willing to carry these large concerns, they will probably defer sales at a sacrifice. It is the general expectation that trade will improve to some extent before the end of 1914, and if those expectations are realized the surplus stocks will perhaps run down in a satisfactory manner. In estimating the condition of the great number of smaller industrial and mercantile concerns it is advisable to remember that they are more amenable to banking pressure. The big corporations above referred to are not so susceptible to pressure from their bankers. The banks cannot in all cases say to them: "You must reduce your advances." On the other hand the bankers have been pressing the smaller concerns for over a year, and there is reason to believe that their liabilities as a [illegible] are not excessive.

◆

Removal of restrictions upon the importation of electric power from Canada and retention of the present limit of 15,600 cubic feet per second upon the amount of water diverted for power purposes from the Niagara River above the Falls on the American side, were advocated by Secretary Garrison in a letter to the United States House Foreign Affairs Committee. With the letter Mr. Garrison sent a report by Brigadier-General Kingman, chief of the army engineers, declaring that the [illegible] commerce of the Great Lakes probably soon would demand a ship canal between Lakes Erie and Ontario on American soil.

Trust Company Service

This Company acts as Executor, Trustee, Guardian and Private Agent, as Trustee and Registrar for Bonds and Transfer Agent for Stocks, as Agent to pay Dividends, Coupons and Bonds, and as Agent to assume full management of Real Estate.

INTERNATIONAL SHINGLE TRADE

United States Manufacturer Said to Have Used Wrong Figures—British Columbia Products

(Staff Correspondence.)

Vancouver, July 18th.

British Columbia shingle manufacturers take exception to the statement of Mr. C. E. Patten, of the Atlas Lumber Company, Seattle, given in response to an enquiry of the Wall Street Journal. It is declared that every figure quoted by Mr. Patten is wrong. He says that "since the first day of January there have been built in British Columbia shingle mills containing a total of 125 additional machines." The number in reality does not exceed 45 up to July 1st, and as a falling off is apparent in the shingle trade, it is not likely that any large number of machines will be added within the next few months, and at any rate the number would never be equal to that stated by Mr. Patten, as having existed when he wrote the Wall Street Journal, at least some weeks ago. It is stated also by him that "every mill is running full time and a great many of them operating nights." Only two large mills have been operating at nights, one with eight machines, and one of these will shortly close down its night shift. A misstatement is made when it is declared that from 700 to 1,200 cars (estimated) of shingles are exported from British Columbia to the United States each month. From January 1st to June 1st, all shingles exported to the United States from this province approximated 1,000 cars all told, or not as many in five months as Mr. Patten says goes each month. While 1,000 is an approximate figure, it would in no case exceed 1,100 and certainly not reach 1,200 for the five months.

Only had One-Twelfth.

He further states that British Columbia has obtained one-half of the shingle trade of Washington mills. The figures given out by the Red Cedar Shingle Manufacturers' Association of Washington placed the output for 12 months at roundly eight billion shingles. In the 1,000 cars shipped from British Columbia in the first five months of this year, there were 200,000,000 shingles, as compared with three billion, an approximate output of shingle mills in Washington state in five months. In other words, the comparison is as one-quarter is to three, or one-twelfth instead of one-half. Mr. Patten states that the cost of shingle manufacture in British Columbia is from 25 to 30 per cent. less than in Washington. The real fact is the cost on this side of the line is greater per thousand shingles. It is true there is an advantage in favor of the Canadian manufacturer as regards Oriental labor, but the average daily output on this side is 25,000 shingles as compared with 35,000 and even 40,000 in Washington.

United States Manufacturers had Share.

This slowness is due to the fact that greater care is taken with the product in British Columbia, for which reason the cedar shingle produced here is in better demand. The object is to give every shingle the vertical grain, which results also in much greater waste per log. Overhead expense being greater, it will be found that the cost of manufacture in Washington state is less than in British Columbia.

No mention is made by Mr. Patten of the large amount of lumber shipped into the Canadian west annually by the mills of the United States. During all the time of expansion of the prairie provinces, American mills have enjoyed the business to the full, and in the past four years they have shipped into Canada 815,000,000 feet.

◆

WILLIAM TOOK THE FIRST LIFE POLICY

William Gibbons was the first man to insure his life. This policy was made in June, 1583, and was for the sum of £383 6s. 8d., for twelve months, sixteen underwriters dividing the risk. This first policy also produced the first insurance law case, for when William died, in the following May, the underwriters attempted to maintain that twelve months meant twelve periods of twenty-eight days, and had to be taken into court before they would pay up.

IN FAVOR OF GROUP INSURANCE.

In the annual report of Burton Mansfield, [illegible] commissioner of the state of Connecticut, [illegible] to the discussion of group insurance. Mr. Mansfield says:— Life insurance in groups presents [illegible]. It is no great step to consider the group as a [illegible].

That two or three so-called [illegible] policies were issued many years ago covering the life of coolies so [illegible] to indemnify shippers transporting those coolies over the high seas does not take away from the [illegible] of group insurance its unique characteristics.

Since the insurance investigation of 1905, in New York, the work of the life insurance world has been largely constructive. The uses to which life insurance can be applied have multiplied rapidly. While life insurance has its natural inception in the individual such units are [illegible] assembled in groups and so considered.

◆

INSURANCE IN SASKATCHEWAN.

The first annual report of the superintendent of insurance for Saskatchewan is in the press, and will be ready for distribution in the near future. It will contain a general review of insurance in the province, the detailed financial statements of all the provincial licensees, a statement of the premium income and losses of all insurance companies, the names of all companies licensed in the province and a list of agents who have secured certificates of authority up to and including June 22.

Recently the superintendents of insurance of the four western provinces held a conference at Calgary with a view of making recommendations to their respective ministers in order that uniformity in laws and regulations might unify the insurance codes of the western provinces. One of the most important features of the conference was the drafting of a standard fire policy.

◆

WAYAGAMACK PULP AND PAPER COMPANY.

Net profits of $193,903 for the year ended June 30, 1914, were made by the Wayagamack Pulp and Paper Company. This compares with $151,773 last year, a gain in 1914, therefore, of about 28 per cent. over the profits of 1912. The report presented at the company's annual meeting last week, is the first in respect of a full year's working of the company's pulp mill, the statement to June 30, 1913, covering only six months' operation of this department, [illegible] a full year's lumbering activity.

The company's current liabilities on June 30, 1914, were $879,065, as against $436,959 on the same date a year ago, an increase of $442,106. Liquid assets amounted to $[illegible] 281, as against $601,284 the previous year. The increase in current liabilities is due to an increase of $[illegible] in [illegible] loans. Reserves against lumbering operations and contingencies stood at $79,146 on June 30 last, as compared with $168,266. Buildings, plant and machinery are held at $[illegible] 432,656, an increase of $354,872 over 1913.

The following table shows the profit and loss account at June 30 of both years:—

	1914	1913
Earnings for year	$4[illegible]	$[illegible]
Bond interest	21[illegible]	[illegible]
Net profits	$1[illegible]	$15[illegible]
Balance from previous year	[illegible]	
Balance at credit	$[illegible]	$1[illegible]

The earnings for the year, after [illegible] and expenses of administration, were $4[illegible], [illegible] with $256,773, an increase of $[illegible] [illegible] in 1913-14 was double that of [illegible] not increase in proportion with the [illegible] interest obligations were [illegible] company's bonds prior to the [illegible]. The balance at the credit [illegible] about 6.90 per cent. on the [illegible] standing.

In view of the industrial [illegible] is a satisfactory one.

ONTARIO ACCOUNTANTS' OFFICERS.

The officers for the ensuing year were elected by the Ontario Institute of Chartered Accountants at its 31st annual meeting. They are as follows:—President, Mr. Edmond Gunn; first vice-president, Mr. Bryan Pontifex; second vice-president, Mr. A. C. Neff; secretary-treasurer, Mr. Arnold Morphy; council—Messrs. A. K. Bunnell, J. Wyndham Eddis, George Edwards, Edmond Gunn, F. G. Jewell, Arnold Morphy, W. R. Morris, A. C. Neff, Bryan Pontifex, Malcolm Robinson, C. S. Scott, T. Watson Sime, W. B. Tindall, Osler Wade and Rutherford Williamson; representatives on the council of the Dominion Association—Messrs. R. J. Dilworth, George Edwards and C. S. Scott; auditors—Messrs. E. J. Leishman and G. T. Pillow; registrar—Mr. W. J. Valleau.

◆

MEN WHO DO NOT BUY INSURANCE

At a recent meeting of agents, Governor Dunne, of Illinois, said of life insurance:—

"There are three classes of people to whom it is possible to sell insurance. First, there is the man who when he becomes of the proper age to take unto himself a wife, looks around for some means to protect her in case of his death. That is the kind of a man that the insurance agent has no trouble in selling insurance to. Then there is the man who seems to have some slight idea of his duty toward his family, but who is careless in his duties toward them. That is the kind of man that the insurance solicitor does a favor when he sells him insurance. It is a matter of education to them. Then there is the class that will not buy insurance. The widows and orphans of this class of men the State is compelled to take care of by almshouses and orphan asylums."

◆

UNITED STATES SOAP COMPANY IN CANADA

Hamilton is to be the Canadian headquarters of Messrs. Proctor and Gamble, soap makers of Cincinnati. Mr. French, the company's treasurer, says:—

"The protection exercised by the British Government in regard to its products will force hundreds of the largest manufacturing concerns of America to at once establish great factories in Canada to supply their Canadian trade. We will at once prepare to build factories at Hamilton, Canada, and develop our Canadian interests as we have never done before."

A site in the east end of Hamilton is being considered, and it is expected that operations will be begun shortly on the plant, which will operate about January, 1915.

The company are soap, cottonseed, crisco, lard substitute and linseed oil manufacturers.

◆

PART-TIME LIFE AGENTS

We think that under certain conditions the employment of part-time life insurance agents is fully warranted, and that very unfortunate conditions would result if the companies were not in a position to employ such men. There are many men who find it difficult in their present vocations to provide a comfortable living for their families. They cannot, however, afford to give up their present salaried positions to work elsewhere on a commission basis until they have demonstrated in such spare time as may be at their disposal that they can earn more as insurance agents than they can otherwise. Unless such men can be employed as part-time agents, they must give up their present positions and become connected with a life insurance company under an arrangement by which the general agent or the company itself agrees to pay them a salary which will enable them to live until they have demonstrated their ability as life insurance agents. This plan is expensive for the general agents or the company, as for some time it will require an outgo in excess of the earnings. We think you will agree with us that the employment of part-time men under the above conditions is a benefit both to society and to the life insurance companies, in that it makes a man a better producer and enables the life insurance business to be conducted more economically. We realize that part time men are sometimes employed under conditions which are not as free from objection as those referred to above, but we think that the benefits of the plan far out weigh the objections. Our aim is to develop part-time men into full-time men as rapidly as possible.—E. E. Rhodes, vice-president Mutual Benefit.

HUDSON'S BAY MEETING

Corporation's Saleshop Policy—Hint to Municipal Assessors

When a company's profits suddenly show a big reduction shareholders often feel it incumbent on them to criticize the directors when the accounts are presented, and the Hudson's Bay meeting was no exception to the generalization, comments the London Economist. The chief factor in the company's profit-earning capacity is the condition of the Canadian real estate market, and the only sound policy for a concern like the Hudson's Bay Company is to sell during booms and hold on during slumps, hence profits are bound to fluctuate. Shareholders' criticisms, however, were levelled almost entirely at the sale shops policy. That departure was questioned at the time, but the directors had unbounded confidence in the success of the policy. Now that it has been started some shareholders seem to think that the buildings have been put up on too expensive lines, but there is plenty of justification for the directors' contention that it is necessary to cater for future requirements.

Not a Good Time.

The start was made perhaps at a moment which was not particularly favorable, but while Canada is commercially depressed is the time for pushing on with the sale shops policy in order to prepare for the revival when it comes. The balance-sheet shows that about £2,000,000 had been sunk in the stores business at May 31st last, and the returns for the year ended January 31st—a profit of £14,000—looked rather small by comparison. Still, the results must not be judged on the experience of one year, and that a bad one. The capital expenditure looks large, and the amount locked up in goods and livestock (£847,666) lays the management open to the criticism which applies to many Canadian industrial concerns just now—namely, the unwisdom of holding large stocks at the present time. It is just possible that the Harrod's Stores interests do not make sufficient allowance for the difference in conditions between London and Canada.

Wanted Accounts Modified.

One or two shareholders asked for the accounts to be modified in a way which would make them more easily understood, but it is difficult to see how this could be done. The balance sheet separates the assets into the various branches of the company's business, and the profit and loss and land accounts show the profits from these departments. These accounts might be amplified so as to permit of a check on the administration expenses in Canada on which the shareholders are at present uninformed. Possibly this was what Mr. Robert Ward had in his mind when he urged that the figures should be set out in a way which would enable them to grasp the operations of the company. Sir Thomas Skinner turned the discussion to the question of the value of the company's assets. He said that their unsold land, the instalments not due, and the townsites at assessed values for taxation made up a total of £26,000,000. It would be unwise, however, to place too much confidence in municipal assessments of Canadian townsites for valuation purposes.

MARINE INSURANCE SUFFERED

Ordinary Perils of the Sea—Speed and Careful Navigation

The first half of 1914 has wound up badly for Lloyd's underwriters, for rarely have there been so many big liners in trouble as at the present moment. The list of disasters embraces not only various points in the United Kingdom, but extends also to the East; while there is some reason to suppose that fresh trouble may also be reported from the American side of the Atlantic. Underwriters, says the London Financial Times, estimate that under the most favorable circumstances they can scarcely lose less than £300,000 in respect of the casualties already reported of late, this amount being calculated in respect of "averages," which are frequently only a few degrees less expensive than "total loss." The liners that have come to grief of late as the result of thick weather will in most cases have to submit to extensive repairs to the exterior of their hulls, while much interior damage has also been sustained. The cost of transferring and maintaining passengers will have to be met, to say nothing of salvage claims on the part of vessels which have "stood by" in moments of emergency.

To Ordinary Perils.

The public frequently overlook these items of expense in connection with disasters at sea, there being an impression that, so long as a vessel does not go down, any damage she may sustain is of comparatively trifling importance. A visit to Lloyd's just now would quickly dispel this impression. From the point of view of insurance interests, the unsatisfactory outcome of their business during June follows upon a long succession of unfortunate incidents in previous months; so that, while it is impossible as yet to give any reliable estimate of the actual amount of losses during the first half of this year, it may be stated with some certainty that the total will compare unfavorably with any normal corresponding period previously. Moreover, the accidents which recently occurred have been almost entirely due to what is commonly termed the "Act of God." That is to say, ordinary perils of the sea, and, this being so, it is useless for underwriters to attempt to raise premiums.

Liners were Chief Sufferers.

The fact that liners have suffered more severely than tramp vessels may be taken as attributable in part to the high rate of speed which is now customary on the principal ocean routes, and nothing that underwriters can do will alter the tendency in this direction. Possibly, however, if owners were made to keep a larger proportion of the value of the fleets at their own risk there might be some inducement to insist on a more careful navigation. But this is a matter which shipowners must be left to fight out with their underwriters, and doubtless some adjustment will be arrived at which will prevent so many serious casualties to passenger vessels, the net result of which is to impair the confidence of the travelling public in the safety of ocean trips.

NANAIMO MAY HAVE MOTOR BUS SERVICE

(Staff Correspondence).

Vancouver, July 18th.

Some time ago application was made to the city of Vancouver for a motor bus franchise. This was the second enterprise of the same kind that had been suggested. A similar application is now before the civic authorities at Nanaimo. It will be more feasible in that city for the reason that Nanaimo has no street car service. Last year a proposal to install a system of cars was discussed, but it did not go through. Victoria people are interested in the motor bus proposition and are asking for exclusive privileges for ten years; free water; exemption from taxation; an undertaking from the city to put in repair such streets as the busses will operate over; and a free site. In return for these concessions for the period of ten years, the company will operate four motor busses, giving a half-hourly service with a five-cent fare. The board of trade committee, to whom the matter was referred, recommended the granting of a franchise on this basis.

CANADA'S TRADE BALANCE

Correspondent of The Monetary Times Cites Effects of Canadian and British Bank Systems

Editor, *The Monetary Times*:

Sir,—In regard to Dr. Bonar's remarks on the balance of trade, which appeared in *The Monetary Times* of June 19th and 26th. Many of his inferences are altogether at variance with the facts, and must tend to give very wrong impressions, especially to the uninitiated. After expressing a doubt as to what constitutes an unfavorable balance, he goes on to say: "The traditional meaning of the unfavorable balance is that balance where the imports exceed the exports." This is true, but such a condition of trade would have a very different meaning to a debtor country that is a large borrower of foreign capital than it would to a country that is able to loan funds to almost every other country. While the borrowing country might cripple its domestic trade in the endeavor to settle this unfavorable trade balance, the creditor country's domestic trade would experience no evil effects in making the settlement, because large receipts in interest are continually pouring into the creditor country, thus replenishing its financial resources and keeping up the country's business status. This is the reason why an excess of imports into a creditor country like Great Britain cannot be looked upon as an unfavorable balance.

Contradiction of Inference.

There is clearly a contradiction in Dr. Bonar's inferences in regard to the trade of India. His conclusion is either wrong, or he has made an error in regard to which side the balance £26,000,000 belongs. If this balance represents an excess of merchandise imports, as stated in his article, it is an unfavorable balance; but, if intended for an excess of exports, then there would be no reason for his saying "India's trade is not the healthier on account of the large increase of £26,000,000" to her monetary resources. Of course, £26,000,000 may not represent a large amount to a country like India; but receiving such an addition to her financial resources should be more of a help to India's domestic trade than if she had had to pay out a similar amount from total resources of £26,000,000 less.

To quote Dr. Bonar further: "The English money, we may suppose, was offered to Canadians, who are at the same time asked what it is they want to buy with it when they get it; and they answer—American goods." It would be stretching a point very much to try to characterize the foregoing quotation as anything more than nonsense; there is certainly no business reason for such a conjecture. Dr. Bonar gives a very wrong impression by the way in which he endeavors to explain or account for the *modus operandi* in connection with the settlements of trade balances. It is in a passive sense only that settlements are effected through agencies such as he describes.

Take Advantage of Existing Conditions.

The existing conditions at times when the opportunities offer, being taken advantage of in making settlements, the primary or active undertakings are not gone into, as he would lead us to infer, with the end in view of carrying on certain well-defined or systematic settlements in connection with the country's foreign trade. Nothing of the kind, [illegible] as he describes, ever takes place between men or [illegible]. Importers do not trouble themselves even with what the exporters are doing, nor do the sellers of debentures, bonds and stocks bother themselves with how the country's trade balance is going to result.

To attempt to keep matters right by doing [illegible] would most assuredly make life too perplexing by [illegible] affairs unnecessarily complex. They each [illegible] own particular business. The importer knows [illegible] have to pay cash for the goods he imports, [illegible] porter, and the seller of debentures [illegible] know that they shall receive payment [illegible] chandise and products exported, [illegible] of debentures, bonds and stocks. They [illegible] goods as Dr. Bonar's inferences [illegible] balance imports and exports, so far as [illegible] equal values, but the excess [illegible] settled by the debtor with [illegible]

The settlements of trade balances [illegible] passive movements of capital [illegible] banks, very similar in nature [illegible]

banks, and at the same time very real, and often very trying and inimical to the interests of debtor countries.

Still further, Dr. Bonar asks the question: "For what consideration do our American friends finance our loans for us, to the amount of 170 millions or more?" Most decidedly, I contend, the Americans do not finance Canada's loans; but they sell Canadians merchandise and products to the enormous amount of 170 millions or more, more than they buy from us, for the consideration or profits on these enormous sales to our people. What greater consideration could they desire? Canadians sell their debentures, bonds and stocks in London. The "exchange" from these sales is keenly competed for by the London agencies of Canadian banks, because the banks well know from long experience with Canada's adverse trade that the "exchange" shall all be required.

Bidders for Exchange.

It is upon the Canadian banks that the responsibility devolves for making the payments of their customers' acceptances to foreign creditors (in this case the Americans). It goes without saying that these acceptors are creditors of the Canadian banks, consequently the banks are bound to pay their acceptances for foreign goods purchased. This is the reason the banks are so anxious and eager to secure all the Canadian exchange possible.

In addition to the London agencies of Canadian banks, they also have their branches throughout the United States, all of which are keen bidders for exchange, American and Canadian. The exchange is all absorbed in paying American and other foreign creditors, as comparatively little of it comes into the country to reinforce the reserves of Canadian banks. Through these causes the domestic trade and industries become very much handicapped. The loss of a natural increase to the gold reserves of the banks brings about insecurity by depreciation in value of assets, thus causing abnormal bank rates and stringency in currency circulation.

Gold Reserves Control Currency Issue.

At the same time, the banks are stuffed to almost bursting point with assets, which, because of their personal nature, being based on personal securities, are unavailable for the purpose of making settlements with foreign creditors. Now I do not wish to give the impression that greater security by the banks having adequate gold reserves would make assets based on personal property securities any more available for the payment of foreign indebtedness, but this is the point: the improvement made in the character of the assets by compulsion by the Bank Act insisting on adequate gold reserves would have the effect of checking excessive imports, and of reducing interest rates to normal or half of what they are to-day. This would double currency circulation and stimulate trade and production to such a degree that exports of products would be sufficient to pay for the country's imports, consequently there would be no necessity for exporting the gold, or even the securities. The country would thus be paying for its imports with its industry, its production, and would not have to deplete itself of its working or active capital, as is necessary for it to do now. For these reasons, not having to export gold, the gold reserves of the banks could be kept up unimpaired, which would place Canada in a very superior industrial position. In completion of my reply to Dr. Bonar's question, I contend that the benefits Canadian trade would have derived from the addition of over 170 millions of capital to its financial resources from loans, have all been destroyed by the excessively large excess of purchases of American goods.

To effect a change in the country's foreign trade, causing results to be the very opposite of what they are now, it is absolutely necessary to make the gold reserves of the banks control the currency issue, and not the capital of the banks, as the law is at present. Our system simply extends and widens credit far into the danger zone, while the British system establishes capital by eliminating credit.

Yours, etc.,
Wm. Galbraith.

Prince Albert, July 10th, 1914.

The Mutual Life of Baltimore holds the record among Maryland life companies doing an industrial business of having no negro policyholders during its entire existence of forty four years.

LAURENTIDE IN GOOD SHAPE

Analysis of the Company's Position—Power Situation in Montreal

Monetary Times Office,
Montreal, July 22nd.

The development of the Laurentide Company is now sufficient to conclude that by the end of the present year the company will be developing 60,000 horse-power, and that by this time next year the amount will be 1[illegible]0,000 horse-power. The development is designed for an ultimate capacity of 1[illegible]0,000 horse-power, and this should be made available with very little additional work.

The Laurentide Company's own power and lighting requirements are approximately 25,000 horse-power, so that by the end of this year it will have for sale no less than 35,000 horse-power and this will be increased to [illegible]5,000 available for sale next spring.

Many reports are heard concerning the sale of this power. The Montreal Tramways Company is said to have been considering the advisability of making a contract with the company for the supply of its requirements. The Tramways Company buys its supply from the Power Company, and also develops power itself through the Beauharnois Canal Development and steam plants in the city, but it is thought that the growing needs for transportation will make further arrangements imperative. It was also reported that the Laurentide Company was in negotiation with the Canadian Northern Railway for the sale of power to that company for its tunnel and terminal purposes and possibly for other purposes in connection with the new town of Mount Royal, but no deal has been completed and none of the power has as yet been sold.

Officials of the company do not evidence any concern over that fact.

Lumber and Pulp Operations.

In this respect, the company is in a somewhat unique position, inasmuch as it is now earning, through its lumber and pulp and paper operations, a dividend on its common stock and is able to finance the power development without unduly straining its finances. The saving through the substitution of waterpower for coal is equal to the interest charges on the new development. The company uses [illegible]5,000 tons of coal annually for heating and drying purposes, and, if necessary, electricity could be substituted. The cost of the development is said to be only between $4,000,000 and $4,500,000, so that the interest charges would be exceedingly light considering the amount of hydro-electricity which will be developed. The Laurentide officials consider their development one of the cheapest in the world.

The cost just mentioned is exclusive of transmission lines. The cost of the latter will largely depend upon where the power is sold and the arrangements which are made for its delivery. The development is at Grand Mere, on the St. Maurice, approximately in the vicinity of the Shawinigan Water and Power Company's development. The latter company sells at a large number of points, such as Three Rivers, the asbestos mining sections to the south of the St. Lawrence and other points, although the largest quantity is probably sent to Montreal, a distance of approximately 8[illegible] miles. The power is delivered to the Montreal Light, Heat, and Power Company, on the island of Montreal, and the latter company attends to the distribution. When the Shawinigan Company was ready with its power, some years ago, it entered into a contract with the Lachine Hydraulic Company for the sale of a block of power—probably 20,000 horse-power, at around $15 per horse-power—the Lachine Hydraulic [illegible] to attend to all the distribution on the island. This contract was taken over by the Power Company when it took over the Lachine Hydraulic.

Shawinigan and Power Companies.

Subsequently, contracts for [illegible] times the original amount have been made, though [illegible] at an [illegible] price. In the interval, the [illegible] Shawinigan Company and the Power Company [illegible] strengthened through stock own[illegible] companies are now owners of the C[illegible] is just completing a developm[illegible] Montreal. Out of the first development, [illegible]

horse-power available in November for Montreal, the Montreal Power Company being again the distributer.

These details show Montreal's position in respect to power. The supply is apparently in excess of the requirements. A question being asked is whether, in the event of not being able to sell power more advantageously, the Laurentide Company would make an effort to sign private consumers on the island of Montreal. This would be a big undertaking; also, relationships between the Laurentide and the Power and Shawinigan companies are friendly and the Shawinigan Company already has a transmission line, the capacity of which may possibly be sufficient for both it and the Laurentide power supply. For all these reasons, it would not surprise the street to hear that some sort of arrangement was being considered between the three companies.

Development of Laurentide.

Work on the new development of the Laurentide began in the early part of 1912. A dam has been built across the river and the power house is in course of erection. The project is well on towards the point at which the machinery will be installed, the units having a capacity of 20,000 horse-power. These are evidently being handled in threes, as the development will increase by 60,000 horse-power at a time. The concrete pits which will contain the waterwheels will be located 40 feet below the surface of the river, and the total head will be about 78 feet. When the final section or dam is completed, the water will be raised by 20 feet in low water, and by 30 feet in high and the river will then back up, giving a pond extending approximately 25 miles above the dam. This is necessitating the construction of a large embankment extending some miles above the dam. Beyond this, the property is owned by the company and flooding will cause no damage.

Meantime, the pulp and paper plant is operating without interruption. The company has orders on hand for as much pulp and paper as it can turn out, and the mills are being operated day and night. The output is probably greater than in any other mills in Canada. A new ground wood plant is being erected and German grinders, which will give the new plant three times the capacity of the old, are being installed. In addition, a new steel conveyor for the logs, as they come from the saw mill, is being installed.

◆

WHY MORE INSURANCE IS NEEDED

"If I had my way I would write the word 'INSURE' over the door of every cottage and upon the blotting-book of every public man, because I am convinced that for sacrifices which are inconceivably small, families can be secured against catastrophes which otherwise would smash them up forever. It is our duty to . . . arrest the ghastly waste, not merely of human happiness, but of national health and strength, which follows . . . when, through the death of the breadwinner, the frail boat in which the fortunes of the family are embarked flounders, and the women and children are left to struggle helplessly on the dark waters of a friendless world."—Winston Churchill.

◆

EARNING AND SPENDING MONEY

The American people are noteworthy for extravagance. North America is free with its, or other people's money. In good and bad times, the tobacco bill is large, and other such accounts vary little. Some striking statistics, supporting this contention, were given recently by Mr. R. H. Treman, president of the New York State Bankers' Association. He stated that the total value of the United States farm crops for 1913 was forty-nine hundred and thirty-nine million dollars, and the total value of the mineral products for 1912 was twenty-two hundred and forty three millions, representing two of the most important items in the creation of the yearly wealth of the country. Here is the way some of the wealth was expended. The figures are in millions of dollars:—For intoxicating liquors, 2,300; tobacco, 1,200; jewelry, 800; automobiles, 500; candy, 200; tea and coffee, 100; millinery, 90; patent medicine, 80; chewing gum, 13; United States navy, 120; United States army, 162; fire loss, 214; total expenses United States Government, 968

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

London Street Railway Company.—At a shareholders' meeting of the London Street Railway Company the issuing of bonds to the extent of $750,000 for extensions, improvements and the purchase of additional rolling stock was ratified.

Canadian General Electric Company.—Mr. Frederic Nicholls, president of the Canadian General Electric Company, has stated that while the company is experiencing a falling off in the volume of orders received, the Canada Foundry department has received a greater number of orders in the past six months than in the first six months of 191[illegible] Collections have been good, and the company's liabilities have been reduced by over $2,000,000 since the beginning of the year.

Dominion Telegraph Company.—The annual meeting of the Dominion Telegraph Company was held recently. Under an agreement made in July, 187[illegible], the lines and plant of the company were leased for 9[illegible] years to the American Union Telegraph Company of New York. This lease is now held by the Western Union Telegraph Company, which pays to the Dominion Telegraph Company 6 per cent. on its capital stock of $1,000,000, and this is distributed among the shareholders of the Dominion Company. Sir Henry Pellatt presided at the meeting in the absence of Mr. Thomas Swinyard, the president. The report was adopted, and the following directors were appointed:—Belvidere Brooks, Thomas F. Clark, Colonel Robert C. Clowry, Aemilius Jarvis, Charles O'Reilly, M.D., Colonel Sir Henry Mill Pellatt, C.V.O., Frederic Roper, George P. Schofield and Thomas Swinyard.

Unity Building Company.—At a meeting of the bondholders of the Unity Building Company, a plan submitted by the bondholders committee was unanimously approved. Bondholders holding $175,000 of the total $[illegible] bonds were present.

The plan submitted by the committee is understood to be that bondholders pool their bonds in order that the [illegible] Trust Company, the trustees, can make a bid sufficiently large to protect their interests.

It was stated after the meeting that this course was the only one open to bondholders, for the reason that if a bid of sufficient size were not made to protect them the building might go by auction at a ridiculously low price. The building at the present time has about 60 per cent. of its space rented. The prospects for renting the balance of the space are held to be much better than at the time the building went into the hands of the liquidators.

Alabama Traction, Light and Power Company.—The Alabama Traction, Light and Power Company, Limited, which has its head office in Montreal, has issued its [illegible] annual report, with a consolidated balance sheet of the company and its subsidiaries as at December [illegible] The company is controlled by London and New York [illegible] but the board of five directors as constituted [illegible] company was organized includes three [illegible] Mr. Lawrence MacFarlane, K.C., of Montreal, who [illegible] and Messrs. W. D. Ross, of Toronto, [illegible] of Montreal.

From March to August, [illegible] purchase the entire capital stock [illegible] in the traction, light and power [illegible] in the district of which Birmingham [illegible]

At the date when the report [illegible] president, that is on May 15 last, [illegible] 160 miles of 10,000-volt transmission [illegible] through three sub-stations [illegible] miles of circuit, operating at [illegible] state that owing to the business [illegible] new business proved more difficult [illegible] the results were for a time [illegible]

A change, however, has [illegible] and satisfactory progress is [illegible]

"SOLID AS THE CONTINENT"

Every year shows a marked increase in the number of policies for large amounts placed with the North American Life.

The fact is significant.

It proves that the Company's financial standing and business methods stand the test of expert scrutiny.

A TYPICAL CASE.—The holder of Policy No. 21 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 13% in each of the years 6-10, by 28% in each of the years 11-15, by 40% in each of the years 16-20, and a reduction of 50% in the years 21-22. In the 22nd year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

business. "It is estimated," states the president, "that by the end of this year the contracts already obtained, together with the public utility enterprises owned by the company, will be producing sufficient net revenue to cover all fixed charges and operating expenses."

The company has outstanding $10,902,500 5 per cent. bonds of an authorized issue of $25,000,000; $2,000,000 preferred and $16,955,000 common stock. Its total assets are $30,429,269, of which $27,109,864 is in properties, etc. Current assets total $403,018. In current liabilities of $1,129,896 are included $640,669 notes payable by subsidiaries.

Net income from operating subsidiaries from August 6, 1912, to December 31, 1913, after deducting $84,523 for fixed charges, but before providing for depreciation, was $93,133, which appears on the balance sheet as surplus on December 31 last.

Brazilian Traction, Light and Power Company.—At the annual meeting of the Brazilian Traction, Light and Power Company, Sir William Mackenzie, chairman of the board, presided in the absence of the president, Dr. F. S. Pearson. In a brief speech Sir William called attention to the decreases in operating expenses being shown in current earnings, due to the completion of power plants. He expressed the opinion that stockholders could congratulate themselves on the result of operations so far and stated that the future promised even greater prosperity than the company had enjoyed in the past. Two changes were made in the directorate, Mr. Alfred Mata, of Rio de Janeiro, and Mr. C. D. Magee, of Toronto, who retired, being replaced by Judge Phippen, of Toronto, and Mr. H. H. Marshall, the latter formerly chairman of the Underground Railways of London, and at present president of the Yorkshire Power Company, one of the largest in Great Britain. The other directors were re-elected.

SHOULD LIFE INSURANCE AGENTS BE LICENSED?

Mr. W. H. Orr, Toronto, writes *The Monetary Times* as follows: "My answer to the question, should life insurance agents be licensed? from out of an unfortunate experience with agents' licenses, some 18 or 20 years ago, in Toronto, is a most decisive No.

"It was nothing but an unmitigated nuisance to managers and agents while it lasted, which was for only one year, I think. I do not believe it had a single friend, either in management or agency, after it had once been tried. It was merely an additional tax on a business which should be encouraged rather than taxed. Licensing an agent is too much like taxing a dog. Neither could be allowed the use of the streets unless he was prepared to show his tag."

Robb Corliss Engines

A simplified valve gear, multi-ported valves, short stroke and compact frame permit a much higher speed than regular Corliss gear.

Half as many parts to wear, no springs, no dash pots, no latches, no cams, no disengaging parts—but Corliss steam distribution and small clearances.

DECREASE IN TRADE DISPUTES.

The number of trade disputes reported to the department of labor, Ottawa, during June was nine, one less than for the previous month, and two less than the corresponding month of the previous year. The total number of disputes in existence at the end of the month was 22, as compared with 15 during May. The largest disputes of the month were those of carpenters at Montreal, in which 1,000 employees were concerned, carpenters at London affecting some 200 men, and miners at Nordegg, Alta., to the number of 300 directly and 600 indirectly.

FROM THE CALGARY OILFIELDS.

(Special Correspondence.)

Calgary, July 15th.

When interest in the possibilities of the Alberta oilfields was followed by the formation of so many companies to explore the territory, it was predicted that in order to make a reasonable portion of these companies successful, amalgamation would be absolutely necessary, otherwise too much would be eaten up in overhead expense and duplication of work. Apparently this is about to become a fact as the announcement of the Consolidated made to-day, intimates. This amalgamation is officially presented to the public and, it is said, 40,000 shareholders, by Mr. W. H. McLaws, acting for the amalgamated interests. Eight companies whose capitalization aggregates $25,000,000 will be merged into the Alberta Petroleum Consolidated, whose assets will consist of large areas in practically every district where drilling is being carried on together with several drilling outfits and well-drilling contracts. The principal operations will for the present be confined to the Dingman anticline in the immediate vicinity of the Dingman well where the Consolidated will have five separate properties adjoining the section on which is situated the Discovery well. The directorate will consist of some of the most prominent business men in the city and actual oil operators in the United States field. All the companies will have representation on the Consolidated board.

The companies so far included in the consolidation are:—Herron-Elder, capital, $1,500,000; Alberta Petroleum, capital, $1,000,000; Okotoks Oil Company, capital, $1,500,000; Calgary Alberta Petroleum, capital, $10,000,000; Cooper Oil Company, capital, $500,000; Sweet Grass and Pincher Creek Syndicate, capital, $2,500,000. Over 100,000 acres of oil leases are in the control of the Consolidated.

Some comment was caused in Calgary on account of a statement emanating from the acting mayor of Montreal that the oil exhibited by the Alberta government as the product of the Dingman well was not the simon pure article. Publicity Commissioner Daley, of Winnipeg, states that the visitor from Montreal merely looked through the window and did not enter the office to secure any information regarding the oil. The incident, which has aroused the ire of the Alberta government officials, is looked upon as calculated for the express purpose of personal publicity.

Crop conditions in the south are improved along the edge of the drybelt. This latter section, however, is badly damaged, but the lessening of the total grain yield will not be very heavy. East and north wherever grain was well put in, the crop is certainly fine. In the grassy country north there is feed to the knees and cattle looking well.

MUSKOKA THE BEAUTIFUL

Do you know the place? If not, your pleasure has suffered! Take a free trip, a mental little journey through Muskoka by asking for that handsome Muskoka folder, issued by the Grand Trunk System. MINERAL OUTPUT IN NOVA SCOTIA

Variety of Mine Products—Where Nova Scotia's Coal is Sold

The following table shows the mineral production of Nova Scotia during last year compared with 1912; the year ending September 30th:—

Minerals.	1912.	1913.
Coal raised, long tons	6,802,997	7,203,913¼
Pig iron, short tons	411,388	486,962
Steel ingots, short tons	461,392	483,600
Limestone, short tons	473,067	547,004
Coke, short tons	603,372	728,037
Gypsum, short tons	280,000	271,609
Building-stones, short tons	11,664	13,186
Bricks, number	22,348,486	19,658,988
Drain-pipe and tile, feet	987,922	1,276,159
Grindstones, short tons	400	140
Gold-bearing ore, short tons	15,868	7,324
Gold, ounces	4,948	2,365
Manganese ore, short tons	233	......
Moulding-sand	1,190	180
Tungsten concentrate, short tons	14	10
Sulphate of ammonia, gross tons	5,213	......
Briquettes, gross tons	......	30,485
Barytes	974	700

The iron ore imported in 1912 was 880,904 net tons and in 1913, 911,168 net tons.

Coal Sold During Year.

The returns of coal sold during 1913, compared with the returns for 1912, are as follows:—

	1912.	1913.
Nova Scotia	2,295,363	2,599,043½
New Brunswick	653,938¾	646,642
Newfoundland	200,642	210,544½
Prince Edward Island	92,302¼	96,082½
Quebec	2,159,005	2,193,228¼
Ontario	......	29
United States	412,351	468,090¾
St. Pierre	9,406¼	6,650½
Other countries	91,825	2,830
Bunker	236,733¾	234,177
Time chartered boats	25,867½	21,391½
	6,177,615	6,478,709½

Analysis of Coal Sales.

The increase in sales of Nova Scotia coal to Nova Scotia in the decade ended September 30th, 1913, has been 86 per cent., to New Brunswick 56 per cent., to Prince Edward Island 20 per cent., to Newfoundland 60 per cent. and to Quebec 27 per cent. The coal produced in the county of Cape Breton for the fiscal year 1913 was 5,594,192 tons, compared with 5,197,601 tons in 1912. Pictou county produced 703,583 tons for 1913, compared with 682,883 tons for 1912. Cumberland county produced 621,864 tons for 1913, compared with 632,809, and Inverness county produced 284,274¼ tons for 1913, compared with 280,704¼ for 1912.

◆

The Nova Scotia Steel and Coal Company have secured an order for 12,000 tons of steel in connection with the new Halifax terminals. The company has also secured an order from the Canadian Northern for spikes, bolts and angles.

The weekly paper "Canada" prints an excellent portrait in color of H.S.H. Prince Alexander of Teck, which is presented with the issue of that journal for July 4th. His Serene Highness, who is to succeed next October H.R.H. the Duke of Connaught as Governor-General of Canada, gave special sittings for this portrait, and his signature attests his approval of the result. The Prince is seen in a lounge suit, standing in a characteristic attitude, and the life-like coloring of the portrait is well retained in the reproduction. "Canada" continues its energetic pace as the leading Canadian illustrated weekly in England.

IS CANADA OVER-BORROWING?

The facts and figures with which to give an authoritative reply to this oft-heard question, are contained in

"Capital Investments in Canada"

By FRED. W. FIELD THIRD EDITION

While it had not been the publishers' intention, the demand for a revised edition of "Capital Investments in Canada" has made necessary the publication of the third edition of this useful and timely volume. Orders already received will be filled as soon as possible, and new orders are now being taken. With the exception of the appendix containing a list of Canadian flotations in London since January, 1905, which will be revised at the end of each year, the book will not be revised again. This is the last opportunity, therefore, to obtain the complete volume.

"Capital Investments in Canada" contains some valuable facts and figures respecting one of the most attractive investment fields in the world. It deals in detail with British, United States and foreign investments in the Dominion. Canadian government, railroad and industrial borrowing in London each have a separate chapter.

Municipal borrowings overseas, one of the most important phases of Canadian financing to-day, is dealt with at length, and a complete list is given of the £34,000,000 of loans which Canada's municipalities have raised since 1905.

Other subjects treated are:—Canada's credit abroad; Canadian provincial securities and the British trustee list; new capital from immigration; the relation of trade to borrowed money; Canada's share of British capital; Canada and international finance; crops and borrowing; and some notes of warning.

The volume is revised, throughout, to January 1st, 1914. The appendix of Canadian flotations is brought up to the end of July, 1914.

GOOD LIFE INSURANCE AGENTS

How They Are Made Up—Must Get Business That Will Stay on Book

According to state insurance commissioner Epsteen, of Colorado, a good general agency is almost an insurance company in itself. Its problems are as numerous and as varied, its troubles and difficulties as great. The general agent must be a man of character and of force. He must not only be well versed in insurance; he must be a student of men, a financier, an organizer, a man of tact, and a man of talent.

He must know how to organize and maintain an office; not merely an office which will run smoothly while he is present, but one which will run even when he is called away for days and weeks at a time. He must be able to sell insurance himself. He must know how to organize a field force; and, when it is organized, he must know how to conserve and maintain it permanently. He must know how to take the young, green recruit and teach him to become an efficient insurance solicitor.

Must Not Discredit.

He must teach his men not to discredit their competitors—to work in harmony with the other insurance men. It does not pay to discredit a competing company. "It does you credit," says Mr. Epsteen, "to think that yours is the best company in the world, but down in the bottom of your heart you know perfectly well, if your general agency were canceled and you received a general agency for another company, you would be equally loyal to it and you could just as conscientiously recommended its policies.

"The general agent must teach his solicitors the enormity and futility of rebating. He must convince them that twisting is wrong and that misrepresentation is criminal. He must be able to impart to his solicitors the knowledge how to fit a policy to the needs of the applicant.

Business Must Stick.

"What every general agent wants is business—quality and quantity, but quality first. Business which does not stick is not only worthless, but it is a distinct loss. The greatest asset to a general agent as well as to a company is a satisfied and contented policyholder. The general agent must, therefore, be able to get business himself; to teach his solicitors how to get business and to be able to conserve the business which has been acquired. To do all this requires qualities of a high grade.

Begin in the Field.

"Probably the best way to rise in the insurance business is to begin in the field, rate-book in hand, as a solicitor. The problems of the solicitor are different from those of the state superintendent, from those of the company, and, in a less degree, from those of the general agent. But if his problems are different, they are none the less strenuous and important. While all are needed—state supervisor, company, general agent, and solicitor—I am of the opinion that the solicitor is the most important of all. It is the solicitor who gets the business; he is the original producer—the man with the hoe. Without him, and without the personal soliciting of the general agent, company executives would have nothing to do, commissioners would have nothing to supervise."

◆

"It is because we are so convinced of Canada's economic wealth from Atlantic to Pacific that the Canadian Pacific Railway has spent and is still spending such large sums on construction and equipment."—Sir Thomas Shaughnessy.

"There is no need to take a gloomy view of Canada's future," says the London Economist, "but it is high time that the Canadian public authorities—federal, provincial and municipal—put their houses into financial order. Borrowing has been too easy. It is high time to make budgets balance, and to take care that public money, whether from taxes, or loans, is more thriftily spent. First-class financial supervision is urgently required. As to land and other speculation the danger of it is now known, and many luckless [illegible] under their losses. When prices were [illegible] the London press was full of highly-colored [illegible] B. C. [illegible] and make fortunes."

NEW INVESTMENT OFFERINGS

Packing Company's Bonds—Abitibi Stock Issue Postponed—Municipal Yield

A block of $150,000 George Barker Salmon Packing Company first mortgage 6 per cent. guaranteed 15-year sinking fund gold bonds is being offered by Messrs. Æmilius Jarvis and Company, Toronto. The bonds are guaranteed unconditionally as to both principal and interest. They yield about 6¼ per cent., and the price is 98 and interest. The company's capitalization is as follows:—

	Authorized.	Issued.
First mortgage bonds	$150,000	$150,000
Capital stock, ordinary shares..	25,000	25,000

The prospectus gives full details of this investment.

Canadian Tube and Iron Company.

An issue of 1,000 new shares at par of the Canadian Tube and Iron Company is being offered to shareholders of the company of record of July 16th.

The issue was authorized by the directors in June. The first payment of 20 per cent. is due on August 1st next, with other instalments of a like amount due on the 1st of September, October, November and December.

An issue of $250,000 7 per cent. cumulative preferred stock at $95 a share, with a bonus of common stock of the Abitibi Power and Paper Company, has been postponed temporily. It is the unsold balance of $1,000,000. The company's capitalization is as follows:—

	Authorized.	Issued.
7% cumulative preferred stock...	$2,000,000	$1,000,000
7% debenture stock	1,000,000	1,000,000
Common stock	5,000,000	5,000,000
First mortgage 6% bonds	5,000,000	2,500,000

British-Canadian Canners.

The British-Canadian Canners Company has issued a circular to the bondholders explaining its position in connection with the proposed further issue of $500,000 of first mortgage bonds, which the company cannot put out without the consent of the present bondholders.

It is stated that the reason for the further issue is that it will be necessary for the company to obtain a very large line of credit from its bankers during the height of the canning season. The required line of credit has been obtained on condition that the directors guarantee the advances. This, they have agreed to do, provided that the bondholders consent to the new issue, which will not be sold at the present time, but is to be deposited and pledged with the bankers of the company to secure the necessary advances. Bondbolders will be asked to ratify the new issue at a meeting in Montreal on July 26th.

◆

COST OF LIVING IN JUNE.

The department of labor's index number of wholesale prices stood at 136.2 for June as compared with 136.2 in May and 136.4 in June, 1913. Advances in oats, barley, corn, flaxseed, cattle, beef, lamb, dairy products, sugar, glucose, wool, cotton, hides and tallow, lead and anthracite coal, were offset by declines in wheat, hogs, iron, brass, tin, silver, spruce, miscellaneous building materials, furs and raw rubber.

In retail prices the features of the month were a general advance in potatoes and the continued decline in butter. Several declines in mutton, lard and fish occurred, but eggs were higher in many localities and sugar began to advance.

◆

The following companies have been registered to do business in British Columbia: The Seamless Rubber Company of New York, of New Haven, Conn.; Frick Company, of Pennsylvania; Hoosier Manufacturing Company, of New Castle, Indiana; Westminster Trust Company, head office, New Westminster. The following companies have been licensed to do business in British Columbia:—W. Clark, Limited, of Montreal; Egg-O Baking Powder Company, Limited, of Hamilton, Ont.

SLIGHT INCREASE IN ACREAGE

Western Provinces Have Larger Area Under Crop—Official Figures

In a bulletin issued by the census and statistics office, revised estimates are given of the areas sown to spring crops this year and of their condition on June 30, as well as estimates of the acreages under the later sown cereals and hoed crops and of the numbers of farm live stock. The estimates are based upon returns collected from the crop reporting correspondents of the office at the end of June. With regard to spring-sown crops, the estimates are fairly confirmatory of those issued a month ago, the areas of wheat, barley, mixed grains and hay and clover being however somewhat less, and of oats, rye, peas and alfalfa somewhat more than the preliminary estimates published a month ago, when it was reported, as regards eastern Canada, that seeding had been considerably delayed through the lateness of the spring. The area under wheat is now therefore placed at 11,022,000 acres or 7,000 acres more than in 1913.

Spring wheat occupies 10,048,700 acres, as compared with 10,045,000 acres in 1913, and the area to be harvested of fall wheat is placed at 973,300 acres as compared with 97[illegible] acres last year. The area under oats is placed at 10,814,500 acres, which is 380,500 acres more than in 1913, when the area sown was 468,000 acres more than in 1912. Barley is estimated to occupy 1,597,000 acres, as compared with 1,613,000 acres last year, rye 111,280 acres, as compared with 119,300 acres, peas 205,950 acres, as compared with 218,9[illegible] acres, mixed grains 463,300 acres, as compared with 47[illegible] acres, hay and clover 7,997,000 acres, as compared with 8,169,000 acres and alfalfa 90,385 acres, as compared with 93,560 acres.

Wheat in the West.

For the three western provinces of Manitoba, Saskatchewan and Alberta the revised estimate of the wheat acreage is 10,063,500 as compared with 10,036,000 acres last year; an increase being shown in Saskatchewan and Alberta, but a decrease in Manitoba. Oats in the three provinces occupy 6,106,000 acres, as compared with 5,792,000 acres in 1913 and barley 1,038,000 acres, as compared with 1,025,000 acres. The net increase in the three provinces for the three crops is:—Wheat, 27,500; oats, 314,000; and barley, 13,000 acres, a total of 354,500 acres for the three crops. The largest increase of area in the three provinces is for oats, 314,000 acres, which apparently shows that increased attention is being given to mixed farming.

The acreages under the later-sown cereal crops of 1914 are estimated as follows:—Buckwheat, 354,000, as against 380,700 in 1913; flax, 1,163,000, as against 1,552,800; corn for husking, 256,000, against 278,000; beans, 43,830, against 46,200; potatoes, 475,900, against 473,500; turnips, etc., 175,000, against 186,400; sugar beet, 15,500, against 17,000; and corn for fodder, 317,000, against 303,650. It will be noted that the area under flaxseed is 389,800 acres less than last year, the decrease being principally in Saskatchewan, where the area sown to flax is 1,030,000 acres or 356,000 less than in 1913.

Spring-Sown Crops.

The condition of spring-sown crops at the end of June was on the whole fairly satisfactory, except in regard to hay and clover, which, having been affected by the prolonged drought, has a standard condition of 77.7 as compared with 90.2 a month ago. All the other crops have receded from the high figures of June 1, and at June 30, their condition, in per cent. of the standard of 100, taken as representing the promise of a full crop, was as follows:—Fall wheat [illegible], spring wheat 86.3, all wheat 8[illegible].5, oats 87[illegible], barley [illegible], rye 84.7, peas 86.0, mixed grains 8[illegible], alfalfa 81[illegible] and pasture 83.2. The condition of spring wheat is [illegible] in Saskatchewan. Assuming the condition between now and harvest will be equal to the average of the past six years 1908-13, the percentages of the standard condition for wheat, rye, barley and oats represent the promise of yields per acre superior to the six-year average in the case of spring wheat [illegible] and barley by 3 per cent., and that of rye [illegible] equal to the average in the case of oats and 1 per cent. inferior in the case of fall wheat.

Estimates compiled from the reports [illegible] as to the numbers of farm live stock at the [illegible]

[illegible] caused by such [illegible] provinces, especially Saskatchewan and Alberta.

◆

PULPWOOD CONSUMPTION CROWS.

The consumption of pulpwood by Canadian pulpmills has increased by [illegible] per cent in the past year, according to the records of the forestry branch of the department of the interior. The manufacture of pulp has increased and the exports to the United States, Great Britain and China have decreased. While the imports have also increased, these form but a small part of the total consumption of pulp.

Canada still exports almost half of the pulpwood she produces in the raw state, although these exports are being checked by regulations enacted in the different provinces which forbid the export of raw, or unmanufactured, timber cut on Crown lands. The recent legislation in the province of Quebec which also forbids the export of "raw" timber from lands granted to railway companies will tend to further decrease this economic waste.

Altogether 4[illegible] firms operate 65 pulp mills in Canada. Quebec has [illegible] of these mills, Ontario, 17; Nova Scotia, 4; New Brunswick, 4; and British Columbia, 3. In addition to these active mills, reports were received at the forestry branch from [illegible] firms whose mills were idle and 5 firms with mills under construction.

◆

IN REAL ESTATE CIRCLES.

Two hundred and fifty thousand dollars [illegible] price paid to Mr. A. I. Cunningham, of Seattle, on behalf of Washington capitalists, for a couple of hundred [illegible] of fruit lands in the vicinity of Fort George [illegible]. The land was purchased from F. R. Fraser, of Fort George, who has extensive holdings of fruit lands in that district.

LIFE AGENTS AGAINST TAXES

American Policyholders Pay Thirteen Millions in Taxes

The National Association of Life Underwriters, a sister to the Canadian organization, is waging war on the taxation of life insurance policyholders. Mr. Edward A. Woods, of Pittsburg, vice-president of the association and chairman of the taxation committee, has written a bulletin on the subject and says:—"This is America's great burden on thrift and providence. The taxation of life insurance is a rapidly-increasing evil directly affecting 25,000,000 of our people. America alone of all governments in the world civilized or heathen—so taxes life insurance."

The bulletin sets out that American policyholders pay over $13,000,000 in taxes—besides taxes upon real estate and upon their capital stock, if any, which are not objected to. This amount would have added 15 per cent. to the refunds or dividends, purchased over $550,000,000 additional insurance, paid the salaries of all the officers of all the companies about seven times over, added about $70 to each $1,000 paid in death claims, or decreased other expenses about one-seventh. The association asks:—"Is thus providing for one's widow, children or old age, relieving the state of this burden, so nearly a crime as to be thus penalized?"

Tax is Hidden.

In preparing this bulletin for wide-spread distribution, the Life Association expressed the opinion that the taxation evil has grown because the tax has been "hidden." On the subject of hiding the tax the bulletin states:—"Do policyholders know that their entire premium never reaches the company? Suppose when a policyholder sent $100 to his company, he had to send a cheque for $2 or $3 to the tax collector. Would he stand for it? Of every $100 of premiums sent from various states to the respective companies, there are variations of from a few cents to several dollars taken out by the state treasuries. We are making discrimination a crime for everybody else. Why should the states continue it themselves? If village neighbors collected $1,000 for a destitute widow and her orphans and were met at her house by a tax gatherer demanding $70 he would probably be mobbed. Yet this is what our states take from every $1,000 paid to the widows—and all because agents and policyholders stand by and assent to its being done—and some policyholders even censure the officers for endeavoring to prevent increased taxation, and then demand cheaper insurance!"

Conservation of Funds.

The bulletin closes with a quotation from the National Convention of State Insurance Commissioners, who have gone on record to the effect that "the State should insist upon the faithful conservation of life insurance funds and their application to their intended use. It should be as reluctant itself to divert them from their intended use as to permit individuals to employ them for political purposes or in extravagance of management."

◆

Messrs. Robins (England), Limited, state that the first returns of 10 per cent. on account of capital and profits to the English shareholders in Cornhill, Limited, and Stockbridge, Limited, were paid on July 1st, at their offices, 1 Cornhill, London, E.C. These two companies are registered in Toronto and were formed at the end of last year to deal with real estate in the eastern part of Toronto.

"Those who have been in Calgary lately," says the Wall Street Journal, "received the impression that every unattached person in the United States and Canada had descended upon the town with the intention of getting rich or knowing the reason why. Be this as it may, there is no doubt that the strike has excited world wide interest as experts from almost every section of the globe have visited the Calgary field. No one has any office hours. Business is done at all times and places. The boom may blow out a fuse any day; no one knows. But in the meantime Calgary is having the time of its young life."

REPAYMENT OF MUNICIPAL LOANS

Instalment Method Explained—Lender's Objection to This System

In a valuable paper read before the convention of Saskatchewan urban municipalities at Moose Jaw recently, Mr. S. P. Grosch, of the provincial local government board, discussed municipal sinking funds. He outlined the more essential features of the instalment, the annuity and the sinking fund methods.

According to the instalment method the loan is repaid to the lender by equal annual instalments of principal; interest is at the same time paid on the balance of the loan unpaid. The amount of the annual payments gradually decreases, being somewhat large during the earlier periods and comparatively small during the later periods of the loan, the reason being that the interest charges decrease in proportion as the principal is reduced. This method is merely an arithmetical calculation, involving only a question of simple interest on the amount of the loan from time to time remaining unpaid.

Lender's Objection to Instalments.

Under this method a loan of $10,000 repayable in ten years, bearing interest at 6 per cent., would be repayable in the years indicated as follows:—

Year.	Principal.	Interest.	Total.
1	$1,000	$600	$1,600
5	1,000	360	1,360
10	1,000	60	1,060

The lender's objection to this method is that he is compelled to accept annually a portion of the principal, and that he is therefore obliged to repeatedly reinvest comparatively small amounts.

The ratepayer's objection is that when expensive works are undertaken involving a large loan, the burden of taxation during the earlier periods of the loan is so heavy as to make the undertaking almost prohibitive, while if the burden were equally distributed during the entire period of the loan, it would make the undertaking feasible. This is especially applicable in the case of newly organized districts where the ratepayers are usually comparatively few in number and least able to pay during the earlier period of the loan. This objection cannot apply with equal force to small loans, and on the principle that the burden should be regulated as nearly as may be according to the benefits derived, it would be well in many instances to adopt this method, as it occasionally happens that the ratepayers derive a special benefit from the expenditure while it lasts.

Cost of Maintenance.

A more valid reason for the adoption of this method is that where the work is of such a nature that the cost of maintenance is likely to be an increasing one during the later periods of the loan, or that an alteration or reconstruction of the works may be necessary, or if the benefits to be derived from the works are likely to diminish during the period of the loan, then the instalment method would appear to be very applicable indeed, unless market conditions are such that by adopting it it would compel a local authority to make too great a sacrifice in the price, which, however, is seldom or ever the case, and particularly not where comparatively small loans are negotiated.

Owing to the equal annual repayment of the principal from the commencement of the loan, this method calls for the least amount of money to be raised by way of taxes during the period of the loan.

(To be continued.)

The capital of the Netherlands Transatlantic Mortgage Company, Winnipeg, has been increased by 250,000 florins, which was subscribed three times over. There has been also an issue of 500,000 florins of 5 per cent. debentures, which was almost entirely taken up by the public. The company's European office is at Amsterdam and the Canadian headquarters at Winnipeg. Mr. I. D. Fortuyn is managing director.

DEBENTURES FOR SALE

$1,155,950.17.

CITY OF OTTAWA.

DEBENTURES FOR SALE.

Tenders addressed to "The Chairman of the Board of Control," and marked "Tenders for Debentures," will be received by the City of Ottawa until 3 p.m., on Friday, the 14th August, 1914, for the purchase of $35,379.06 10-year debentures; $550,571.11 20-year debentures; $570,000.00 30-year debentures.

They are all a liability of the City at large, $965,950.17 bear interest at 4½ per cent. and $190,000 bear interest at 5 per cent.

Interest payable 1st January and 1st July.

Two separate tenders will be received, one for $190,000 30-year debentures, and the other for the remainder of the debentures $965,950.17.

All tenders must be on the official form. The tender for the $190,000 debentures must be accompanied with an accepted cheque for $1,000, and the tender for the $965,950.17 debentures with an accepted cheque for $5,000.

Accrued interest from the 1st of July, 1914, must be paid in addition to price tendered.

The debentures will be made payable in Ottawa, New York or London at the option of the purchaser, and in denominations to suit.

Delivery of the debentures can be made within one month if required.

The highest or any tender not necessarily accepted.

Full particulars, together with further conditions, and official forms of tenders can be obtained on application to the City Treasurer.

(Signed), TAYLOR McVEITY,
Mayor.

DEBENTURES FOR SALE

RURAL MUNICIPALITY OF WALLACE

Sealed Tenders will be received by the undersigned up to Friday, August 7th, 1914, at 6 o'clock p.m., for the purchase of $2,000 five per cent. Telephone Debentures, payable in 20 years. Redemption provided by sinking fund interest payable annually.

WILLIAM WHITEFORD,
Clerk.

Virden, Man., July 15th, 1914.

TENDERS FOR WATERWORKS AND SEWER DEBENTURES.

TOWN OF NEEPAWA, MAN.

Tenders, addressed to the undersigned, will be received up to Thursday, August 27th, 1914, for the purchase of $[illegible] waterworks and sewer debentures of Town of Neepawa as follows:—

Extension of waterworks system	$2,[illegible].24
Frontage tax sewers	4,[illegible]
Total	$7,[illegible]

The debentures bear interest at the rate of SIX per cent. per annum, payable half-yearly on the first days of May and November, repayable thirty years from date of issue, and have Interest Coupons attached.

The highest or any tender not necessarily accepted.

J. W. BRADLEY,
Secretary-Treasurer.

Neepawa, Manitoba.

TENDERS WANTED

County of Welland: Local Improvement [illegible] Road Debentures, $[illegible], 5 per cent. dated 1st June, 1914. Interest payable [illegible] 1st July.

Tenders will be received up to and including [illegible] June, 1914. Particulars may be had from the undersigned.

ROBERT COOPER,
Clerk, County of Welland.

TOWN OF VIRDEN

PROVINCE OF MANITOBA

Sealed Tenders addressed to the undersigned and marked "Tenders for Debentures," will be received up to 8 o'clock p.m., August 7th, 1914, for the following debentures:—

$10,000 Municipal Building Debentures—Payable April 1st, 19[illegible], 20 equal annual payments of Principal and Interest, 5 per cent.

$7,000 Skating Rink Debentures—Payable December 30th, 1914, 20 equal annual payments of Principal and Interest, 5 per cent.

Offers to be payable nett at the Union Bank of Canada, Virden, Man.

The highest or any tender not necessarily accepted.

Further particulars may be obtained from the undersigned.

W. WHITEFORD,
Sec.-Treas. Town of Virden.

LEGAL NOTICE

Nash Temperature Control, Limited.

Public Notice is hereby given that under the First Part of chapter 79 of the Revised Statutes of Canada, 1906, known as "The Companies Act," letters patent have been issued under the Seal of the Secretary of State of Canada, bearing date the 8th day of July, 1914, incorporating William Marshall, consulting engineer; George Patrick Reid, bond broker; Nathan Edward Nash, mechanical engineer; Florence Moore Dillon and Nina McFarlane, stenographers, all of the City of Toronto, in the Province of Ontario, for the following purposes, viz.:—(a) To manufacture, buy, sell and deal in steam, water, gas and electrical specialties, including thermostats and other machines and appliances for automatic control of steam, water, gas and electricity and for regulating temperature, pressure and energy; (b) To acquire by purchase or otherwise from the said Nathan Edward Nash all patents granted or to be granted to him in Canada for all inventions made or to be made by him of thermostats and other machines and appliances for automatic control and regulation of temperature, pressure and energy, and for all improvements thereon and to grant licenses for the use of, sell and dispose of the same; (c) To pay for the said patents or any property acquired by the company wholly or partly by royalties or by the issue of paid up and non-assessable shares, bonds, debentures or other securities of the company; (d) To pay out of the funds of the company all costs and expenses incurred in the incorporation and organization of the company and in the licensing of same in any Province of Canada and in the sale of shares; (e) To do all other things which may be incidental or conducive to the attainment of the said purposes. The operations of the company to be carried on throughout the Dominion of Canada and elsewhere by the name of "Nash Temperature Control, Limited," with a capital stock of forty thousand dollars, divided into 400 shares of one hundred dollars each, and the chief place of business of the said company to be at the City of Toronto, in the Province of Ontario.

Dated at the office of the Secretary of State of Canada, this [illegible] day of July, 1914.

THOMAS MULVEY, Under-Secretary of State.

[illegible] Workmen's Compensation [illegible] a charge on [illegible] $[illegible] for [illegible] against the city [illegible] under the Workmen's Compensation Act, [illegible] were received, the ac-[illegible] ranging from $5.4[illegible] up to [illegible]

Depression and its Causes

SOME reasons why we should welcome slumps such as that in which Canada and other countries are participating to-day. Cold douche given to enthusiastic hopes of investors.

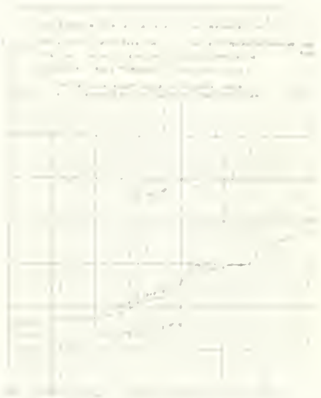
By STEPHEN HUTCHINGS.

SLUMPS [illegible] and [illegible] should [illegible] rather than [illegible] occurrence. But we are not a logical people, and [illegible] it ill-disposes us to reason out coldly things that touch our pockets. Instead, we are accustomed to deprecate [illegible] in mild despair and to suffer their [illegible] in a spirit of martyrdom, much the same as we suffer the [illegible] of a poor relation. This simply proves how egregiously stupid we are. Did we pause to reflect we should recognize that trade depression is a [illegible] law of economics and as big a factor in the world's industrial system as sleep is in its natural life. None of us [illegible] rather consciously. We labor and take our rest without [illegible]; sleep comes unasked, except to insomnia victims, and try how we may we cannot dispute nature's authority.

So it is in our economic life. We [illegible] forward feverishly, constructing and producing, oblivious to all else in the heat of it, the while prodigally expending credit, which is the vital economic force, until the economic machine flags and at last demands a rest. During that period of abeyance the equilibrium is restored, fresh energy is gathered, and the economic [illegible] speeds up until once more it revolves to the [illegible] exhaustion and another period of so-called depression sets in. Thus we get "booms" and "slumps" in cycles, timed and measured according to the amount of energy stored and the rate of its expenditure, and [illegible] as inevitably as day and night.

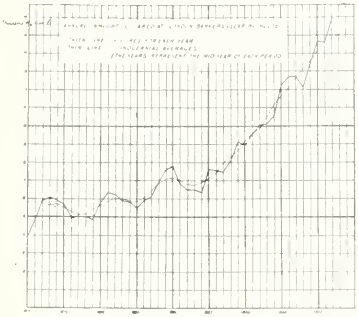
Let us see how it works. Throughout the world there is a constant creation of capital, i.e., [illegible] and of new labor in the shape of young adult [illegible] ripening for economic use. In the last decade the new productive energy, which must be employed, [illegible] an outlet in the mines, factories, shops, [illegible] machinery, warehouses, and the whole gamut of [illegible] units, simultaneously with the progress of [illegible] formation in the interests of [illegible]. Modern methods have called for the [illegible] machinery, the multiplication of [illegible] raw material, larger factories and [illegible] way systems and ships, and the [illegible] of labor-saving devices. [illegible] at such a fever heat that the [illegible] now employed may be said to [illegible] tically out of the savings of the last few years.

This transformation in the [illegible] economic structure has absorbed a great deal of the new capital and labor, but the bulk of it has been diverted into [illegible] exploited countries. The [illegible] resources of the [illegible] of Brazil, the vast [illegible] pampas of Argentina, the varied and huge potentialities of Canada, have all been tapped and enlisted in the world's [illegible] of wealth. These and other lands have provided additional markets for the manufacturers in their need of [illegible].



[illegible] proved that [illegible] of production is to [illegible]

Any man may practise the theory himself. Let him buy a piano, for instance, and endeavor to turn it over to somebody else at the same price. He will find quite a formidable gulf between supply and demand. It is always easier to buy than to sell. Therefore, every period of activity and expansion must sooner or later experience a slowing down in the machinery of production in order to give the markets time to improve their absorptive capacity, which, of necessity, will increase concurrently with the wealth of the world, the higher standard of comfort for labor and the more lavish luxuries of the rich. If these setbacks, which round up, as it were, every period of activity, failed to occur, a most phenomenal and truly incredible situation would arise. We have agreed that excess of production over consumption is what promotes the symptoms of depression. Continued production at such a stage would aggravate them. Let us assume that a powerful banking combine were willing and mad enough to lend more money for still larger constructive works. What would be the result? It would provide an outlet for the product of certain industries, and it might be possible for a time, by reason of the comparatively free circulation of money in wages, to believe in a sort of shadow-show of prosperity. But so soon as these new works began to produce, which, presumably, we should expect them to do at some time or another, a calamitous slump would intervene, work would be suspended wholesale, and we should have a spell of depression over a long period such as would justify all our grimaces.



The world-wide depression of 1908-9, caused by over-production, was marked by a surplus of both capital and labor in England, which proved that markets were insufficient to absorb the goods they could produce. The same applies to the existing depression, but to comprehend the true inwardness of the situation we have to look a great deal deeper than at these facial facts. Meantime, we will examine it in an endeavor to see how it affects Canada. There is no doubt as to the sentiments of British investors to this country, and a great deal of the journalistic lucubrations and the effusions of amateur litterateurs in the banking and business world on both sides of the Pond are true. Many adverse factors have combined to throw a cold douche over the enthusiastic hopes of British investors, and the recent slump in Canadian Pacifics will accentuate their diffidence. The securities of this line converted London into a roaring camp three years ago, and country investors sent along a fair amount of money for the gamble. Those who lost will not forget immediately. The unfortunate issue a while back of the Canadian Northern, which purported to carry the guarantee of the Federal government, was severely handled in the Press and made another sore point. The newspapers also levelled critical shafts at the borrowings of embryo municipalities, who toed the line, cheek by jowl with the big towns, and asked for money to lay out parks. The difficulties of certain companies and the ill-success of the Grand Trunk were also reproofs to those who considered all things Canadian certain of success. But in spite of these there is still plenty of loanable capital in the Old Country waiting for sound, well-financed and judiciously-floated Canadian enterprises. As it is, Canada has already had 193,853,000 dollars in the last six months. Here are the totals in pounds sterling, together with the corresponding half-years of 1913 and 1912:—

Destination of New Capital.

	First-half of year 1912.	First-half of year 1913.	First-half of year 1914.
United Kingdom—	£	£	£
Total	24,159,400	20,324,400	24,909,700
British Possessions—			
Australasia	4,201,900	11,996,400	18,796,200
Canada	**14,978,600**	**20,437,400**	**38,770,600**
India and Ceylon	3,225,500	3,457,000	3,173,100
South Africa ...	2,695,100	5,439,100	5,122,900
Other British Possessions ...	2,831,100	1,672,700	4,389,800
	27,932,200	43,002,600	70,252,600
Foreign countries..	58,252,000	57,032,600	57,187,0[illegible]
Total for first half-year	110,343,600	120,359,600	152,349,300

These figures show very favorably in comparison with those of previous corresponding periods, and, regarded superficially as concrete improvement, they tend to induce a feeling of satisfaction which more abstract speculation fails to justify. Comparison is not the sole criterion when based simply upon corresponding figures. To discover what progress has been made we have to consider the world's increased wealth and population and their greater needs. Canada has a greater population than in the two corresponding periods, and the round sum of £38,770,000 may not represent a fair proportion of the increased lending power of the United Kingdom. Moreover, the amount was lent in large blocks, mainly on account of railways and municipalities, and precious little of it was for general industrial enterprise, which is in vital need of capital.

	World's population.	World's commerce.	Gold production for the decade ending at the year shown.
		£	£
1860 ...	1,205,000,000	1,510,000,000	278,000,000
1870	1,310,000,000	2,221,000,000	263,000,000
1880	1,439,000,000	3,075,000,000	240,000,000
1890	1,488,000,000	3,050,000,000	221,000,000
1900	1,543,000,000	4,189,000,000	438,000,000
1906 . ..	1,570,000,000	5,712,000,000	646,000,000
1910	1,610,000,000	7,007,000,000	788,000,000
1911	1,[illegible]30,000,000	7,373,000,000	829,000,000

This table, showing the increase in the world's development of population, commerce and gold production to 1911 enables the reader to form a shrewd idea of the compound growth in wealth and people. The estimates of the national wealth of the United Kingdom have risen, according to the Economist, from £10,663,000,000 in 1895 to £15,000,000,000 in 1913, and the Statist estimated that the national income in 1912 was £2,250,000,000.

What gives the depression so bad an aspect is the fact that Canada was not producing during the late boom period. A large section merely gambled, which means changing money from pocket to pocket, and virtually held production in abeyance. Those who made fortunes out of real estate have not put it into land or mines. The bulk of their profits was put into securities purchased, no doubt, at good premiums. For instance, take Canadian Pacific Railway stock. The purchase money does not go into rails, locomotives, rolling stock, etc.; it does not reach the company at all, and the amount over par paid for the stock represents just so much of unearned increment put into the pockets of previous sellers. Unearned increment is the curse of a country like Canada in that the effort to get it withholds the energies of some of the people from their proper function of production. The Alberta oil gamble will not do us much good. It is a mischievous thing, and implies a quantity of economic waste which the country cannot afford. Oil has been proved, but its exploitation should be taken out of the hands of share-pushing Tom, Dick and Harry, who think more of getting rid of worthless paper than they do of getting oil. Unfortunately, the aftermath will accentuate the depression and inflict a sharp penalty on the recklessness of those who plunged where wise men refused to tread.

As the Mother Country is the market for Canadian issues, we must peep under the surface of things there to get an idea of prevailing conditions. I have enumerated above some of the factors in recent Canadian financial history which are likely to have given rise to unfavorable sentiment. In some respects the fault belongs to Canada. Lenders are disinclined to accept anything of a speculative nature, which is attributable to politics more than to other causes. The Irish question is very disturbing, and until it is settled money will not flow freely into ventures having the least element of a speculative character. But important as the Irish question may be, it does not satisfactorily explain the situation. We may, however, get the secret by travelling back into European politics. This gives us a sequence of incidents immediately detrimental to money and trade. Bulgaria gave rise to the uneasiness in 1908 when she declared her independence. The consequent stir in Europe, coming hard upon the American panic and increasing depression in trade, had remarkably far-reaching effects. Markets never seem to have recovered their composure, and what incipient tendencies they may have shown in that direction were ruthlessly dissipated by the frequent tension produced by the political activity of Germany, Italy and Austria. The high feeling nearly culminated during the Balkan war in a general conflagration in Europe.

This is not the place in which to vent Germanophobe sentiments, but, excepting the pacifists, who [illegible] Europe altruistically and who discount political [illegible], all students of international politics are [illegible] of the general aims of the governing classes in Prussia and Austria, more especially the former. Machiavelli and his apostles, Frederick, the so-called Great, and Bismarck, are gone, but their creed remains with [illegible] of faith impaired. The other chancelleries of [illegible] are not incognisant of the ambitions of the Pan-German party, and the Emperor and his friends [illegible] passionate efforts to maintain, and [illegible] to increase the numerical strength [illegible] overtake it on the other.

The subject [illegible] brought out for cursory consideration [illegible] the [illegible] details that [illegible] irrelevant to the pages of a Canadian financial journal, but, if we are to understand the trend of money, we must [illegible] appreciate the importance of these political [illegible] which bear directly upon the world's money market and the possible supplies of money upon which Canada must hope to draw. What unrest exists is increased by [illegible] immediate events in South Europe. The Austro-Servian question and the Austro-Italian quarrel threaten to cause the break-up of the Triple Alliance, which will inflict a grave hurt upon the business world in future.

I cannot go into these questions now, but I would point to their financial result. At present Europe spends something like 300,000,000 dollars a month on armaments and military preparations. The significance of it is shown in the fact that in ten years the United States spent that sum on the Panama Canal. Moreover, more than five million men, the flower of the able-bodied population, are permanently withdrawn from economic production. These expenditures are growing, and promise to grow still further. Russia, who needs all the money she can get for development and education, proposes to spend 3,750,000,000 dollars on military waste in the next five years. What does all this portend in increased taxation and anxiety? In England there is a big deficit, which the last Budget, unsavoury to Liberals and Conservatives alike, and the object of bitter criticism from the Liberal side of the House, is specially devised to meet. The following table speaks for itself:

United Kingdom—Growth of Imperial Expenditure Per Head of Total Population and Per Head of Male Population Aged 25 Years and Over (1880-81 = 100).

	Per head of total population	Per head of male population aged 25 years and over
1880-81	100	100
1882-83	106	100
1887-88	103	101
1892-93	110	107
1897-98	121	114
*1902-03	190	184
1907-08	140	133
1912-13	170	155
1913-14	180	160
†1914-15	195	167

---

* Expenditure inflated owing to the war in South Africa.

† On basis of estimates for 1914-15.

All of these factors are complementary to the present depression. Quite apart from the economic waste involved in the Balkan war, which [illegible] much further than the direct and indirect expenditure on material, men and [illegible], and the [illegible] in the maintenance on the part of many [illegible] among the Great Powers, the [illegible] burden of taxation in the United Kingdom [illegible] to act [illegible]. It is [illegible] to the sentiment in European politics [illegible] the [illegible] of Canada [illegible] of money for [illegible] and other new [illegible], but I doubt that it will be released until the present [illegible] of Europe's politics give place definitely to [illegible].

WORLD'S MARKETS TUMBLE AT COMPLICATIONS

Stock and Grain Exchanges Reflect Fears of Big War—Canadian Stocks Misbehave—Business Community Have Good Reason to Keep Friendly With Commonsense.

THE gravity of the European situation is obvious. As the statesmen of Europe have been unable to prevent war, it must be hoped now that their efforts to localize it will meet with success. When nations jealously are watching two disputants and considering their treaty engagements, the danger of general participation is pronounced. The diplomats of Europe recognize more to-day than ever the terrible waste, in many directions, and heavy cost of warfare. Diplomacy has shown its strength in recent years and has an unique opportunity now. A war in Europe will make its effects felt financially and commercially in every village, town and city in Canada.

"He who sups with the devil has need of a long spoon." He who has dabbled in the stock markets of late has had need of a long purse. Of all institutions subject to cold shivers at the will of no one in particular, and everybody in general, the average stock exchange occupies first position. The stock market is to some extent a guide to financial conditions, but not entirely. A man will walk into a wholesale house, and when undergoing the usual temptation to buy, he will remark: "Stocks are down, you know," nodding his head wisely. Ask him what stocks he holds, and the reply may be: "None." Too many people talk of the stock markets as they do of the weather. They know little concerning the fundamental conditions of either, and balance this lack of knowledge with much chatter. The stock exchange is a business institution, where securities are bought and sold. If shareholders care to throw their holdings into the cauldron of manipulation or reckless selling at any and every word of command, at the sign of international trouble, or at anything else, it is their own business. But such actions should not upset the equilibrium of the entire business community.

When a man holds a block of stock and the price is falling at a rapid rate, he hastens to sell. Multiply the example and there is panic. Those who have stocks on margin aggravate the affair. An orator, of sound sense and logic, might have stood on the Montreal and Toronto exchange desks and given good reasons why good stocks should not be sacrificed at the altar of nervousness. The brokers would have listened only to his text and then dashed again into the fury of selling. The extent of that fury is gauged roughly by the fact that at Toronto on Tuesday one could have bought in the excitement the same stock from three different brokers at three different prices. As the logical orator would not have been given a chance, and as the mental attitude of the stock exchange refused to absorb any logic, the president of the institution took counsel with his committee and closed the exchange. Thus he did by brute force what the orator would have failed to do by argument.

Despite the stock exchange panic, the farmers continue to grow wheat.

CANADIAN STOCK EXCHANGES CLOSED

Everybody Wanted to Sell and Prices Made Alarming Slumps

As a result of the European situation and other disturbing factors, the international stock markets this week collapsed. In London, Vienna, Paris, Berlin, New York, Montreal and Toronto, and at other points, stock and grain markets became demoralized. Everybody wanted to sell stocks and their prices slid down at a record rate. Wheat prices went up. Canadian Pacific stock, which has suffered in all markets of late more than any, declined twenty points on Tuesday. On that day, the two Canadian exchanges followed the example set by the Vienna Bourse on the previous Saturday, and closed their doors until further notice. Montreal did this after the morning session and Toronto closed fourteen minutes after the afternoon session had commenced. The action was required to prevent "the ruination of market values," and has been defended by the stock exchange officials and by bankers. There are some, however, who are inclined to believe that the better course ultimately would have been to let things take their natural course. "I like the London way," said an investor to *The Monetary Times*. "Let us take our medicine when it is prescribed. We must have it some time." The following are some comments on the Canadian stock exchange closing:

"Mr. D. R. Wilkie, president of the Canadian Bankers' Association, said:—"There is no occasion for alarm. The [illegible] are the foreign. Canadian securities [illegible]. Conditions in Europe are far from normal, for which Canada is not to blame; further, Canadians do not take the lead, but simply follow. The Exchange was simply closed to give the members an opportunity of locating themselves in view of what has been happening recently."

President E. R. Freeland, of the Toronto Stock Exchange, said:—"The closing of the exchange was done purely as a matter of defence for both brokers and their clients. Our markets were deluged with selling orders from Montreal, as all their selling came here. When I saw how things were going I drew the committee aside and held a consultation, and we decided it would be best to close and give the brokers and all concerned a breathing spell."

Mr. F. Gordon Osler, ex-president of the Toronto Stock Exchange, said:—"It was impossible to trade on the market. Prices were not stationary for a second and the only thing to do was to close."

For Good of the Country.

Mr. John Pitblado, secretary-treasurer of the Montreal Stock Exchange, said:—"The prestige of the exchange was sacrificed for the good of the country. Never in the history of the local exchange did the threat of a general European war arise and the situation had to be met promptly and decisively. We did not propose to allow the Montreal Exchange to be made the dumping ground for the European exchanges, so closed down to await developments. Local houses are in a good position to meet all emergencies. Rumors which have been current on the street to the effect that a few firms were in an unsound financial condition are unfounded. I personally investigated one rumor to this effect last week and learned that the firm in question was not only secure, but in a position to [illegible] should an emergency arise.

"This afternoon the members of the exchange committee called on representatives of all the leading banks and received every assurance of support and every expression of approval of their attitude in closing the exchange. The members of the exchange were themselves practically unanimous in favor of the action. Meanwhile everything is in good shape."

The proverbial biscuit goes this week to the Toronto man who said the stock market "is not demoralized."

Anyway, these troubles will give Canada a chance to get back to the land and do some real, hard, productive work, instead of speculative recreation.

WHAT THE GRAIN MARKETS THOUGHT

The view of the grain markets was that as Russia is one of the largest wheat-producing countries in the world, and in event of her becoming involved in a war with Austria on the southwest and Germany on the west, the prospects would be that her wheat shipments, either via the Mediterranean or the Baltic, would be discontinued altogether. Added to this was the fear that both harvest and shipping operations of all the continental countries concerned would be more or less retarded if not completely blockaded. Advances of from four to nine cents per bushel occurred in the market. Chicago July wheat closed on Tuesday 8½ cents higher than on Monday, and September options made a net gain of nine cents. In Winnipeg July wheat advanced 4½ cents and September 6½ cents per bushel.

SEVEN YEARS AGO

A delegation from the Montreal Stock Exchange interviewed on Tuesday afternoon officials of the leading banks who are naturally interested in the market break, owing to the large amounts which are out in call loans on Canadian securities. They found the bankers entirely in sympathy with the decision to close the exchange.

Back to October, 1907, we must go in Canada for a serious conference between bankers and stockbrokers, such as was held in Toronto and Montreal this week. The Montreal Stock Exchange called a meeting to consider the situation which then had become serious, several stocks having declined below their previous lowest level, and the panic being such that there was practically no support whatever. The committee decided to interview the banks and place the situation before them as a precautionary measure. The interview was satisfactory and it was stated that the banks were prepared to come to the relief of the market with a million dollars if necessary. On this particular October day stock prices had broken to very low figures, as the following list shows:—

	October, 1906.		October 15, 1907.	
Canadian Pacific Railway	17[illegible]	[illegible]	15[illegible]	[illegible]
Montreal Street Railway	254	[illegible]	[illegible]	[illegible]
Toronto Street Railway	114	11[illegible]	[illegible]	[illegible]
Detroit United	[illegible]	[illegible]	[illegible]	[illegible]
Toledo	[illegible]	[illegible]	[illegible]	[illegible]
"Scotia"	61[illegible]	70	45	[illegible]
Dominion Iron, Common	26[illegible]	[illegible]	[illegible]	[illegible]
Dominion Iron, Preferred	76	[illegible]	[illegible]	[illegible]
Montreal Power	95¼	[illegible]	[illegible]	[illegible]
Soo Railway	147	[illegible]	[illegible]	[illegible]
Dominion Coal, Common	61	[illegible]	[illegible]	[illegible]
R. & O. Nav. Co.	80	[illegible]	[illegible]	[illegible]
Rio	[illegible]	[illegible]	[illegible]	[illegible]
MacKay, Common	[illegible]	[illegible]	[illegible]	[illegible]
MacKay, Preferred	[illegible]	[illegible]	[illegible]	[illegible]
Iron Bonds	[illegible]	[illegible]	[illegible]	[illegible]
Rio Bonds	[illegible]	76[illegible]	[illegible]	[illegible]

Canadian Pacific stock on the break has [illegible] 20 points, to about the same low point [illegible].

It requires nerve to buy stocks [illegible] principle is the [illegible] hats in winter.

SIZE OF CALL LOANS

The [illegible] interest in the stock market [illegible]. By June, these loans in Canada [illegible], and abroad, $[illegible]. [illegible] as follows:—

	Call loans not exceeding thirty days in Canada on stocks, debentures and bonds.	Call and short (not exceeding thirty days) loans elsewhere than in Canada.
Bank of Montreal		$ [illegible]
Quebec Bank	$ [illegible]	....
Bank of Nova Scotia	[illegible]	[illegible]
Bank of British North America	[illegible]	[illegible]57,131
Bank of Toronto	[illegible]	.....
Molsons Bank	[illegible]	.
Banque Nationale	[illegible]	[illegible]
Merchants Bank of Canada	[illegible]	[illegible]455
Banque Provinciale du Canada	[illegible]	....
Union Bank of Canada	[illegible]	[illegible]
Canadian Bank of Commerce	[illegible]	[illegible]
Royal Bank of Canada	[illegible]	[illegible]
Dominion Bank	[illegible]	[illegible]
Bank of Hamilton	[illegible]	
Standard Bank of Canada	[illegible]	
Banque d'Hochelaga	[illegible]	
Bank of Ottawa	[illegible]	
Imperial Bank of Canada	4,057,[illegible]	
Metropolitan Bank	[illegible]	
Home Bank of Canada	[illegible]	
Northern Crown Bank	[illegible]	
Sterling Bank of Canada	[illegible]	
Bank of Vancouver	[illegible]	
Weyburn Security Bank		
Total	$[illegible]	$[illegible]120,167

The Bank of Commerce has $[illegible], the largest amount on call in Canada, while the Bank of Montreal has $[illegible] on call elsewhere, mostly in New York and London.

BUYING STOCKS ON MARGIN

Stock brokers have been busy calling upon clients to furnish greater margins. Purchase of stocks on margin is a simple transaction [illegible]. One of the chief reasons for closing the Canadian stock exchanges until further notice was to give holders of stocks on margin an opportunity to protect their interests.

In the [illegible] "Investment and Speculation," [illegible] described as follows:—

[illegible] Let us suppose that the customer [illegible] In the [illegible]

Chartered Banks' Statement to the

T. C. BOVILLE,

Deputy Minister of Finance

JUNE BANK STATEMENT ENCOURAGING

Total Deposits have come back to the Billion Dollar Mark—Loans to Municipalities have Increased a little and Foreign Call Loans Heavily.

	June, 1913.	May, 1914.	June, 1914.	Year's inc. or dec.	Month's inc. or dec.
Deposits on demand	$362,769,928	$340,748,488	$355,006,229	— 2.2	+ 4.4
Deposits after notice	622,928,969	663,945,753	663,650,230	+ 6.4	— 0.04
*Current loans in Canada	899,260,009	872,152,263	875,536,999	— 2.7	+ 0.3
Loans to municipalities	....	33,689,577	37,260,571	....	+12.1
Current loans elsewhere	36,894,681	51,812,875	46,186,854	+24.3	— 9.8
Call loans in Canada	68,642,377	67,210,504	67,401,484	— 1.4	+ 0.3
Call loans elsewhere	89,363,520	129,897,328	137,120,167	+53.9	+ 5.3
Circulation	105,697,629	97,760,921	99,138,029	— 7.6	+ 2.06

*Including loans to municipalities.

The above are the principal changes in the accounts of the chartered banks of Canada during the month of June, together with the changes that have occurred in the twelve months period since June, 1913. Taken as a whole, the June bank statement is a document which should inject a little faith and confidence into the Canadian situation—and that has been sadly lacking in some quarters during the past few weeks. The bank statement is a reliable guide to the soundness of things in general and the June document reveals the fact that the banking position is strong and better than that of last month, while it also shows that the bankers have matters well in hand, being prepared also for the financing of the crop movement and for autumn trade generally.

Demand deposits have increased by more than 4 per cent. during the month and after notice deposits, those oft-mentioned savings of the people, have declined only $300,000, or in percentage figures, 0.04. This is gratifying and would seem to indicate that the people are not drawing upon their savings to keep up mortgage and similar payments and to make both ends meet in these times of trade and financial depression. The total deposits, too, for the first time this year, exceed one billion dollars. This record was made last year but a gradual decline in deposits for many months past has kept them below that figure until last June.

Loans to Municipalities.

Current loans in Canada, including municipal loans (for the sake of comparison with the figures of last year), increased about $3,500,000, practically the whole of the gain going to the municipalities. Commercial credit, therefore, was not extended during June but remained at about the same figure as in May. Call loans in Canada increased slightly, the percentage gain being 0.3, call loans elsewhere than in Canada appreciating approximately $7,000,000 or 5.3 per cent. Circulation was 2.06 larger in June than in May, but was about $6,000,000 or 7.6 per cent. less than that this time last year. The crop movement was nearer at hand in that year than apparently it is this year.

The following table shows the trend of the Canadian loans account for the past thirteen months:—

Loans	Current in Canada.	Call in Canada.
1913—June	$899,260,009	$68,642,377
July	[illegible]	67,091,255
August	899,132,804	[illegible]
September	903,717,013	[illegible]
October	900,159,736	71,118,255
November	865,888,832	[illegible]
December	[illegible]	[illegible]
1914—January	[illegible]	[illegible]
February	[illegible]	[illegible]
March	[illegible]	[illegible]
April	[illegible]	[illegible]
May	872,152,263	67,210,504
June	875,536,999	67,401,484

Expansion in Loans.

[illegible] in Canada in June were greater, at $875, [illegible] the past eight [illegible] figure [illegible] Last month, however, [illegible] the whole of the [illegible] business life not getting any of the gain. The highest point in the current loans account during the past thirteen months, was reached in September when the amount was $903,717,013. The crop movement affects this account.

As to call loans, they have remained above sixty and under seventy-five million dollars for the past year. Last month they gained about $200,000 or 0.3 per cent., leaving the account, for all practical purposes, unchanged.

The following table shows the expansion of loans at home and abroad, during the past four years:—

June.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1910	$649,145,920	$38,171,443	$61,598,958	$130,173,902
1911	717,860,380	33,557,617	61,507,268	97,865,400
1912	841,940,089	34,254,560	68,701,855	120,569,812
1913	899,260,009	36,894,681	68,642,377	89,363,520
1914	875,536,999	46,186,854	67,401,484	137,120,167

Both current and call loans out of Canada increased last month as compared with a year ago, the former gaining nine million dollars and the latter forty-eight million dollars. The heavy Canadian flotations in London during the past month or so may have helped to increase the call loans abroad.

The following table shows the course of domestic deposit accounts for the past thirteen months:—

	On demand.	After notice.
1913—June	$362,769,928	$622,928,969
July	356,585,106	621,347,388
August	358,321,025	619,032,847
September	381,737,513	621,249,585
October	380,856,507	621,511,207
November	384,486,046	625,803,150
December	381,375,509	624,692,326
1914—January	330,811,339	635,135,955
February	337,516,505	640,927,130
March	345,500,042	646,143,604
April	350,515,903	653,679,223
May	340,748,488	663,945,753
June	355,006,229	663,650,230

How the Deposits Stand.

Demand deposits were higher in June than in any month during the past six, the figure in December, 1913, being $381,375,509. The most striking change of the past thirteen months perhaps has been in the after notice deposits. Until May last, they had remained at comparatively low figures, as the above table shows. In that month, they increased from 653 millions to 663 millions. In June, they remained at about that amount. In August last year, these deposits were as low as $619,000,000.

The deposits record for the past five years for the month of June is given in the following table compiled by *The Monetary Times*:—

June	On demand.	After notice.	Total.
1910	$[illegible]	$[illegible]	$ 707,849,503
1911	[illegible]	[illegible]	874,672,407
1912	[illegible]	[illegible]	1,004,817,876
1913	[illegible]	[illegible]	985,698,807
1914	[illegible]	[illegible]	1,018,656,459

Both demand and after notice deposits have made fairly consistent gains [illegible] years, as the above figures show. The [illegible] in June [illegible] than in June, 1912, the year of abnormal activity.

Those who are looking for signs and tokens of a more substantial national position, may find some comfort in the June bank statement. There are other important matters, however, than the banking position. The bankers of Canada, one of the most conservative, sane and useful factors in the country, have their house well in order. It is necessary now to encourage agricultural production, seeing that an extraordinarily active period of construction has come to an end. With that fact in view, the agricultural position needs attention. Production needs encouragement. The railroads recognize that, and the matter is being strongly impressed upon them by decreased earnings from week to week.

CANADIAN NORTHERN LOAN

Underwriters Take Seventy-nine Per Cent.—War is Blamed

(The following cable messages of the Canadian Associated Press and the Montreal Star are printed by special arrangement.)

CANADIAN NORTHERN LOAN

†London, July [illegible].—Messrs. Lazard Brothers are today offering for sale at a price of 94 per cent. [illegible] four per cent. guaranteed debenture stock of the Canadian Northern Railway, the same constituting a part of the total authorized amount of £[illegible],57[illegible]. The stock is unconditionally guaranteed as to principal and interest by the Government of the Dominion of Canada and will be registered at the company's office in London or at the option of the holder in Toronto. The company reserves the right to repay the stock in whole or in part on any interest date on three months' notice, and in case of partial redemption the stock to be redeemed will be ascertained by drawings. The proceeds of the issue are to be paid to the credit of the Minister of Finance and Receiver General of Canada, and will be applied towards the completion and equipment and betterment of the undertakings of the Canadian Northern System.

†London, July 27.—Only 21 per cent. of the Canadian Northern $15,000,000 loan has been taken up by the public. Commenting on its poor reception, the Daily News says such an unsatisfactory result is not to be wondered at. It is quite true that the debentures possess many attractions, their currency being for 20 years, the rate of interest [illegible], the price of the issue 94, with the unconditional guarantee of the Canadian Government. These would be great attractions in normal times, but times are not normal. War is in the air, and that explains why the [illegible] was not [illegible].

CRENFELL IN SACKCLOTH AND ASHES

†London, July [illegible].—Presiding at [illegible] of the Southern Alberta Land Company, A. M. Grenfell said there were few things more disagreeable to him under the circumstances in which he [illegible] to appear at a public meeting.

He could not [illegible] to all those who had [illegible] takes. The past year had [illegible] agement in Canada [illegible].

Negotiations which they had started with the Dominion Government had [illegible] by Sir William Plender [illegible] the hands of the shareholders.

He felt that he had done [illegible] to do to repair mistakes [illegible] organization of [illegible] their drastic reorganization.

---

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Calgary, Alta.—The city has renewed about £400,000 treasury bills for a period of six months and expiring with the end of the current year. These renewals were placed at a rate to the city of approximately 4 7-40 per cent.

Morrisburg, Ont.—A by-law to guarantee bonds of the Morrisburg and Ottawa Electric Railway Company will be voted upon August 17th.

Lethbridge, Alta.—The burgesses will vote on four money by-laws on August 4th.

Oak Bay District, B.C.—By-laws to raise $35,000 are being voted upon to-morrow (August 1st).

Vernon, B.C.—The city of Vernon will spend about $100,000 on improving its sewage system.

Calgary, Alta.—By-laws approximating $305,000 will be voted upon August 14th.

Fort William, Ont.—A by-law passed by the city of Fort William, providing for the issue of debentures to the amount of $50,000, for the purpose of purchasing a site for the National Tube Company, Limited, has been registered.

Carlyle, Sask.—The authorization of the provincial local government has been given to Carlyle to issue $6,000 6 per cent. 30-years debentures for completion of the waterworks contract, and $3,000 6 per cent. 15-year debentures for completion of electric light, heat and power works. The voting on these by-laws will take place on August 3rd.

North Bay, Ont.—Tenders will be received up to August 15th for $75,000 5 per cent. 10, 20 and 30 instalment debentures. W. K. P. Kennedy, town clerk. (Official advertisement appears on another page.)

London, Ont.—According to figures prepared by City Auditor Jewell, London's debenture indebtedness is $4,256,856. The limit of the borrowing powers of the city is $4,572,700, being 14 per cent. of the total assessment, $32,662,140. The amount of debentures issued is $6,269,286. Against this must be placed the sinking fund invested, totalling $427,081, leaving a balance of $5,842,204. This would exceed the borrowing powers of the city, but a large amount of debentures raised on utilities are not chargeable against the city itself. They are $540,000 for the waterworks, the property owners' share of local improvement debentures, amounting to $335,439, and $700,000 for the electrification of the London and Port Stanley Railway. This brings the actual indebtedness to the sum mentioned, $4,256,856. A large number of debentures have not been sold. They are as follows: Wharncliffe bridge, $20,000; Dennis loan, $25,000; new city hall, $125,000; Wharncliffe bridge, $5,000; London and Port Stanley Railway, $700,000; London West breakwater, $25,000; storm-water sewers, $400,000; public schools, $21,644; collegiate institute, $30,000; public schools, $134,800; waterworks, $28,000; electrical department, $148,000; courthouse, $37,000; hospital, $20,000.

Winnipeg Beach, Man.—A by-law to authorize the issuance of $15,000 debentures for drainage purposes will be voted upon August 11th.

Assiniboia Rural Municipality, Man.—A by-law providing for the issuance of $50,000 debentures will be voted upon August 8th.

Nova Scotia.—During the recent session of the Nova Scotia legislature the following cities, towns, etc., were authorized to borrow money:—

Halifax and Sydney's borrowings were given sanction, and also those of Kentville, Trenton, Wolfville, Sydney Mines, New Waterford and Truro, and the following towns for the purposes mentioned:—

Amherst, for fire purposes, remodelling town hall and extension of sewerage system.

Antigonish, for street improvements.

Bridgewater, for school purposes.

New Glasgow, for street improvements, school purposes, etc.

Westville, for armory site, etc.

Yarmouth, for sewers, etc.

[illegible]lsport, for electric lighting system.

[illegible], for purchase of land, etc.

Canso, for electric lighting purposes.

P[illegible], for completion of a dam.

[illegible] to the following municipalities were [illegible] district of Guysboro, county of Cape [illegible] Pictou, village of Mahone Bay, King's county.

Regina, Sask.—The following is a list of debenture applications granted by the Saskatchewan local government board and the applying treasurers:—

School Districts.—Swift Current, No. 167, $60,000. J. D. Dodds, Swift Current. Johnston Lake, S.D. No 3261, $1,200. H. F. Eklund, Moss Bank. Anerley, S.D. No. 2277, $2,000. C. D. Coogan, Anerley. Royal George, S.D. No. 3239, $1,600. Fred. McIntyre, Caron. Pinto River, S.D. No. 3281, $2,000. A. W Murray, Aneroid. Deutcher, S.D. No. 2948, $1,700. H. H. Michael, Unity. Canterbury, S.D. No. 3345, $1,400. C. H. Fisher, Dysart. Abbey, S.D. No 3284, $2,400. Arthur Leggett, Abbey. Four-Mile Lake, S.D. No. 3286, $1,600. W. H. Evans, Kelfield. Echo, S.D. No. 455, $1,200. H. J. Veal, Marchwell. Yorkton, S.D. No. 159, $4,000. C. J. Macfarline, Yorkton.

Rural Telephone Companies.—Tullymet, $6,000. Adam Alexander, Tullymet. Tessier, $9,200. E. J. Young, Tessier. Kansas, $3,500. J. J. Gerbrandt, Drake. St. Elmo, $1,000. R. Drayson, Griffin. Young, $8,000. L. J. Preston, Young. Govan, $15,000. J. Orville Clark, Govan.

Edmonton, Alta.—A new by-law was passed by Edmonton council making the interest rate 4¼ net to the city on its issue of treasury notes. A letter from Mr. G. R. F. Kirkpatrick, manager of the Imperial Bank, which was read at the meeting, was as follows: "I received late yesterday afternoon your letter of the 17th inst., and I was surprised on reading over the by-law to find that same provided for the sale of the bills at a rate of discount not exceeding 4½ per cent. Both yourself and the mayor telephoned me on the 11th inst., when the by-law had passed the council, and no mention was made of the rate of interest. I advised my head office immediately by wire that Lloyds' Bank were authorized to go ahead with the sale of the treasury bills. On receipt of your letter last night, however, I telegraphed head office to advise Lloyds' Bank that the rate of discount must not exceed 4½ per cent. My advices from our head office on the 27th of June, copy of the letter being furnished the mayor for his confidential use, stated that Lloyds' Bank believed they could place the treasury bills at about a 4¼ per cent. rate if the transaction was closed expeditiously. Three weeks have expired since I received this advice. I hope, however, none of the bills have been sold at a higher rate in the meantime. One thing I am sure of, of course, is that Lloyds' Bank would sell the bills only at the market price." The mayor was instructed to cable Canadian commissioner Roy at Paris, asking him whether the city could get a good price in that city for the treasury notes. Both he and Alderman Sheppard thought that this should be done in view of the fact that the French loan was over-subscribed forty-seven times recently.

Dunnville, Ont.—Tenders will be received up to August 12th for $25,000 5 per cent. 10-instalment debentures. J. W. Holmes, town clerk. (Official advertisement appears on another page.)

Point Grey.—The municipality issued $569,000 one-year notes last year. Provision has been made for retiring them to-morrow, probably out of the proceeds of the issue made in London in February last of £381,500 5 per cent. debentures at 90. Messrs. Macneill and Young, bond brokers, Toronto, in April bought about $100,000 of the short terms, but they constituted part of an old issue, and the purchase was made from the contractors, who had taken the notes or certificates in payment for work done. The notes have interest coupons attached at the rate of 6 per cent.

◆

DOMINION BANK.

The statement of the result of the business of the Dominion Bank for the six months ended June 30th, 1914, shows a substantial balance of profit and loss account on December 31st, 191[illegible], of $[illegible]47,688. The premium received on new capital stock was $18[illegible],812. The profit for the six months ended June [illegible]th, 1914, after deducting charges of management, etc., and making provision for bad and doubtful debts was $4[illegible],060, an excellent showing. This makes a total of $1,304,4[illegible], which has been disposed of as follows:—Dividend, [illegible] per cent., paid April 1st, 1914, $176,[illegible]; dividend, 3 per cent., payable July [illegible], 1914, $1[illegible]; transferred to reserve fund, $18[illegible]; [illegible]; balance of profit and loss carried forward, $[illegible].

The bank's [illegible] reserve fund is made up as follows:—Balance at credit of account December 31st, 1913, $6,811,344; transferred from profit and loss account, $182,812; total, $[illegible]04,157.

This is a good statement and should do much to make a very gratifying [illegible] for the 12 months of 1914.

BANK MERGERS

Whenever one chartered bank absorbs another, there arises in Canada criticism as to the centralization of banking, the elimination of competition, and the creation of monopoly. As a result of the amalgamation of the Bank of Nova Scotia and the Metropolitan Bank, such suggestions have been made again. The critics have not been as strong in their denunciation as on some previous occasions. This may be because so much else there is to examine just now regarding Canada's economic position generally. After all, the banks have not caused Canada a tenth of the worry that has been caused by those who are worrying unnecessarily about the banks. They have acted as a brake upon the would-be [illegible].

If a man has been doing business at a certain point in Ontario with the Metropolitan Bank his position will not be different necessarily because he is now the customer of the Bank of Nova Scotia. He will probably deal with the same manager. He will not get more accommodation than that to which his basis of credit and general commercial conditions entitle him. He will not get less. He has a credit basis, and he must always have one if he desires accommodation from the bank. [illegible] little fact arises much of the [illegible]. When banker and prospective customer disagree as to what is a proper basis of credit, [illegible] comes.

From the shareholders' [illegible] mation is good. The terms under which the Metropolitan becomes a part of the Nova Scotia [illegible] one share of the Bank of Nova Scotia [illegible] two shares of the Metropolitan Bank [illegible] the shareholders of the Metropolitan Bank [illegible] to agree early in September.

From the viewpoint [illegible] erally, there is little room [illegible] number of chartered banks in Canada [illegible] latest merger to 23. Twenty-[illegible] 41 chartered banks. The [illegible]

[illegible] people. [illegible] Sir Edmund Walker [illegible] large banks. [illegible] with the Dominion have been [illegible] time to time. Strong banks not only perform their duties properly, but they have great ability to maintain and protect the credit of the Dominion at home and abroad. That is a service for which they receive no direct remuneration and which benefits every citizen of the country.

The question of competition and centralization of banking power came up before the Banking and Commerce committee at Ottawa last year when the bank act was being revised. Sir Edmund Walker, in answer to questions by various members, stated his belief that a certain amount of banking combination was good. "I do not know how," he added, "under the conditions of extreme competition that exists between Canadian banks it could be brought about unless we do the very thing that the public has such a bitter feeling against, that is by combination."

◆

In these days, the London underwriters have to [illegible] under. Only about [illegible] per cent. of the last Canadian loan [illegible] slipped off their shoulders on to the public.

A man once dreamed of an eight-course banquet, awaking to find only eggs and bacon for breakfast. The moral is, especially in times of trade depression, [illegible] is better than the [illegible] of more.

NONE FOR THE TROUBLED WATERS

An effort to amalgamate six Calgary oil companies into one consolidated, with capital of $12,000,000, necessitated the ratification by the shareholders of the action of the directors, who had previously arranged the merger. Although the majority of the stock is in favor of the consolidation, the minority holders have been decidedly troublesome. Police assistance was required to help keep the peace, for the meetings were at times operated on the "free-for-all" plan. Apparently those who have created the greatest opposition believe that the big fish are swallowing the little ones, consequently their objection is strenuous.

Opinions differ on the policy of amalgamating, yet the larger holders of stock in the interested companies claim to see in such a course their only hope of being able to weather financial obliteration. Some of these have funds enough to drill one hole. If this turns out to be a "duster," then the loss is absolute. By amalgamating, their interest is spread over a number of holes, any one of which may be a producer. Litigation without end is promised unless an amicable settlement can be reached. What might be termed old line companies, are drilling away, regardless of the troubles of others. Nothing is to be added to the record of development, and it may be some time before there is anything. The indications in the wells now drilling may be good. Geologists and oilmen feel that the prospects are satisfactory, and that there is not any reason to change their favorable opinion as to the outcome.

◆

Even had the Nova Scotia and Metropolitan bank directors been ladies, they could not have kept their merger secret more successfully.

Alderman Clarke, of Edmonton, suggests the reduction in the cost of issuing the city's municipal gazette. It needs abolition, not cost reduction.

OF THE WESTERN CROPS

A spell of extremely hot weather destroyed early prospects of a large crop in Western Canada this year, and at present it is unwise to look for more than seventy-five per cent. of last year's yield.

The district most injuriously affected lies between Herbert, on the main line of the Canadian Pacific Railway, about half-way between Moose Jaw and Swift Current), and Lethbridge. The late rains, which have revived the grain elsewhere, have come too late for that particular district. However, a seventy-five per cent. crop is that much anyway.

◆

Perhaps H. Pollman Evans and J. W. Moyes have been "left" with the underwriters.

RECENT FIRES

Monetary Times' Weekly Register of Fire Losses and Insurance

Enderby, B.C.—July 12—Roman Catholic church. Loss, $2,000. Cause, lightning.

Cobourg, Ont.—July 2—Mr. T. Haig's hay crop, Seymour. Loss and cause unknown.

Halifax, N.S.—July 26—Richmond Sugar Refinery's wharf. Loss, $500. Cause unknown.

North Bay, Ont.—July 22—J. Proctor's garage and auto livery. Loss, $10,000. Cause unknown.

Aylmer, Ont.—July 27—Mr. T. Firby's barns, near Glencolin. Loss unknown. Cause, lightning.

Barrington, N.S.—July 19—Mr. J. A. Kenney's store. Loss, $1,000. Insurance, $400. Cause, lightning.

Napanee, Ont.—July 2—Mr. W. F. Gerow's cheese factory, Switzerville Road. Loss and cause unknown.

Petrolea, Ont.—July 23—Barns on Mr. J. Sheppard's Bralhurst farm. Loss, $4,000. Cause, lightning.

Apohaqui, N.B.—July 19—Messrs. A. E. Colpitts and J. O'Neill's barns. Loss unknown. Cause, lightning.

Brandon, Man.—July 22—Seven barns belonging to Hospital for the Insane. Loss, $50,000. Cause, incendiary.

Quebec, Que.—July 22—Mr. Y. Markolex's boarding house, St. Nicholas Street. Loss, $4,000. Cause unknown.

Chegoggin, N.S.—July 19—Mr. J. Goudey's residence and barns. Loss, $1,800. Insurance, $1,000. Cause, lightning.

Tilbury, Ont.—July 19—Mr. A. Jubienville's barns, Middle Road, Tilbury East. Loss, $1,000. Cause, supposed dropped cigarette.

Montreal, Que.—July 2[illegible]—[illegible] Dolet Street. Loss, $400. Cause, [illegible] smokers.

July [illegible]—[illegible] Park grand stand. Loss, $22,000. Cause, supposed incendiary.

Hull, Ont.—[illegible] Canada Cement Company [illegible] explosion and fire to the extent of $25,000.

July 28—Gilmour and Hughson's lumber yards, Brewery Creek. Loss, estimated, $500,000. Cause unknown.

Ridgetown, Ont.—July 27—Mr. A. Bryden's barns, 10th Concession, Oxford Township. Loss, $2,500. Insurance, $900. Cause, supposed incendiary; Mr. J. Mackenzie's barns, in same district. Loss, $3,000. No insurance. Cause, child playing with matches.

Bancroft, Ont.—July 26—Business section, involving Bancroft Hotel, Benjamine's dry goods store, Reid and Thompson's general store, Willing's bakery, Walter Van-dervort, barber; Sair and Mullett, hardware store; Thomas French, grocery store, and the post office. Loss, $70,000. Cause unknown.

Ottawa, Ont.—July 21—Watson's carriage factory, Friel and Murray Streets. Loss on factory, $35,000; insurance, $20,000; loss on stored vehicles, $10,000; loss to Mr. E. P. Gleeson's residence, $2,000; insurance, $2,000; loss to row of sheds owned by Mr. Gleeson, $500; no insurance.

Saskatoon, Sask.—Fire Chief Heath's report for the week ended July 15, shows the following losses:

July 1—Automobile, owned by Mr. Gordon Mar. Cause unknown. Loss, $500 on car. Insurance, Insurance Company of North America, $1,200.

July 3—Transformers of city of Saskatoon. Cause, lightning. Loss, $30 on transformers.

July 10—Office of Elford and Smith, 126 1st Avenue North. Cause unknown. No damage.

July 14—Motor ambulance of W. A. Edwards and Company. Cause unknown. Loss, $446.20 on car. Insurance carried, $3,000; wire fence works of W. Standall and Sons, 238 Avenue M North. Cause unknown. Loss, stock, $1,200; buildings, $1,800. Insurance, Fidelity Phœnix Fire Company, stock, $1,200; buildings, $1,800.

July 15—Pool room and barber's shop of James Fritzley, 250 1st Avenue South, owned by R. S. Shore. Cause, overheated stove. Loss, stock, $[illegible]; buildings, $132. Insurance, National Fire Insurance of Paris, France, on contents, $1,000; Beaver Fire Insurance, on building, $4,000.

BANK OF ENGLAND RATE UP

The Bank of England rate was raised on Thursday to 4 from 3 per cent., at which it has stood since January 29th.

PERSONAL NOTES

Mr. H. Frost, superintendent of the Guarantee Company of North America, has been visiting Vancouver and the Pacific Coast.

Mr. A. E. Corrigan, of the Capital Life and the Capital Trust companies, Ottawa, has returned from a successful business trip to Europe.

Mr. C. V. Hastings, formerly manager of the Lake of the Woods Milling Company, has been elected a director of the Winnipeg Electric Railway.

Senator T. O. Davis, of Prince Albert, Sask., says that the gloomy reports of the crop situation in the west are not justified by actual conditions.

Mr. J. C. Christiansen has been appointed United States consul at Prince Rupert. This is a compliment to the Grand Trunk Pacific Railway's young city.

Mr. C. J. Pim, city clerk at Sault Ste. Marie, [illegible], is dead. In early days he was storekeeper for the Hudson's Bay Company, and later lighthouse keeper at [illegible] lighthouse for many years.

Mr. E. R. Wood has retired from the board of the Grand Trunk Pacific Railway. [illegible] by the election of Messrs. H. T. Dalrymple, [illegible] and H. E. [illegible].

Mr. [illegible] London last [illegible].

Mr. C. B. Gordon, president of the [illegible] Company, [illegible] company's business and [illegible] in all industrial [illegible].

Mr. D. S. [illegible] has been elected president of the Vancouver stock exchange. The other officers are: Vice-president, Messrs. A. N. [illegible]; secretary, W. K. [illegible].

Mr. J. E. Dalrymple, [illegible] of the Grand Trunk Railway and head of the traffic department, [illegible] of business has already [illegible] ately it will become more marked."

Mr. W. D. Ross, general manager of the [illegible] Bank, will become a director of the Bank of Nova Scotia. He is one of the bankers who unc[illegible] and a genial disposition can be good for [illegible].

Mr. E. W. Cox, recently [illegible] life insurance, which is explained by the fact that Mr. Cox had considerable insurance in the [illegible] which matured some years ago and were paid.

Mr. J. Malcolm McIntyre, of the firm of McIntyre, Son and Company, Limited, wholesale dry goods, Montreal, has been appointed a director on the Canadian Board of the Phœnix of England, to replace the late Mr. J. R. [illegible].

Mr. H. M. Murch, the industrial commissioner of [illegible]ton, continues his noteworthy work in bringing [illegible] to that big centre. It requires personal [illegible] ability, and a good city as a magnet [illegible] in dull times.

Mr. W. E. Brough, a Canadian representative of the New York Life, has had a bad time in the hospital, [illegible] not prevent him from doing business [illegible] in the hospital, $5,000 of which [illegible] the wealthiest women of his town.

Mr. A. M. Nanton, who has [illegible] of the outstanding financiers of Western Canada, has been elected vice-president of the Winnipeg [illegible]. Mr. Nanton recently succeeded the late Sir [illegible] directorate of the Canadian Pacific [illegible].

Hon. Donald McMillan, Senator of the Dominion of Canada, is dead. He was Scottish [illegible] ancestry, having been born in [illegible] Glengarry county. He graduated at McGill [illegible] in 1865, and was called to the Senate [illegible].

of London and Smith's Bank. He is a director of the Grand Trunk Pacific Railway. So much weight is attached to his utterances, that he is exceedingly cautious in giving interviews. When in Canada a few years ago, he granted a special interview to *The Monetary Times*, but insisted on seeing a proof before it was printed.

Mr. R. Grigg, chief of Canada's trade commissioners, whose special report on trade between Canada, Japan and China, will be issued shortly by the department of trade, Ottawa, was formerly the British government trade commissioner in Canada. He has a knack of making official documents interesting and his latest work is not an exception. He is diplomatic and tactful, and one of the powers at Ottawa about whom we hear little, but who does much.

Mr. Hume Cronyn's valuable contribution to the Scottish Bankers' Magazine, and reprinted in *The Monetary Times* last week, regarding the methods of some of the best Canadian loan companies, has attracted considerable attention. Mr. Cronyn seldom appears in print, *The Monetary Times* being one of the few journals which has published his remarks from time to time. What he says is always to the point, and invariably helps Canadian credit.

Mr. E. T. Malone, K.C., who became vice-president of the Imperial Life last week, is a prominent figure in many walks of life. As a lawyer, his mark was made many years ago. As a corporation executive, his experience has been fairly wide and successful. He has helped to direct for several years the destinies of one of Toronto's best dailies, The Star. Speaking to *The Monetary Times* of his new appointment, a man who knows him well, said: "It is a good appointment. Mr. Malone is a man who can always be trusted."

Mr. J. F. Weston, who was made managing director of the Imperial Life Assurance Company, and at the same time became one of the board, is a practical life insurance man of long standing. He is well liked not only by his own staff, but by the life insurance men generally, and by those others with whom he comes into contact. Mr. Weston was superintendent of Ontario agencies for the Manufacturers' Life Insurance Company before he took over the management of the Imperial Life a few years ago. He has been closely identified with the Life Underwriters' Association of Canada, and addressed its convention at Halifax on Tuesday. He made a notable speech at the association's gathering at Ottawa last year.

Mr. G. A. Morrow, who was elected president of the Imperial Life Insurance Company last week, is still a young man, having been born at Millbrook, Ont., in October, 1877. More recently much of his time has been spent in connection with the work of the Dominion Securities Corporation, of which he has been vice-president for several years. At the same time, as vice-president of the Imperial Life, he has been intimate with all phases of life insurance. After leaving school, Mr. Morrow spent three years in the wholesale manufacturing business, but since then has devoted his time to insurance and financial companies. He is a quiet, modest man, of good ability and experience, and there is no question that he will fulfil the duties of his position in the same capable way that has characterized all his work.

Mr. J. C. Biggs, of Edmonton, was a visitor to the head office of *The Monetary Times* this week. He thinks that Edmonton will be one of the first cities in the West to emerge in good shape from the present depression. This will be due largely to the fact that it is rapidly paying its debts. "Canada must amend its speculative ways and get down to more production," said Mr. Biggs. "The farm on which I was born in Ontario was practically self-sustaining. Meat and butter and eggs and flour were produced there. Sugar and tea we got in exchange for farm products. There was very little money in circulation on that farm. It was old-fashioned farming, but it is better than some of the modern farming which keeps a man in debt all the time. A farmer is not a financier. If he were, he would not be a farmer. It is easy enough to borrow money but it is more difficult to repay." Mr. Biggs is an old Ontario boy, his home town being [illegible]. Since he left there, he has seen active service in [illegible] recently, has been engaged in the [illegible] in Chicago and Detroit. For the past [illegible] Edmonton. Mr. Biggs is on his [illegible]

LOAN AND TRUST COMPANIES IN ONTARIO

Their Assets in the Shape of Debts Secured by Mortgages of Land, Total $167,000,000

The debentures payable in Canada of loan and loaning land, doing business in Ontario, in 1913 increased from $22,-530,023 to $23,804,129. Comparatively few of these debentures are held in the Dominion. This is elicited from the annual report for 1913 of the Ontario registrar of loan corporations. Debentures payable outside of Canada, largely in Scotland, increased from $67,708,259 in 1912 to $77,066,347 in 1913. There was also in existence at the end of last year $1,232,405 debenture stock. The interest on all these securities for the one year amounted to $988,043. Among other liabilities to the public are due on loans in process of completion, $1,060,327; borrowed on mortgages and on other securities, $2,030,498; owing to banks, $3,006,091; and miscellaneous liabilities, $3,361,515. These four accounts include the figures of the trust companies also.

Trust Companies' Liabilities.

The trust companies alone have in addition contingent liabilities of $271,293,762. The total liabilities of the various classes of companies are as follows:—

Class.	Total liabilities—1913.
Loan companies (permanent stock)	$187,336,326
Loan companies (having terminating stock)	5,967,107
Loaning land companies	12,311,819
Trust companies	302,647,245

The grand total of liabilities to the shareholders and the public of all these companies doing business in Ontario is $508,262,498. These corporations carry a large amount on deposit, a total of $23,501,053 in 1913, compared with $21,-630,695 in 1912. The loan companies having only permanent stock account for the bulk of the deposits, the figures being $20,361,768 in 1912 and $21,982,964 in 1913.

Capital Stock Figures.

The liabilities to shareholders alone in the case of permanent stock loan corporations is $65,322,159 and of terminating stock concerns, $3,235,044, while for loaning land companies, the amount is $7,030,667 and for trust companies, $23,176,399. The reserve fund of loan and trust companies aggregates $31,508,324. This compares with capital stock fully paid of (permanent) $50,219,074 and (terminating) only $550. The prepaid terminating stock totals $214,132 and the instalment stock, $[illegible]. The loan, loaning land and trust companies authorized capital permanent stock totals $160,-459,102 of which $77,142,097 is subscribed. The terminating capital stock subscribed is $88[illegible],118.

Details of Assets.

Turning to the companies' assets, it is found that the total debts of all these companies, secured by mortgages of land, amount to over $167,000,000, divided as follows:—

	Mortgages of realty.	Mortgaged land held for sale.
Loan companies (permanent stock)	$151,4[illegible]8,264	$471,725
Loan companies (having terminating stock)	5,582,365	33,391
Loaning land companies	1,75[illegible],150	......
Trust companies	[illegible]45,732	317,500

The interest on these sums approximates $2,061,211. The companies of the various classes noted have also as assets debentures [illegible] amounting to $46,-51[illegible],367. They [illegible]. Secured by municipal debentures and debenture [illegible] $2,[illegible]5,015; government securities, $[illegible]; [illegible] stock, $816,568; other stocks, bonds and securities, $[illegible]. Office premises are valued at $5,54[illegible]. The assets owned beneficially, of the loan, loaning land and trust companies transacting business in Ontario, amount to $[illegible] and those not so owned, to $[illegible] of $508,262. The [illegible] of the returns of the [illegible]

WESTERN FREIGHT RATES

(Concluded.)

VIII.

Basis of Three New Tariffs.

Perhaps the main reason why the returns of the Canadian Pacific are so much more favorable than the returns of the Canadian Northern and of the Grand Trunk Pacific is that the Canadian Pacific gets the benefit of through freight both east and west of the prairie provinces. That company carries the through haul not only on its own business, but also on the business of the other systems in so far as their through business is carried in Canada. The Grand Trunk Pacific hopes to have its through connections some time during the present year; the Canadian Northern should finish the construction of its main line certainly some time the year after. The railway situation would then be entirely changed. The monopolistic advantages of the Canadian Pacific that have been referred to will disappear. The through business, to a greater or less extent, will be divided between the three lines. Doubtless the business of the country will increase, suggests Mr. H. L. Drayton, in his judgment on the freight rates, in my view it is bound to increase, and that the check in railway earnings which the results of the last few months shows does not indicate a changed condition of a permanent character, but only evidences a check in an upward movement which is nevertheless [illegible]. There will, however, be three sets of overhead expenses as opposed to one to which the through traffic will be subject, and it is very doubtful that the natural increase of the country's business will make up the Canadian Pacific, at least for some time, with the losses of business that line will experience not only by the completion of the two other systems. But it [illegible] the Canadian Pacific has, during the period under observation, earned large sums of money in respect of traffic which must cease entirely, that is the revenue that it has obtained in hauling the materials, supplies, and men that the building of the other two lines has required.

Divided Among Three Companies.

The Board of Railway Commissioners must take into account the fact that the western business will be divided in the future among three railway companies, and that the present returns of the Canadian Pacific cannot be taken as of necessity showing the continuing earnings of that company, intimates Mr. Drayton. Reference may be had to the government statistics for the year ending June, 1913, from which some indication may be obtained as to what the result of operation of the competing lines as through lines on the revenues of the Canadian Pacific may be.

The recapitulation of the freight traffic statement of the Canadian Pacific for the year ending June 30th, 1913, showed that its total tonnage amounted to 29,471,814 tons, out of which total 21,044,667 tons originated on the company's lines and 1,968,429 tons were received from connections in the United States, while 6,458,718 tons were received from other lines operating in Canada. It is impossible to ascertain whether the completion of the Grand Trunk Pacific and Canadian Northern Systems will result in taking away from the Canadian Pacific of the traffic it now receives from United States carriers, amounting to 6.7 per cent. of its total tonnage. It is quite clear, however, that a great deal of traffic now received from other Canadian lines will cease. This traffic amounted to no less than 20.5 per cent. [illegible] question Grand Trunk and Canadian Northern traffic will no longer be routed via the Canadian Pacific [illegible] to exclusive Canadian Pacific points.

Changes in Rates.

While it was stated by the railway [illegible] policy on which rates had [illegible] sities of an agricultural [illegible] to me to be a sound policy [illegible] west, that policy has not been consistently [illegible].

The rates which, in the first instance, [illegible] Canadian Pacific in Western Canada, have been [illegible]

DIVIDEND No 132

Notice in hereby given that a Dividend of Two and three-quarters Per Cent. for the current quarter, being at the rate of Eleven Per Cent. per annum, upon the paid-up capital stock of the Bank, has this day been declared, and that the same will be payable at the Bank and its Branches on and after the 1st day of September next, to Shareholders of record at the close of business on the 15th day of August next.

By order of the Board
THOS. F. HOW,
General Manager.

The Bank of Toronto, Toronto,
July 22nd, 1914.

only three important [illegible] the company commenced its operations.

The first variation was brought about by the act providing for the construction of the Crow's Nest Branch of the railway company.

The next reduction was forced upon the Canadian Pacific as a result of an agreement entered into by the Canadian Northern with the government of Manitoba. As a result of that agreement, the 14 cent grain rate from Winnipeg to Port Arthur and Fort William became 10 cents, and reductions approximating 15 per cent. of the tariff rates on all other freight were made.

The third reduction of moment in western rates is that which went into effect on the first of April, 1912, as the result of the Board's order made on the complaint of the Regina board of trade.

In addition to the reductions already noted, a reduction of rates in British Columbia resulted from the judgment of the Board in the coast cities case.

Were Five Tariffs.

As required, standard freight tariffs of the Canadian Pacific were filed. There are no less than five mainland scales west of Lake Superior, which constitute the standard tariffs of maximum mileage freight tolls under the Railway Act. They are:—

(1) The Manitoba scale, which is in effect throughout Manitoba, excepting the Canadian Northern's Le Pas line, and in Ontario west of and including Port Arthur (this portion of Ontario will hereafter in the judgment be called New Ontario). Its general basis is 15 per cent. lower than the Canadian Pacific's maximum mileage tariff of 1894, which covered the entire territory between Lake Superior and the Rockies. This is the reduction which has been already pointed out as required to be made by the Canadian Northern as a result of the Bond Guarantee Act of Manitoba.

(2) The Saskatchewan scale, in effect throughout Saskatchewan, also in Alberta, excepting the short Canadian Pacific Mountain section of 50 miles between Canmore and Laggan, and the Grand Trunk Pacific west of Thornton. It applies also on that portion of the Canadian Northern's Le Pas line within Manitoba. This scale is generally 7½ per cent. lower than the uniform "Prairie" tariff, the reduction being complementary to that made in Manitoba by the Canadian Pacific. It was voluntary on the part of the company which was at that time the only company operating in Saskatchewan and Alberta. This rate basis was adopted by the Canadian Northern in those sections of the two provinces opened up later on by that company.

Built Up on '94 Mileage.

(3) The "Mountain" scale, in effect on the Canadian Pacific's rail lines west of Crow's Nest and Canmore; also on the following railways under Great Northern control, namely, the Crow's Nest Southern, the Bedlington and Nelson, the Red Mountain, the Nelson and Fort Sheppard, and the Vancouver, Victoria and Eastern end of Kilgard, B.C.

This latter scale is built up on the same prairie mileage tariff of 1894; but, owing to the greater cost of construction and operation in British Columbia, one mile is counted as two prairie tariff miles for distances up to 220 miles; those over 220 miles, and up to the schedule's limit of 750 miles, being graduated on a somewhat lower though indefinite basis, so that for 750 miles the first-class rate is $2.42 instead of $2.95 as it would be on the two for one basis, being a mileage increase of 46 per cent. No abatement in British Columbia followed the prairie reductions of 1902.

(4) The "Lake" scale between ports of call and landings of the Canadian Pacific Railway steamers and barges on Arrow, Kootenay, Slocan, Trout, and Okanagan Lakes and the Columbia River; also on the two remaining Great Northern controlled properties; namely, the New Westminster Southern, and the Vancouver, Victoria and Eastern Railway west of Kilgard, B.C.; and on the lines of the British Columbia Electric Railway Company.

This scale is virtually the flat prairie tariff of 1894. The Great Northern's maximum rates on the two rail sections named are the same as those of the Canadian Pacific on the inland water [illegible] and required them to be [illegible] Vancouver-Yale district: and the

G. H. BALFOUR, General Manager
H. B. SHAW, Assistant General Manager
F. W. S. CRISPO, Superintendent of Branches and Chief Inspector

London, Eng., Branches, 6 Princes Street, E.C., and West End Branch, Haymarket, S.W.

THE Bank, having over 310 Branches in Canada extending from Halifax to Prince Rupert, offers excellent facilities for the transaction of every description of Banking business. It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

same is true of those rates of the B[illegible] [illegible] Company which are subject to the jurisdiction of the Board.

(5) The "[illegible]" [illegible] [illegible] to traffic [illegible] between the [illegible] Pacific in West Kootenay and the Boundary district. This scale is considerably higher than the "[illegible] Lake" scale, but lower than the "Mountain" scale.

These five scales should be reduced to three, suggests Mr. Drayton, which might be termed "The Prairie," "The Pacific," and "The British Columbia Lakes" standard tariffs.

Board Recommends Three Divisions.

The "Prairie" standard tariff should apply between all points in New Ontario, Manitoba, and Saskatchewan, and in Alberta north to Athabaska Landing and west to the present limits of operation of the Canadian Pacific and Canadian Northern (excluding the Canadian Pacific west of Canmore), the ultimate limits north of Canmore to be fixed when the operation of these railways has been extended westerly.

The maximum basis to be that of the standard tariff of maximum mileage rates now in force in Manitoba and New Ontario; but the initial mileage group of ten miles is to be split by the addition of a 5-mile group, the maximum rates for this new group to be as follows:

	1	2	3	4	5	6	7	8	9	10 Classes
Not over 5 miles ..	10	8	7	[illegible]	5	5	4	4	4	[illegible]

As the present Manitoba standard tariff is [illegible] to 1,500 miles, it must be extended so as to cover the increased area. 2,100 miles will provide a sufficient mileage with rates for all possible movements on the prairies.

In the Pacific tariff the maximum rates are to be charged (a) between any two rail stations both of which are west of the western termini (inclusive) of the "Prairie" standard tariff; (b), between any station so situated and any advertised port of call on the Arrow, Slocan, Kootenay, Trout, and Okanagan Lakes, and the Columbia River; (c) between any station or port of call so situated and any point east of the western termini of the "Prairie" standard tariff to and including Port Arthur.

The new standard tariff while giving effect to increased cost of operation [illegible] tariff basis as existing [illegible] and [illegible] giving [illegible] to the business of the province, [illegible] justify.

The original basis of the "British Columbia Lakes" standard tariff was that equal rates [illegible] lake, and river sections. This [illegible] by the company and before the [illegible] regulation. The principle seems [illegible] reason apparently [illegible]. Mr. Drayton was of the opinion that [illegible] on vessels whose tolls are subject to [illegible] 7 of the Railway Act [illegible] Arrow, Slocan, Kootenay, Trout, and Okanagan Lakes, and the Columbia River, be provided for [illegible] the "Prairie" standard basis, [illegible] practicable water mileage between ports.

In Force September 1st.

The territories [illegible] tariffs will now be referred to as "Prairie," [illegible] and "British Columbia Lakes" territory [illegible].

The tariff changes are to be effective [illegible] September 1st. A careful consideration [illegible] be done shows that [illegible] situation west of Fort William and Port Arthur [illegible] situation east thereof. [illegible] William and Port Arthur [illegible] eastern and western Canada [illegible] are used.

The conclusions [illegible] the Board of Railway Commissioners [illegible] reasonable mean between the extremes [illegible] opinion that the results, [illegible] tion in the west, are fair [illegible] way companies.

◆

During August it is expected that [illegible] will be visited by [illegible] come to this port for the [illegible]

CANADA'S GRAIN-SELLING METHODS WRONG

Commissioners Suggest So and Point to Mistakes Made With Last Year's Crop

Some interesting comments regarding Canadian wheat appear in the recent report of the grain commissioners. The price offered for Canadian wheat of the crop of 1913 was very adversely affected, the commissioners say, by the enormous quantity pressed upon the market during the months immediately following the harvest. An inquirer cannot help raising the question whether Canada has not lost heavily by her method of selling grain. Crop estimates of an optimistic character, the publication of the large amounts daily inspected, the advertising of the financial difficulties of the moment, the method of trading which is almost that of public auctioning, and the concentration of all the energies of the country upon the rapid marketing of the crop, are conditions that must tend to "bear" the market. What prices would a merchant obtain for his stock, they ask, if he (1) proclaimed that his financial position compelled him to sell immediately; (2) advertised that he had an enormous amount of it on hand; (3) and put his stock up to public auction? Yet Canada acted almost that way in regard to the crop of 1913.

The Russian government made provision for enabling the Russian grain to be held back while the torrent from Canada poured into the market. It is probable that this action tended towards preventing a still lower price being offered for Canadian grain. Whether this was so or not, it would be instructive to ascertain how the experiment will work out in regard to the price of Russian wheat.

Australian and Canadian Wheat.

Australian wheat sells at a higher price than the Canadian wheat in the British market. If an explanation of this fact is sought it can hardly be found in the method of trading. Australian wheat is sold upon sample, Canadian wheat upon government certificate of grade. If the method of trading were a main feature in determining the price of wheat, the fact that Australian wheat is sold higher than Canadian wheat might demonstrate the superiority of trading by sample. But the method of trading is not among the important factors determining the price of grain, and the only inference permissible from the higher price of Australian wheat is that trading by sample need present no serious obstacle in the way of obtaining the market value of the product.

Nor does the higher price of Australian wheat demonstrate its superiority to Canadian wheat. As a matter of fact, the prices are determined by, amongst other things, the relative values of the different wheats for the purpose of the British blends, the need of the British and European millers for the different wheats, by the supplies available, and by the available supplies of competing wheats of similar qualities.

Canadian and United States Ports.

In comparing Canadian and United States channels for Canadian grain, whether Canadian elevators and ports, as against United States elevators and ports, from the point of view of the British importer, a distinction must be drawn between Canadian and United States ocean ports in the matter of ocean tonnage. Whether it is due to the different volumes of trade of the two countries, or the different rates of marine insurance, there is no doubt that, in the matter of ocean tonnage, the United States ports have an advantage over those of Canada, and because of this it is difficult for British importers of Canadian grain to give a preference to grain shipped through Canadian ports.

Even under existing transportation conditions there is no doubt, however, that some British importers prefer grain shipped through Canadian channels. On the other hand, there is equally no doubt that some cargoes of grain shipped through Canadian channels have gone out of condition, and that some British buyers have little fault to find with shipments from United States. No British buyer interviewed expressed a preference for cargoes of Canadian grain shipped through United States ports, except in so far as these offered more ocean tonnage and better ocean rates. Were ocean transportation conditions were equal Canadian grain channels would undoubtedly tend to be preferred, say the Canadian grain commissioners.

REPAYMENT OF MUNICIPAL LOANS

II.

Annuity Method Explained It is Frequently Favored by Local Authorities

BY S. P. GROSCH.

The annuity method of repaying municipal loans consists of the repayment of an equal annual instalment of principal and interest combined. The annual amount repaid to the lender consists in the earlier stages of the loan of a comparatively small portion of principal and a comparatively large portion of interest with the portion of principal included in the instalment of repayment gradually increasing and the portion of interest gradually decreasing.

Considering a loan of $10,000 repayable in ten years with interest at 6 per cent., the amounts of repayment for the respective years indicated would be as follows:—

Year	Principal	Interest	Total
1	$ 758.67	$600.00	$1,358.67
5	957.80	[illegible]	1,358.67
10	1,281.77	[illegible]	1,358.67

The lender is repaid a smaller portion of the principal during the earlier stages of the loan and a larger portion during the latter stages of the loan than under the instalment method. Reinvestment of principal in a similar manner as under the instalment method is therefore necessary.

Objections to Method.

The objection [illegible] under the instalment method that the burden falls most heavily during the early stages of the loan is here removed. The amounts required to be raised annually are equal throughout the entire period of the loan.

This method of repayment, [illegible] where the work to be undertaken is one which will involve considerable expense in maintenance during the later period of the loan, shifts the heavier portion of the burden to future ratepayers. Where, however, the loan is applied to the purchase of land or the construction of substantial buildings and the annual charge for maintenance is not likely to increase materially during the period of the loan, the annuity method would appear to be the proper method to adopt, provided the [illegible] are calculated to [illegible] the period prescribed for repayment.

Light Annual Payments.

This method of repayment is frequently favored by local authorities at the time of borrowing owing to the opportunity it affords of making the earlier annual repayments lower than under the instalment method. The fact should, however, not be overlooked that the later payments will be heavier and that the total amount required for repayment of the loan will be considerably greater than under the instalment method, this being on account of the local authority retaining a larger portion of the principal for a longer period and paying interest thereon.

Both the instalment [illegible] effect, contain within themselves a sinking fund which bears the same rate of interest as the loan itself. By repayment of a portion of the principal, interest on such portion immediately ceases, which, in effect, is the same as setting aside a similar amount into a sinking fund [illegible] ed to accumulate with interest at the same rate as the loan [illegible] the loan will extinguish the debt at the expiration of the prescribed period. By making such repayments [illegible] the principal direct, no expense is incurred [illegible] investment, and the trouble [illegible] is obviated.

To Overcome Objection.

In an endeavor to overcome the [illegible] that under the instalment and annuity methods the lender is compelled to accept annually a portion of the principal advanced, the method of issuing serial bonds [illegible] been devised. Instead of issuing debentures [illegible] ner that the number of coupons [illegible] will equal the number of annual [illegible] each coupon will equal the amount of [illegible] interest due in the respective years [illegible] coupons, debentures are now issued [illegible]

Alan J. Adamson, President
Sir R. P. Roblin, Vice-President

Acts as Trustee, Administrator, Executor, Assignee, Guardian, etc.
Receives money for investment in mortgages under guarantee of principal and interest, or otherwise, on such terms as may be arranged.
Undertakes the management and sale of Real Estate.
Correspondence invited.

there is one or more debentures for each year during the period of the loan, the amount of the debentures being for the amount of principal repayable in the particular year of maturity indicated on the debenture. If the amount is large, more than one debenture may be issued for any one year for a portion of the principal and the total amount of such debentures issued for one year being equal to the amount of principal repayable in that particular year.

Coupons for interest only are attached, the number varying with the number of annual payments of interest to be made. Each debenture is complete in itself. Accordingly, on the debenture payable at the end of the first year, one coupon is attached, the second year two coupons, the third year three coupons, and so on from year to year for the number of years over which the loan is spread, the amount of each coupon being the amount of interest due annually on the amount of the particular debenture. Interest is computed at the rate payable on the loan. One of such interest coupons is payable in the year indicated on the face thereof.

Sell to One Client.

According to this method the bond buyer may dispose of one year's debenture or debentures to a single client and if the debentures for each particular year are distributed among as many different clients then the objection that the lender is compelled to accept a portion of the principal annually is overcome, as the client who holds the debenture or debentures payable during, let us say, the seventh year, would obtain interest annually during the seven years and would have the whole amount of the principal repaid at the expiration of the seventh year; similarly each year's debentures would be dealt with during the period of the loan.

The bond buyer has the additional advantage of being able to give his clients a certain number of short or long-term debentures as the individual lenders may desire. According to this method of issue the individual debentures resemble a sinking fund debenture in that no portion of the principal is repaid during the term of the debenture. It must be pointed out, however, that if a single client were to purchase and hold as an investment the entire issue the above advantage would not be derived by such client.

(To be continued.)

◆

TRAVELERS OF HARTFORD FIFTY YEARS OLD.

In 1859, while traveling in England Mr. James G. Batterson had purchased at Leamington an insurance ticket issued by the Railway Passengers Assurance Society of London, which insured the traveler in case of accidental death or injury while traveling from Leamington to Liverpool; this ticket now in the possession of the Travelers Insurance Company of Hartford, is one of its most treasured possessions, for it suggested to him the possibilities of a business providing for insurance against all kinds of accidents. Four years later, in June, 1863, the charter for the Travelers Insurance Company was approved by Governor Buckingham, and on April 1st, 1864, the first written contract was issued.

In 1866, the Travelers began writing life insurance, adopting from the beginning the guaranteed low cost forms and with the exception of a brief period has confined itself to the issuance of such forms of contracts of which it has been the chief exponent in this country. In life insurance as in accident insurance, it has been foremost in introducing and developing many notable features of great value to the insuring public. In 1889 the Travelers further enlarged its sphere of operations by writing liability insurance, and has developed in later years the idea of compensation insurance as well.

In 50 years the business of accident insurance has become one of the three great branches of insurance, and the Travelers, the pioneer company, has become one of the greatest accident and liability insurance companies in the world, and one of the leading life companies in the United States.

The 50th anniversary of the issue of the first policy by the Travelers Insurance Company was observed on the 1st, 2nd and 3rd of April, 1914, with the greatest convention in the history of the company. Four hundred and thirty managers and agents representing [illegible] states in the union and five provinces in Canada gathered in Hartford. The company has issued a [illegible] in connection with that convention

IRON AND STEEL TRADE

Low Prices Are Being Quoted for Car-Building, it is Said—General Situation Quiet

Monetary Times Office,

Montreal, July [illegible]th.

The iron and steel trades show a slight improvement. Mr. Thomas Cantley, general manager of the Nova Scotia Steel and Coal Company, states that an order for [illegible] tons of steel has been awarded the company in connection with the Halifax Terminals and docks. This order, it is understood, is not for immediate delivery, so that the position of the company will not be affected in the immediate future. In addition, the company has received an order from the Canadian Northern for spikes, bolts and angles, being part of the order, no doubt, to which the iron and steel trade has been looking forward.

The Montreal plants of the Steel Company of Canada are working at about 85 per cent. of capacity, while the Hamilton plants are said to be working at a smaller capacity than this, possibly at 50 per cent. of capacity.

Asked as to the situation in the Dominion Steel Corporation, President Plummer makes the statement that the plant at Sydney is operating at about [illegible] per cent. capacity. The rail mill and the [illegible] mill are operating only [illegible], and three blast furnaces are working. Aside from the business placed by the Canadian Northern, there has been a slight improvement.

With respect to the Eastern Car Company, Mr. Thomas Cantley recently stated that the company would [illegible] dependence on the Nova Scotia Steel and Coal Company, [illegible]. It is assumed that he anticipated [illegible] operating at sufficient capacity to carry its own [illegible] obligations. The volume of orders for passenger cars has been fairly satisfactory during recent months. The Canadian Northern [illegible] about $[illegible] this year in passenger cars [illegible] have already been placed. [illegible], however, report business dull in the freight car departments, and [illegible] not look for much improvement [illegible]. [illegible] companies have been buying freight [illegible] past and are now well supplied [illegible] rolling stock to keep up [illegible] traffic.

There has recently been some [illegible] the profit on car building and the prices at which [illegible] have been taken. It was rumored that [illegible] closed at a price of $[illegible]5 per car, [illegible] the price during 1912 was $1,[illegible]50. It is [illegible] profit on cars is considered to be [illegible] depreciation and operating expenses. [illegible] belief that contracts recently closed [illegible] like prices which prevailed heretofore, [illegible] been concessions made. Reports have [illegible] contracts having been closed recently [illegible] time ago, and which did not go through [illegible] quoted was too high. A large [illegible] to be revising figures on a [illegible] a consequence, there may be [illegible].

◆

PREPARING FOR CANAL OPENING.

Opening of the Panama Canal, [illegible] consul-general, will bring Germany [illegible] port, within nine days' distance [illegible] days now and 18 days [illegible] completion of the [illegible] with the canal will orient [illegible] westward instead of [illegible] the port of Para from 15 to 5 [illegible] Liverpool to 2[illegible], against [illegible].

The Chilians and foreigners [illegible] into iron, copper and [illegible] larging market for those [illegible] United States consul at [illegible] capital is taking [illegible] machinery and supplies [illegible].

CANADIAN PACIFIC RAILWAY AND CROP

Question of Stock Issue—Change of Public Mind in Investment Matters

Monetary Times Office,
Montreal, July 29th.

The decline in Canadian Pacific Railway stock occasioned many unfavorable stories. These included one to the effect that the company intended to make a new stock issue and another that the western crops were being damaged by drought and would be below those of last year.

To the report concerning the new stock issue, President Shaughnessy issued a denial, at the same time stating that it was "not unlikely that the directors of the Canadian Pacific Railway will, at their meeting in October, recommend to the shareholders that the authorized ordinary share capital be made to conform to the amount for which the company has legal warrant."

The Canadian Pacific Railway has by its charter from the Dominion Government, warrant to issue up to $300,000,000 of ordinary share capital on an order-in-council, without making application to parliament. The issued amount is now $260,000,000, the last issue of $60,000,000 having been allotted at 175 on January 2nd, 1913.

While the company has the right from government, subject to order-in-council, to issue capital up to $300,000,000, it has not this right from its shareholders, and the full amount authorized by the shareholders has now been issued. Hence, the directors propose to ask the consent of the shareholders at the next annual meeting to issue the remainder of the stock as needed. Having obtained the consent of the shareholders, it will be necessary only to obtain an order-in-council. When the entire $300,000,000 has been issued, the company will have to obtain consent from parliament should it wish to increase its capital further. President Shaughnessy's statement that as the company had no new works of magnitude in contemplation, no necessity exists for a further stock issue, is causing comment. The West feels considerable disappointment at this.

These incidents illustrate the change which has taken place in the public mind concerning investment in general and investment in Canadian Pacific in particular. A year or two ago, an announcement of a new stock issue was regarded by the financial world as a bull card. A new stock issue was a "plum," and rights were eagerly sought. To-day, the announcement that a new stock issue is coming is industriously circulated for the purpose of depressing the price of the stock.

As for the report concerning the damage to the western crop, this is the period of the year when changes are rapid. There is good enough warrant for the statement that the crop is damaged. Nor is this damage, apparently, confined to the sections which are not an important crop factor. Present advices favor the view that the crop is not likely to be more than fair and will not be equal to 1913.

◆

STANDARD OIL COMPANY OF CANADA.

Interests affiliated with the Imperial Oil Company, Limited, the Canadian subsidiary of the Standard Oil Company of New Jersey, explain that the Standard Oil Company of Canada is in no way connected with the New Jersey company. It is an English concern incorporated some years ago in London. The company has recently been making an attempt to rearrange its capital stock, but it is reported that sufficient votes have not yet been received to make its plan effective.

In a recent circular to shareholders the Standard Oil Company of Canada states that the number of those who had expressed their willingness to exchange their holdings for shares in the proposed new company were not sufficient to justify the cost of registration of the new company in accordance with the scheme. The liquidation will not proceed with the [illegible]. Shares of the new company are [illegible]. [illegible] shares have not voted either way.

CANADA IRON REORGANIZATION

New Company Will Purchase Assets of Old Corporation—Details of the Scheme

The reorganization of the Canada Iron [illegible] proceeding. The unsecured creditors [illegible] Montreal last week and approved a [illegible] tors for reconstructing the company. [illegible] per cent. of the creditors represented [illegible] adopting the scheme [illegible] printed in *The Monetary Times*. [illegible] in more detail, is as follows:—

A new company [illegible] assets of the old corporation [illegible] of its business. The new company will [illegible] capital, and for this it will [illegible] A debentures selling these for cash.

For Bondholders and Creditors.

The new company will also have B [illegible] shares and common shares. Except for [illegible] which it may keep in the treasury, it will [illegible] the B debentures, preference shares and common shares to the liquidators and trustees, for division among the bondholders and creditors of the corporation, on the following lines:—

The first bondholders of the old corporation will get B debenture stock in the new company of the same face value as their old holding. In consideration of the loss of interest, and of their waiver of certain other rights, which they hold at present, they will also receive common shares to the extent of 10 per cent. of their holdings. This leaves the preference shares and the balance of the ordinary shares to be divided between the second bondholders and the creditors.

Assets of the Company.

It was not considered necessary to deal specially with the creditors claiming liens as the assets of the corporation will be purchased by the new company subject to such liens, and the new company will deal with them.

Apart from this class, there were creditors to the extent of approximately $500,000 secured by the deposit of gold notes of the corporation, and creditors for approximately $400,000 holding no security at all. As the result of negotiations between the creditors secured by gold notes and the second bondholders, it is hoped to arrange that this class of creditors will waive their claims to special treatment, and will stand in with the unsecured creditors.

For Unsecured Creditors.

On the other hand the second bondholders have [illegible] if this is done, to release sufficient preference [illegible] able the whole body of unsecured creditors [illegible] cent. of the face value of their claims in preference [illegible] ceiving the remaining 50 per cent. in ordinary [illegible] the original scheme, the unsecured creditors would [illegible] received ordinary shares, while the second bondholders [illegible] have received preference shares to the [illegible] bonds. This, through the surrender [illegible] be reduced to 80 per cent., the remaining [illegible] replaced by the same amount of [illegible] bondholders will also receive 20 per cent. [illegible] consideration of their waiving the [illegible] time of liquidation, and other privileges [illegible] entitled. The preference and common [illegible] corporation will receive no consideration [illegible] subscribe for the new A debentures [illegible] shares. The new company will pay all [illegible] liquidation.

◆

With a view to encouraging [illegible] portant industry, the province of Ontario [illegible] Duncan Chisholm, a Toronto [illegible] a pulp and paper mill at Smooth Rock [illegible] River, and to expend $1,75[illegible] of paper will not be less than [illegible] of the concern means employment [illegible] ten months of each year.

CANADA'S EXPORTS GROWING

The revised summary of Canadian trade for the twelve months ended May shows an aggregate of $1,096,883,675 as against $1,097,934, an increase of about $17,000,000. There is a large increase in exports and a decrease in imports.

Imports in the twelve months totalled $621,822,564, a decrease of $57,000,000 compared with the last year. Exports totalled $475,061,111, an increase of nearly $74,000,000. The largest increase was in agricultural produce, totalling $38,000,000, while manufactures exported increased $14,000,000. In imports there was a decrease of $12,000,000 in purchases from the United States and $40,000,000 in purchases from the United Kingdom.

FAMOUS MEN ON LIFE INSURANCE

Life insurance, honestly conducted, is truly a great blessing.—Charles Dickens.

An assurance upon any life is not only a private but a public blessing.—Professor De Morgan.

Men toil, work, slave, nay, almost sin, for their families; they do everything but adequately insure.—John Francis.

All may, by the exertion of a little forethought and a little outlay, protect their families from want.—Bishop Potter.

A policy of life insurance is the cheapest and safest mode of making a certain provision for one's family.—Benjamin Franklin.

I have kept on my life a perpetual assurance and I think my duty to those dependent upon me would be undischarged if it were not so.—Bishop Hawkes.

The hopes of parent and child, husband and wife, mother and sister, old and young, the widowed and orphaned—all are garnered up in their keeping.—N. P. Willis.

If one is to die this year, it's plain enough he has bought this wealth cheap. If he is to live a long life, it is worth all it costs to feel so rich all the while.—Elizur Wright.

A policy of life insurance is always an evidence of prudent forethought, and no man with a dependent family is free from reproach if his life is not insured.—Lord Lyndhurst.

OCCUPATIONS OF THE BRITISH PEOPLE.

A vast amount of information respecting the occupations and industries of the people of England and Wales is given in the census returns for 1911. A summary of the principal industries or services shows that, exclusive of domestic service, agriculture affords employment to more persons than does any other single industry or service. The following are the net totals of the principal industries

	Total.	Males.	Females.
Domestic indoor service	1,302,438	41,765	1,260,673
Agriculture	1,229,555	1,134,714	94,481
Coal mining	971,236	968,051	3,185
Building	817,942	814,989	2,953
Cotton manufacturers	623,825	250,991	372,834
Local Government (including police and poor law)	588,951	412,501	176,450
Railway companies service	542,969	535,799	7,170
Engineering and machine making, iron founding and boiler making	510,226	502,942	7,284
Dressmaking	336,955	3,826	333,129
Teaching	300,831	89,648	211,183
Inn, hotel service	289,056	178,550	110,506
Grocery	269,322	210,387	58,935
Tailoring	254,828	127,301	127,527
Printing, bookbinding and stationery	249,465	161,856	87,609
National Government	249,199	215,110	34,089
Wood working and furniture	233,189	105,552	127,637

THREE BILLIONS OF OUTSIDE CAPITAL

Invested in the Dominion—Britain Has Provided Large Supplies

That British people have provided a larger amount of capital than any other country for developing the resources of natural wealth throughout the world wherever found, is shown again in the exhaustive paper of Sir George Paish to the foreign banking section of the London Statist.—

Sir George states in part:—"The wealth of the United Kingdom in 1814 was computed at about £2,500,000,000, while a conservative estimate would place it now at about £[illegible],000,000, a sixfold increase, while population has grown less than two-and-a-half fold, or 130 per cent. The income of the British people in this period has increased about eightfold, from £300,000,000 to £2,400,000,000. The wealth of France has expanded fivefold, from under £2,000,000,000 to nearly £10,000,000,000, while her income has risen from £[illegible] to about £1,200,000,000, with only a one-third fold ([illegible] per cent.) increase in population. The progress of Germany has been equally remarkable.

A century ago there was no Germany, and the number of German States by no means overburdened with money or with riches. Their aggregate wealth and income were probably less than France's. Now United Germany is estimated to possess an income of nearly £2,000,000,000 and accumulated wealth of about £16,000,000,000. During the century Germany's population has grown from 24 millions to over 67 millions, or 180 per cent.

Canada's Wonderful Advance.

But if the economic welfare of the older countries has improved in this remarkable manner, what of the younger states which have attracted vast numbers of persons from the densely populated districts of Europe? The progress of the new countries is still more noteworthy, and the advance in the well-being of their citizens still more marked. For the most part the persons who migrated to them were inconceivably poor and destitute, and these have attained incomes and wealth much greater, on the average, than persons who elected to remain in the older countries. During the last hundred years the wealth of the United States has increased from about £350,000,000 to something like £30,000,000,000, or nearly ninetyfold; and the income has risen from less than £100,000,000 to about £7,000,000,000 a year, while population has grown from 8 millions to 98 millions, a twelvefold expansion. The progress of the other young countries has been small in comparison with the growth of wealth in the United States; nevertheless, when one remembers the meagreness of the populations of Canada, of Australia, of the Cape, and of South America, and the smallness of their incomes in the early part of last century, the really wonderful advance in their economic well-being becomes apparent.

World's Annual Savings.

From the data available it is evident that the world's annual savings are now nearly as great as the world's total income a century ago was less than £1,100,[illegible] we have referred, the combined annual savings amount in the neighborhood of £2,300,000,000 a year, whereas their total income a century ago was less than £1,100,000,000, and while they saved less than £200,000,000. The combined income of these countries has now risen to about £[illegible] per annum mainly in consequence of the great [illegible] from year to year by means of the credit system [illegible] available for expanding not only their own but the world's productive power. In no other country is the credit system as highly developed as in Great Britain. The country which comes next to Great Britain in its appreciation of the credit system is France. The German people in the last [illegible] years have had a much greater appreciation of the credit system. No group of countries has derived greater advantage from the credit system than the various agricultural countries of the new world, which have obtained vast amounts of capital from Europe. It is evident that the young countries would have developed very slowly if they had been compelled to provide the capital needed by incoming immigrants to settle on the land and in the mines and thus to [illegible]

haustible supplies of natural wealth which these countries contain.

The amount of capital obtained by the United States from abroad is calculated to reach £1,200,000,000, while the amount of foreign capital invested in Canada is about £700,000,000. In Argentina foreign investments of capital now exceed £500,000,000, and in Brazil about £300,000,000. In the whole of North and South America the investments of foreign countries are not far short of £4,000,000,000, including the investments of the United States in Mexico, Canada and other countries. Of this total Great Britain has supplied about £2,300,000,000. Australia and New Zealand have been supplied with nearly £500,000,000 of foreign capital, almost entirely British, and South Africa with about £450,000,000. The capital entrusted to Russia, largely by France, but also by Germany, Holland, Belgium and Great Britain, is about £800,000,000.

From Wilderness to Farms.

The expenditure of these vast sums has transformed the wilderness into cultivated farms, and has opened up for the use of the whole world inexhaustible supplies of vegetable and mineral wealth.

But the advantages of the credit system are infinitely greater than the mere investment of foreign capital in these countries. By means of the foreign capital tens of millions of persons have been transported from the densely populated countries of Europe to lands where there was practically no population and where there was the opportunity of gaining incomes not only large enough to supply the newcomers with food and clothing in abundance, but to enable them to provide themselves with great quantities of additional capital.

Indeed, says Sir George, nowhere is the value of the credit system more highly appreciated than in the young countries.

◆

MONEY FOR ALBERTA FARMERS

More ready money for the farmers of Alberta is the proposal of the provincial government. Hon. Charles R. Mitchell, provincial treasurer, says:—

"We shall use our best endeavors to secure this for the farmers. This does not mean cheap money. Money is not cheap at present in this or any other country, and it is likely to become dearer.

"The government is preparing to take action along the lines recommended by the commission, headed by Dr. Henry Marshall Tory, president of the University of Alberta, which toured Europe last year in the interests of Alberta, studying the question of rural credit.

"This credit will be extended only for constructive and profitable purposes and it may be so nominated in the bond. We believe that, besides improved and additional financial facilities, there will be better and more purposeful plans for farming and all branches of agriculture throughout the province in the future."

◆

BOND OFFERING IN BRITISH COLUMBIA.

A block of $100,000 6 per cent. debentures of the Howe Sound and Northern Development Company is being offered at 95 and accrued interest from June 1st, 1914, by the Yorkshire Guarantee and Securities Corporation, Limited, of Vancouver. The total issue is $300,000. The debentures are dated May 1st, 1914, and mature December 1, 1915, and are redeemable at par with interest. The issue is secured by the assignment to the trustees for the debentureholders of certain moneys to become due under an agreement of sale between the Howe Sound and Northern Railway Company and the Howe Sound and Northern Development Company and the Pacific Great Eastern Railway Company and the Pacific Great Eastern Development Company. This agreement requires the two latter companies to pay to the Howe Sound companies $1,[illegible],000, of which $600,000 and interest have been paid, for which certain securities under the agreement have been delivered. These debentures are a direct obligation upon the purchasing companies. Those interested in this investment may obtain further particulars from the Yorkshire Guarantee and Securities Corporation, of Vancouver. With only the information noted above, before us, the debentures appear to be a good investment.

MUNICIPAL SINKING FUNDS

Should Cities and Towns Invest in Their Own Debentures?—What Authorities Say

A [illegible] asks for opinions as to the practice of many Canadian municipalities investing in their own debentures. In his recent address at Moose Jaw, Mr. S. P. G[illegible], of the Saskatchewan local government board, [illegible] such investment, under certain conditions. He added: "If local authorities desire to invest sinking funds in their own debentures, it would be wise to give a preference to short-term debentures. Care should [illegible] to see that the debentures taken up by the sinking fund will mature before any large amount falls due on maturing bonds, in order that the money and not merely securities is at the disposal of the officials when required; otherwise such authorities may be forced upon the market at inopportune times with securities upon the sale of which loss may be sustained."

Cash Sinking Fund.

In reply to an inquiry of *The Monetary Times* on this subject, Messrs. Br[illegible], [illegible] and Company, Toronto, send the following valuable contribution:—

"It is undoubtedly true that a large sum of money, which must continue to accumulate over a long period of years, is worth more than 3 per cent. in this financial era. Municipal sinking fund computations should not be founded upon a higher compound interest basis than 3 per cent. But if a municipality can reap a higher return for its sinking fund with absolute safety, surely the continuance of the 3 per cent. return is poor financing. And the strength of this argument is multiplied manifold if it can be shown that the sinking fund investment of a higher yield than 3 per cent. conserves the interests of the debenture-holder more scrupulously than does the cash sinking fund.

"This can be shown without difficulty. Experience proves beyond all shadow of doubt that a cash sinking fund is too accessible, too quickly convertible, too readily diverted into other channels, to be safe. One large Canadian city has actually authorized itself to draw against its sinking fund under certain conditions. And some other municipalities prostitute to other uses their sinking funds without going through the form of conferring upon themselves any [illegible] authority to do so.

In Municipal Debentures.

"The natural solution is the investment of the municipal sinking fund in the class of security which the fund itself is to redeem—municipal debentures. This practice is thoroughly sound in principle. It is perhaps not too much to say that the majority of Canadian municipalities which invest their sinking funds in debentures give the preference to their own debentures. The adoption of this practice calls for considerable care on the part of municipal officers and finance committees.

"In not a few cases in Canada, cities invest their sinking funds in their own debentures and [illegible] keep these debentures alive in the sinking funds. Consider what this means. It means that the city is attempting to convert a liability into an asset. The city puts itself in the position of a man who borrows on his note and then reduces his indebtedness by buying back part of his note, [illegible] the sum bought back, and paying himself interest on the sum until the note falls due. Such a [illegible] is nothing short of absurd. The holder of the city's debentures, of course, is afforded no security [illegible]. As Browne puts it in his admirable work on 'The Sinking Fund'—"If the sinking fund is invested in the debtor's own bonds or obligations, its existence is not of the least advantage to the creditor. It gives him no additional security, legal, equitable, or honorary. It is a [illegible] so far as he is concerned."

This Is Dangerous.

"When a municipality sells its new debentures [illegible] its own directly to its own sinking fund, permanently or for re-sale, the situation becomes little short of dangerous. Manifestly this system permits a municipality to sell its own bonds to its sinking fund when the municipality's credit, or general market conditions, might be such that there would be no sale, or at best a sale at a very large discount, in the open market. It is impossible for the city to [illegible]

accurately what price it would rec[illegible] in a competitive market. If the city sells the bonds to the sinking fund at too low a price it is a bad thing for the city, while if the price is too high it is a bad thing for the sinking fund. And the sinking fund is but a trust fund which belongs—not to the city—but to the holders of the city's outstanding debentures. Apart altogether from this point there is the fundamental truth that the municipality which sells its own bonds to its sinking fund is borrowing money directly from its own sinking fund. And this is assuredly bad business.

"Much more business-like than the keeping alive of a municipality's own debentures in that municipality's own sinking fund is the immediate destruction of tbe debentures the moment they are purchased by the sinking fund. This is the nearest possible approach to the serial or instalment system of bond amortization, which system is at once safer and more economical from the debtor's standpoint than is the sinking fund system.

Hard to Dislodge.

"The municipality which purchases its own debentures from time to time with its sinking fund, and at once destroys these debentures, is comparable to the corporation which retires its bonded indebtedness by yearly sinking fund drawings. The analogy falls to the ground, however, when it is remembered that all the corporation's bonds are subject to redemption at a fixed price and at fixed intervals, whereas under present conditions of issue the municipality must enter the open market to purchase its own bonds. Blocks of bonds held by institutions will be found very hard to dislodge unless an unreasonably high premium be offered. Again, the municipality has many outstanding bond issues, and the recurring investment of the sinking fund for each individual issue in parts of that very issue until maturity is of course utterly impossible.

"The conclusion of all leading authorities is that the safety of a sinking fund, from the creditor's standpoint, varies directly with the degree to which that sinking fund is beyond the debtor's control. A point to be remembered is that a sinking fund is a trust fund held for the benefit of creditors. In private corporate finance the debtor would never be given charge of the sinking fund. Rather would this sinking fund be placed in control of a third party whose duty is to safeguard the interests of the creditors. It is safe to assume that this comparatively simple truth will come into a much broader realization in the market for Canadian municipals during the next ten or 15 years. This leads us to conclude that trust companies will come into prominence more and more as custodians of Canadian municipal funds during the next decade or two."

◆

SUDBURY NICKEL AREA

Under direction of the Department of Mines, Mr. W. H. Boyd, chief topographer of the Geological Survey of Canada, and his assistant, Mr. Dickison, have arrived in Sudbury and will undertake a reconnaissance of the entire district known as Sudbury Nickel Area for topographical mappings. This is but the forerunner of two or three years' study which will be devoted to the district by the department.

◆

Plans are being considered by the Montreal Harbor Board for the construction of an addition to their No. 1 elevator, which will give it an additional capacity of 1,500,000 bushels. The elevator already has a capacity of 2,500,000 bushels.

Work on the completion of the National Transcontinental Railway is being rushed forward under Hon. Frank Cochrane as commissioner, says an Ottawa dispatch. Late last fall, the steel on the whole eastern division was linked up, and since then the engineers have been at work getting the roadbed in shape for carrying traffic. Eleven thousand men are now engaged at this work, chiefly in train-filling, etc., and the expectation is that the whole line will be ready for operation by October. The big car ferry Leonard, which has been built in England, will be ready to carry trains between Quebec and Levis, thus providing through communication over the whole line of the Transcontinental.

OTTAWA TO SELL MILLION OF BONDS

City's Finances Are in Satisfactory Condition—Assessment and Net Debt

The city of Ottawa have for sale over $1,[illegible],000 worth of debentures. The civic authorities, including Mayor [illegible] McVeity and city treasurer H. [illegible] Corbett, are [illegible] without any great anxiety regarding the price they will receive for the bonds. Naturally the price will be regulated by market conditions, but the credit of Ottawa [illegible] unusually high and this must have some effect on the price received. The bonds are divided as follows:—

Amount.	[illegible]
$ 570,000	[illegible]
550,571	[illegible]
35,[illegible]	[illegible]
$1,155,950	

Fours and Fives.

They are all a liability of the city at large, $9[illegible] 17 bear interest at 4½ per cent. and $1[illegible] bear interest at 5 per cent. Two separate tenders will be received, one for $190,000 [illegible]-year debentures, and the other for the remainder of the debentures $965,950.17. The tender for the $190,000 debentures must be accompanied with an accepted cheque for $1,000, and the tender for the $965,950 debentures with an accepted cheque for $5,000. The debentures will be made payable in Ottawa, New York or London at the option of the purchaser, and in denominations to suit.

The city's finances are in good condition. The assessment is approximately $1,[illegible] per capita, and net debt per capita is $48.83. Ottawa's sinking funds are in first class shape to meet any possible shrinkage in investment. Being the seat of the Dominion Government is indirectly a guarantee of Ottawa's steady growth and popularity. The government spends annually a large sum towards beautifying the city. Ottawa has an abundant supply of water power and consequently many fine industries.

Assets and Liabilities.

While the city's balance sheet for the year ended December 31, 1913, shows assets $[illegible] less than current liabilities, the greatest deficiency [illegible] $[illegible] in waterworks, which is accounted for by extraordinary expenses [illegible]. When one considers that Ottawa has an excess of $[illegible] in capital assets over capital liabilities, besides an assessed value in ratepayers' properties of $100,000,000 for taxation purposes, it can be seen that any reasonable [illegible] current operation of one year can be taken care of [illegible] in the future.

Ottawa has sold the following debentures during the past three years:—

	1911.	1912	1913.
Schools	$ 73,500.00	$ 40,000.00	$ [illegible]
Waterworks	50,000.00	[illegible]95,5[illegible]	[illegible]
General	465,500.00	410,[illegible]	[illegible]
Local improvements	....	[illegible]	459,[illegible]
Electric	....	..	[illegible]
	$589,000.00	$1,[illegible]	$1,[illegible]

The city's requirements for 1914 will be about as follows:—Public schools, under the public [illegible] $[illegible]; main drain under authority of Ontario Assembly, $[illegible]; Broad Street sewer under authority of Ontario Assembly, $[illegible],000; water mains, etc., under authority of Ontario Assembly, $120,000; waterworks intake pipe under authority of Ontario Assembly $120,000; discount on debentures under authority of Ontario Assembly, $36,000; Pretoria Avenue bridge under authority of Ontario Assembly, $[illegible]; Billings bridge under authority of Ontario Assembly, $50,000; [illegible] under authority of Ontario Assembly, $5[illegible]; [illegible] Howick Hall, under authority of Ontario Assembly, $[illegible]; Rideau Ward sewer under authority of Ontario Assembly, $25,000; total, $810,000. Local improvements [illegible] by the Ontario Assembly, $406,950. Total under [illegible] $1,225,950.

In addition to the above, there is likely to be $[illegible] required for a new water system.

NEW BRUNSWICK IS SATISFIED

Business is Good, Industrial Situation is Better, and Crops Outlook is Gratifying

(Special Correspondence.)

St. John, N.B., July 28th.

New Brunswick has weathered the financial disturbance which has been travelling Canada better, perhaps, than most of the other provinces of the Dominion. This has been largely due to the fact that there has been more conservatism shown by business men there than in the west. The absence of wild speculation has also been in favor of New Brunswick. With a general improvement in business, New Brunswick is showing evidences of rapid recovery. At the city of St. John, which is the commercial capital of the province, there has been an appreciable increase in bank clearings. During the month of June, St. John's bank clearings exceeded those of the same month last year by $93,622. For the week ending July 15th, the clearings were $1,901,522, as against $1,698,156 in 1913. Lumber shipments, both to British ports and to the United States, showed an increase.

During June, 1914, the lumber exports from St. John to the United States were valued at $199,8[illegible]8.14, as against $128,812.05 in 1913. The shipments during June, 1914, to British ports, amounted to 11,174,774 ft. spruce and 480,912 ft. birch, while in the same month in 1913 they were 9,217,387 ft. spruce and 4[illegible]6,5[illegible]6 ft. birch. Tax collections in St. John to July 15th, showed an increase over last year of $31,169.52. In land transfers an improvement is noticeable, though it is not likely that there will be any appreciable activity in real estate for some months to come. Industrial reports received by the board of trade show a better condition in New Brunswick, as does also the collections on the part of wholesale dealers.

Industrial Situation is Good.

The industrial situation in the province is encouraging. At St. John, there has been no cessation to the large harbor works that are in progress. The federal government has decided to ask for tenders for the extension of the breakwater at the western entrance of the harbor to Partridge Island. This extension will serve a double purpose, protecting the harbor from south-west storms and making more room for the erection of steamship piers.

The Atlantic Sugar Refineries, Limited, will open their new plant within the next two months. The finishing touches are being made to the machinery and equipment.

Two large hotels are being promoted in the city and considerable residential development is going on. Sussex, Moncton, Sackville, Chatham, Woodstock, Fredericton, St. Stephen and St. Andrews, are all showing industrial progress.

Crop Conditions Better.

The secretary of the St. John board of trade has received a report from the agricultural department of New Brunswick, indicating a marked improvement in crop conditions during the last fortnight. Warm showers over a large area of the province, followed by warm weather, have resulted in splendid growth. All grains are looking well, and the roots exceptionally well. It is a little too early to judge the potato crop, but the acreage is as large as last year, and as a whole they are looking well. There is an excellent set of fruit, despite the June frosts. The outlook is for a good harvest in all crops. The satisfactory conditions of the crops will doubtless exert a stimulating effect on the general business of the province.

◆

The Canada Bond Corporation, Toronto, has issued an attractive list of municipal bond offerings. This firm invite an exchange of securities now held by investors which will mature shortly or on which the return is not sufficient.

A hydro-electric power scheme is to be made to the city of Edmonton by a Montreal syndicate, headed by Mr. G. W. Farrell, Montreal. It is proposed to develop power on the Saskatchewan river at Rocking Rapids. The Sir John Jackson engineering firm, of London, England, are interested. There is already a power scheme before the city council, having been submitted by Messrs. Sanderson and Potter, N.Y., and Stanley Washburn.

PART TIME LIFE INSURANCE MEN

Mr. John I. D. Bristol, general agent of the Northwestern Mutual at New York, addressed the Detroit Life Underwriters' Association on part time life insurance men. He cited a number of instances of the evils of part timeism, and spoke of it as the greatest of all incentives to rebating. He declared that "rebating will last just so long as part timeism and helperism continue. It will cease when life insurance commissions are paid to life insurance men only." General agents, he declared who desire a new [illegible] would confine their business to agents devoting their entire time, talent and attention to the interests of their general agencies.

Part timeism and helperism are in line with the high pressure system of obtaining business that ended in the Armstrong investigation and offer the very perfect way by which an agent can secretly rebate. Any penalty for rebating can be evaded by the agent appointing a rebating partimer to write one application. Part timeism is the great detriment to the diffusion of life insurance knowledge and the curber of agency progress. He urged agents to take hold of this question and declared that if an advertising statement should be made that after September 1st next, no application could be written except by a duly authorized life insurance agent engaged in no other line of business, and that this was done in the interest and for the protection of policyholders, this would result in an enormous increase in business and the bringing to Detroit of many honest and desirable agents. With the payment of life insurance commissions to life insurance men only the great principle of co-operation would evolve at its best. The present need of life insurance is ability, and this is retarded and hampered by part timeism.

◆

BRITISH GOLD RESERVES

Sir Felix Schuster has again urged the necessity of increasing the British gold reserve. He called attention last week in London to the continued accumulation of gold in the great state banks of Europe. During the last twelve months, the Imperial Bank of Germany, he said, had added £11,000,000 to its holdings, raising it from £54,000,000 to £65,000,000, an increase in two years of £20,000,000. The Bank of France held £162,000,000, an increase in 12 months of £30,000,000. Russia had £159,000,000, this being £18,000,000 more than last year.

These additions to the various gold reserves were the result, not of natural commercial or monetary conditions, but of a deliberate policy, and certainly afforded considerable increase in the event of grave political or financial difficulties arising.

In the United States, he continued, new banking legislation had taken place, and some banks were preparing to enter the field of international banking competition.

◆

LOANS TO UNITED STATES FARMERS

Plans to make farmers' loans from United States postal savings funds are worked out in a bill presented to the House recently, by Representative Smith, of Idaho, and previously introduced in the Senate by Senator Gronna, of North Dakota. The country is to be divided into districts, each under a director of postal savings, who shall receive applications for farm loans. All loans are to be made on farm lands, modern equipment, or to assist prospective farmers. First mortgages will be required. The director may employ local appraisers when necessary. Loans may be made from $[illegible] to $[illegible] at 4½ per cent., to run from one to twenty years. With the passage of the bill interest on postal savings shall be [illegible] per cent., and depositors may increase their deposits to $[illegible] a month and hold a total of $2,500.

◆

The Collingwood Shipbuilding Company has received orders from the Dominion government for the construction of a steam hopper barge to cost about $[illegible]. The barge will be 165 feet long, 35 feet beam and [illegible] feet deep. She will be constructed of steel throughout and will be propelled by powerful engines of 8[illegible] horsepower.

"SOLID AS THE CONTINENT"

Every year shows a marked increase in the number of policies for large amounts placed with the North American Life.

The fact is significant.

It proves that the Company's financial standing and business methods stand the test of expert scrutiny.

North American Life
Assurance Company
Head Office: - TORONTO, CAN.

"Results to Policyholders" for The Great-West Life are now more pronounced than ever before.

Observe a typical acknowledgement from one of the Policyholders:

"I take this opportunity of thanking your Company for the very satisfactory settlement made me on Policy No. 1239, 20 Year Endowment. I paid in the twenty years the sum of $870 and received a cheque for the sum of $1,418, thus giving me a profit of $548, my money back and protection for $1,000 for twenty years. I beg to say that I consider this a most excellent investment."

Look into the Policies that are so obviously valuable.

MONTREAL TRAMWAY'S SITUATION.

Monetary Times Office,
Montreal, July 29th.

Montreal financial circles are again at sea over the tramway's franchise. That something went wrong a few weeks ago is no longer doubted. It was the conviction on the street that the matter was about to be closed finally at the city hall, and as a consequence the price of the stock of the tram-power company strengthened to around 52. It commenced to break again, immediately, and at the same time the word went round that something had happened. A few days later it was said that the controllers, who in large part have the matter in hand, had to give considerable study to the proposals and that the deal would probably not be put through during the present year.

The statement is now made that the members of the board of control have entered into an agreement not to discuss the franchise until August 3rd, owing to the fact that in the interval some of the members will be absent on holidays.

So far as Mayor Martin is concerned, he is said to favor a 38-year franchise. Previous to departing on his holidays he is said to have told a friend that he was prepared to give such a franchise and that the terms included working men's tickets on Sundays only, at the rate of 8 for 25 cents. He did not express his views on the subways matter, but it is said he favors the demand of the Tramways Company that the city guarantee the bonds.

It is understood that some of the controllers, who, in the first place showed a disposition to overlook Controller McDonald, who is regarded as the thorn in the flesh of the Tramways Company, are now for some reason consulting freely with him over the situation.

BANK OF ENGLAND RATE TO STAY

Sir Felix Schuster, chairman of the Union of London and Smith's Bank, Limited, at the semi-annual meeting last week, gave his usual review of home and foreign conditions. There had, he said, been observable a distinct contraction in industrial activities. But there had been no overtrading. Hence, the reaction was not likely to prove disastrous nor prolonged.

Concerning the prospects, Sir Felix mentioned the world-wide economic depression. This, he said, was due to excessive legislation and to overspending. Wages, too, were increasing faster than profits, but the decline in commodity prices, especially in cotton, should stimulate manufactures. Fundamentals, however, were sound and promising. The abundant harvest in America would undoubtedly stimulate trade.

The speaker expected money rates to be maintained and suggested that there was slight probability of a reduction in the Bank of England discount rate this year.

BIG OIL COMPANY ISSUE

An issue of £1,500,000 of preference shares by the British Union Oil Company is being arranged in London. This company now controls the Union Oil Company of California.

The capital will be £6,000,000, consisting of £5,000,000 perference shares and £1,000,000 ordinary; and the preference shares, of which £1,500,000 are about to be offered for subscription, will not only bear 6 per cent. dividend but will rank for 50 per cent. of surplus profits before the ordinary shares participate.

Earl Grey will be chairman of the company.

THESE CROPS ALL RIGHT

Mr. M. H. MacLeod, general manager of the Canadian Northern Railway, who has been making an inspection of the company's lines in the West, telegraphs that the Canadian Northern Railway will handle almost as much grain this year as last. The Canadian Northern territory, according to all reports, [illegible] part of the effects of the drought.

AGENTS WANTED

to sell the most satisfactory Accident Policy ever devised.

A new and revolutionary proposition in the field of Accident Insurance.

The EQUITY-VALUE ACCIDENT POLICY pays more for everyday accidents—the kind that really happen oftenest—gives more real insurance—than any policy ever known.

Backed by a national advertising campaign that will popularize it and create a demand for it—it will be easy to sell—people will want it.

You can sell three prospects where you used to sell one.

Remember—the first man to sell This Policy in your town will be the one to make the money.

Are you going to get in on this in your city?

TEXTILE BUSINESS IMPROVES

Mr. C. B. Gordon, president of the Dominion Textile Company, states that there is a noticeable improvement in the company's business, and that he believes a gradual improvement in all industrials is taking place. Mr. Gordon says that the company's orders had made a good gain in June, and also that although it cannot yet be definitely stated whether July will do as well, he thinks a slight increase for that month would be shown.

◆

A report of the earnings of the street railway of Port Arthur, Ont., for the first six months of the year showed a net loss of $20,709.74. The gross earnings for the six months amounted to $66,350.50 and the operating expenses to $51,905.72 leaving net operating earnings amounting to $14,444.78. The reserve for accidents and interest and sinking fund to be paid amounted to $35,154.52, making a net loss of $20,709.74

CANADIAN PACIFIC STOCK DOWN

When Will the Bottom be Reached? Market Talk

The decline of Canadian Pacific Railway stock [illegible] "How much did Canadian Pacific Railway drop [illegible]" is a current market [illegible]. Compared with the price of 28[illegible] at which the stock was [illegible] of the international markets, its price to-day of around 150 looks [illegible]. Any amount of buyers are ready with the cash to purchase but they want to be sure that the bottom of the present decline has been reached. Some thought wrongly, a few months ago, that [illegible] was the bottom. It is a ticklish subject for even the most adroit market prophet. Predictions vary as to when the low point will be reached just as much as they differ as to the causes of the drop. One man says he will buy after the collapse in the markets due to the first shot being fired in Ulster. Another says he will buy when the stock price touches 150—and at the present rate, it will not take long. Another well informed market operator thinks that the bottom will not be reached until this time next year.

One thing is certain. There has not been the attractive speculative element in Canadian Pacific Railway stock during the past few months as was the case in former years. The note issue in connection with the company's lands not long ago had a depressing effect upon the price of the stock, the news being received by all the international markets with bad grace. Since then, the stock price has persistently declined. Germany had a story then that another stock issue was contemplated in connection with its steamship service, but owing to Germany's disapproval of such an issue it was not made. That is but one of many market stories.

Germany a Heavy Seller.

Germany gets a lot of blame in connection with Canadian Pacific Railway stock, and as a matter of fact, deserves a good deal of it. In the early days of the present downward movement, Germany was a heavy seller. One authority says that in midsummer of the 1912, that country was holding as much as 45 per cent. of the stock, and that by the early part of 1914, its holdings had dropped to almost 5 per cent. Some are disposed to ascribe German antipathy to the stock to a movement to make a market in Berlin for Canadian Northern common stock, when that much discussed security is placed in the public, speculative arena.

The holdings of Canadian Pacific stock were in the following quarters, at the periods mentioned, according to the statement of Sir Thomas Shaughnessy, president of the road, given to *The Monetary Times* some time ago:

	Jan., 1911	June, [illegible]
Total number common stock shareholders	24,000	[illegible]
Number of common stock shareholders in Canada	2,500	[illegible]
Percentage of common stockholders in Great Britain	[illegible]	[illegible]
Percentage of common stockholders in Germany and France	[illegible]	[illegible]
Percentage of common stockholders in Canada and United States	[illegible]	[illegible]
Percentage of common stockholders in Colonies and other countries		[illegible]

Average Shares Held.

The average number of shares held by each shareholder of the Canadian Pacific Railway is 75.17. The total number of shares outstanding in May last was 2,600,000. These are held by 34,589 shareholders. The distribution of these shares is as follows:—

9,466 hold under ten shares each.
17,473 hold under twenty shares each.
26,834 hold fifty shares and under.
30,203 hold under one hundred shares each.
32,590 hold under two hundred [illegible]

Naturally, the recent movement has [illegible] of the holdings, but in what way it is not [illegible] at present.

In a recent statement Sir Thomas Shaughnessy [illegible] "It is not unlikely that the directors will [illegible]

[illegible]

Van Horne's Advice.

In London the other day Sir William Van Horne, [illegible] Canadian Pacific Railway stock, and [illegible] "The [illegible] is [illegible] as good as ever it was, and although there is a [illegible] in traffic compared with [illegible] last year, there is not the slightest reason for any [illegible] of the shares, and those who take advantage [illegible] will reap much benefit."

Many people agree with Sir William, but they are waiting [illegible] to be sure that the low figure has been reached—and that is a difficult guess.

In the meantime, the prophetic heart of Sir Rodolphe Forget surely must palpitate with joy at prophecies realized. It was he who many moons ago persistently predicted that Canadian Pacific Railway would go below 200. It has, more than 50 below.

* * *

BRITISH COLUMBIA PERMANENT LOAN COMPANY

After providing for all interest charges on terminating capital, deposits and debentures, and expenses, the net profits of the British Columbia Permanent Loan Company of Vancouver, for the six months to June 30, amount to $56,444. Out of this sum, $45,33[illegible], representing a dividend at the rate of 10 per cent. per annum, has been paid on the permanent capital, and the balance, $11,110, added to the balance brought forward from 1913, $14,[illegible], and the premium account gives a total sum of $70,665 carried forward to the second half of the year in profit and loss account. The permanent capital now stands at $9[illegible],957, surplus, $[illegible]9,514. The assets are now $4,[illegible]15,693, of which $[illegible]1,148,[illegible] is first mortgage loans on the company's monthly payment plan. Care in the selection of loans is being exercised owing to the uncertain business conditions and high land values which everywhere obtain.

Loan applications considered by the directors this year total almost $1,000,000. Many requests were rejected altogether, and in other cases the amount granted did not please the applicant and was refused. Forty per cent. of a very conservative valuation is seldom exceeded. [illegible] the securities obtained this year are particularly choice. Applications now under way amount to only $[illegible], the lowest [illegible] figure in several years. Collections are very satisfactory.

Loan on General	$248,629.46
Loan on Water Works	90,761.01
Loan on Local Improvements	1,058,236.44
Loan on General Debenture Account	149,431.86
Loan on Water Works Debenture Account	169,150.14

UNEXPENDED DEBENTURE BALANCES—

Water Works Department	$43,242.50
General Account	39,498.35
Electric Department	99,461.38
Schools Account	102,473.16
	$2,052,682.64

While Ottawa's current assets are $115.378.34 less than current liabilities, the greatest deficiency is $134,000.21 in water works, which is accounted for by extraordinary expenses in improvements. When one considers that Ottawa has an excess of $2,632,733.79 in capital assets over capital liabilities, besides an assessed value in ratepayers' properties of $100,000,000.00 for revenue purposes, it can easily be seen that any reasonable deficiency in the current operation of one year can easily be taken care of in the future.

OTTAWA.—The Capital of Canada

OTTAWA, the capital of the Dominion of Canada, is governed by a Board of Control composed of a Mayor and four Controllers, and a Council of eighteen Aldermen.

Ottawa has an area of over 5,000 acres, owns her own water works and electric light system, has about 20,000 houses, 84 public buildings, 24 public schools, 29 separate schools, three high schools, one university and about 10 colleges, one free library and one parliamentary library, also geological museum, 67 churches, about 13 convents, 22 charitable institutions, 24 hospitals and asylums, 62 hotels, about 72 restaurants and cafes, 119 wholesale houses, 192 industries, five daily newspapers, 13 theatres and amusement places, 70 apartment houses, over 30 clubs, 19 Government buildings, 13 parks, seven steam railways entering the city, eight water transport lines, 40 miles of paved streets, including Government Driveway, 47 miles of electric street railway, which average 88 cars daily, 154 miles of streets, 159 miles of water mains, 174 miles of concrete walks, 115 miles of sewers, 38 banks and branches against 13 ten years ago, 11,000 telephones in use, over 100 insurance companies represented, two telegraph companies, three express companies, 400 Board of Trade members, about 84 policemen and 94 firemen, and over 5,000 Government employees. Ottawa has over five miles of whiteway lighting.

Bank Clearings, 1913	$207,667,008.00
Customs Revenue, 1913	1,679,943.10
Postal Receipts, 1913	153,601.52
Building Permits issued 1913—Value	3,991,380.00

Net Debt, 1913, represents less than three years' revenue.

Net per capita debt	$76.62
Canal tonnage, over	392,350 tons
Railway tonnage, over	1,500,000 tons
Industrial payroll, 1910 census	$4,614,372
Government payroll, over	$5,000,000
City payroll, over	$1,000,000
Births, 1913, per 1,000	26.13
Marriages, 1913, per 1,000	10.38
Deaths, 1913, per 1,000	19.25

Nearly 1,000,000 water power within transmission distance.

Industrial capital employed, 1910, $21,098,994.

The Dominion Government spends annually a large sum towards improving the city.

Ottawa's assessed taxable value rate and population for the past five years, and including 1914, is as follows:—

Year.	Assessment.	Rate P.S. $100.	Rate S.S. $100.
1910	$55,175,811	2.22	2.58
1911	63,287,155	2.155	2.565
1912	76,169,219	2.015	2.445
1913	95,720,676	1.93	2.43

	Population.
1910	86,106
1911	90,520
1912	95,570
1913	100,180

Real property is assessed for about 75% of market value.

Assessed Value of Taxable Property for 1914:—

Real Property	$87,424,113
Income	2,998,467
Business	9,735,507
	$100,158,087

As Things Are in the British Empire

ONCE again British diplomacy has played fairly, satisfying the most delicate conscience. Once again it has maintained the British standard of honor, this time at the expense of valuable points in warfare, now gained by the enemy. Germany having pushed war, it has challenged a nation which has strained every diplomatic nerve and sinew to preserve peace. Flouting Britain's heroic determination to strangle war, now it must face that determination in a grim shape. It is not war upon Great Britain alone. It is a challenge to the Empire, one which has done for civilization more than other Empires have even tried to dream. That challenge the Empire has answered. Canada, Australia, South Africa, every dominion overseas join with the Motherland in this international struggle, one into which that Motherland has done everything possible to prevent the Empire having to plunge. Victory on one side may mean a new map of Europe, the flowering of autocracy and the predominance of belligerence. Victory where the British Empire may place it, will mean the preservation of individual nationalities, the progress of democracy, always arbitration and perhaps lasting peace.

Seldom has England girded its loins in such a good cause, especially as the struggle has been forced upon it. Heaven knows of the prayers which have been offered and the statesmanlike efforts made for peace. War has come to bring it. Having entered the fight, the British Empire will proceed to the end. In this struggle it has the help of some and the sympathy of all, except perhaps two, of the civilized nations of the world. May Right ride as conqueror!

As Things Are in the Business World

ALL can make guesses, but not one can prophesy with hall-marked accuracy. What will war mean to the business world? It is impossible to predict. The files of history have no parallel. Modern finance and business have been practically unchallenged in modern times. Never before have they had to meet the modern war giant, armed to the teeth. They encounter him now on stock exchange floors, in the rooms of bankers, in shipping lanes, and wherever else finance and commerce are known. Never before has the modern war giant struck credit to the ground and peremptorily told business to wait until it had got through with its own brand of business. The ancient giant had done such things, but clumsily. Then, business was clumsy and disjointed too. Since those days, business has acquired extensive international proportions and credit, with a sensitiveness unequalled, has cobwebbed itself around the globe. The war giant has acquired the wireless and the aircraft, and trappings which have transformed him completely, putting his ancient brother in history's niche.

Now, for the first time, modern business and modern warfare meet. The former scarcely knows how to turn because the latter has halted it sharply. No records are there to dictate what must be done. The situation is a new one. Having gathered the data in 1914 and after, they will be available for future occasions. But having gathered the data in 1914 and after, business and finance may have to insist that there shall not be any such future occasion. In the meantime, the most obvious sign to business and finance is Caution.

As Things Are in This Dominion

CANADIAN banks are in a strong position. Canadian bankers will do their utmost to safeguard the interests of Canadian business, finance and industry. No one with a proper basis of credit should be able to complain justly of unfair banking treatment,—but there must be that basis of credit and borrowers must recognize the position as it exists outside the Dominion's boundaries. The internal position of Canada is one of strength, but there are important external influences.

Naturally, there will be some business troubles. They would have come anyway as the result of the subsidence of the recent speculative fever and of the present trade depression. The war will hasten those breakdowns, and we may hope that they will not be of too serious a nature.

Business cannot anticipate any extension of credit. It should be satisfied, in these times when the credit machine the world over is broken, with reasonable support.

The June bank statement, which was issued last week, showed that the chartered banks of Canada have the situation well in hand. Demand deposits made a substantial increase, savings deposits remaining at practically the same figure as in the previous month. Current loans in Canada did not decline and circulation increased. The June bank statement gave many signs of comfort. The July statement, to be published at the end of this month, should reveal even a stronger position.

The solid banking position is made even more substantial by the announcement of the Dominion Government this week that it stands ready to issue Dominion notes to such an amount as may be necessary against securities deposited by the banks and approved by the minister of finance. The government has also authorized the chartered banks of Canada to make payments in bank notes instead of in gold or Dominion notes, until further notice. This action will protect the Canadian gold supply against demands from foreign sources.

The government further has authorized the chartered banks to issue excess circulation to an amount not exceeding 15 per cent. of their combined unimpaired paid-up capital and reserve, from the present time until further official announcement. This authority puts in operation two months ahead of time the emergency circulation already legal for crop movement purposes from October 1st to January 31st in the following year.

These measures may not be necessary. Indeed, despite the international conflict in Europe, the probability of the use of such measures appears now to be remote. However, the Dominion government's action considerably strengthens the position, already strong, of the Canadian banks. It means, in short, that the government and the banks will co-operate to prevent financial panic and industrial disaster as far as is within their power.

Those who hold securities need not wail because the stock exchanges are closed. Canadian exchanges can well afford to follow the example of London. Indeed, they were compelled to do so. Had the exchanges everywhere remained open, securities would have been sacrificed at prices which would mean nothing except war and that a terrible fear had seized the holders of securities the world over. The intrinsic value of good securities is under the shadow of war. When peace comes the intrinsic value of good securities will be revealed again, expressing itself in the figures of stock exchange quotations. Bankers and brokers are dealing with the situation in a way that is justified by the extraordinary events of the past few weeks. The policy of the bankers regarding call loans, in their relation to the stock market, is not harsh.

Britain has lent Canada large sums during past years. These borrowings, on the part of the Dominion, must cease for the time being. War has stopped them. War will make citizens everywhere practice economy. The United States will have an opportunity to show its strength as one of the very few minor lending countries, by financing Canada's immediate needs.

The Dominion must expect to suffer in various directions as the result of a great international struggle of arms. That will be the lot of many countries. The Canadian wheat crop should be valuable, if it can be shipped. War prices must obtain on the stable commodities. The cost of living, unfortunately, will be regulated in Canada to some extent by those prices.

Canadian authorities during the past few months had agreed that the process of readjustment in this country, due to the decline of unusual speculative activity, the end of a period of unusually active construction, and to trade depression, would take two or three years. There is readjustment of labor, of rents in cities and towns, in the ownership of speculative holdings, and in many other things. No permanent confidence could have come until that readjustment had run its course. Canada in times of peace was preparing for this in every possible way. In this time of war, therefore, that preparation makes effective armor against the assaults of the adverse forces of economics.

Sterling Exchange Suspended

(Specially contributed to *The Monetary Times*).

The sterling exchange market is completely suspended. No rates are being quoted now, although in some quarters a few days ago, demand sterling was nominally given at $5.20, and cable transfers at $6.

The Moratorium Bill in England has passed the House of Commons, the House of Lords, and has received the Royal assent. The effect of this bill is to postpone indefinitely settlement of all foreign transactions. Domestic business, however, is able to proceed.

With such a condition in England it is practically impossible to trade. Nations can neither undertake to pay nor to receive payment for any sterling which may be required or offered for purchase. Under these circumstances, cover cannot be obtained by the foreign banks, who therefore cannot instruct their London agents to make any payment.

On this side, a vast amount of cover is provided by grain bills, which are mostly drawn against bank credits. Now, all foreign credit is curtailed. An alternative is to ship gold, but there is the danger of its getting into the wrong hands.

This possibility is strikingly illustrated by the voyage of the North German Lloyd Steamship "Kronprinzessin Cecilie," carrying more than $10,000,000 gold and $1,000,000 silver, consigned to English and French bankers. She had left New York on Tuesday, July 28th, and was generally expected to be in European waters instead of which she turned up in Bar Harbor, Maine, the captain having decided to return to America. The gold, therefore, did not reach its destination.

Again, a Berlin dispatch on Tuesday stated that German military officers at Stuttgart reported to the German war office their seizure of $20,000,000 in gold, consigned to Russia. The gold was part of a shipment forwarded to Russian banks for use of the Czar's government.

In such times as these, the only effective way to protect gold shipments from one country to another is by a fleet of battleships. That is the only assurance worth having, and, as it is not forthcoming, settlement of foreign accounts must be delayed. This is the reason for the Moratorium Bill.

Europe's War Breaks the World's Credit

EXTRAORDINARY *measures taken everywhere—Ten per cent. Bank rate—Exchanges closed—Settlements postponed—Sterling exchange suspended Canada's strong banking position made still better by Government's offer.*

Sterling exchange is completely suspended.

World's stock exchanges are closed until further notice.

All European bank rates have advanced to high figures.

Great Britain on August 2 announced a moratorium for a month. This defers cash settlements.

Bank of England recommended and government agreed to extend last Monday's bank holiday for three days until to-day.

Dominion government has authorized Canadian banks, if necessary, to issue notes against their securities, to pay in bank notes instead of gold, and to issue excess circulation.

Marine insurance rates are advancing to record figures.

London stock exchange committee has postponed the settlement due on August 13, and the Consols settlement due on August 6.

British government has guaranteed war risks on wheat and flour shipped from Canada or the United States to Great Britain under existing contracts.

The Bank of England rate is 6 per cent., having stood at 10 per cent. from Saturday, August 1st, to Thursday, August 6th. On July 30th, it was raised from 3 to 4, on July 31st, from 4 to 8, and on August 1st, from 8 to 10.

Details of the above and other matters are printed below.

A MONTH ago, a Servian student in Austria shot and killed royal personages. To-day, as a result of that and other excuses, Europe is engaged in terrible war—war such as for the past half century has been the plot of a hundred novels. It was considered perhaps a possibility but yet highly improbable. A month ago, the man who would have predicted to-day's events would have been jeered. To-day, they are here, and so suddenly, that the human mind can scarcely comprehend their gravity.

A month ago, there was glib chatter that extensive war was impossible, because capital is thicker than water. To-day capital is shaking in its shoes, credit is hung on a peg, business is approaching paralysis.

From the humanity viewpoint, the whole thing is appalling. Put the blame for actual hostilities where we may—and it seems to rest heavily on the shoulders of Austria and Germany—there remains the fact that these and other nations are, in what we have called the zenith of twentieth century civilization, destroying fine cities, sinking modern battleships—themselves great floating communities—taking human life. It was said, "There cannot be a great war because war destroys capital and capital is everywhere." Unfortunately, the premises were right and the conclusion wrong. Capital is riddling itself with bullets and blowing to atoms in time of war, its work fashioned in times of peace. Nations, to settle their disputes, to gratify ambitions, to satisfy jealousies, are resorting to brute force. One day, perhaps, banking and finance will control the desire for war, so as to make it impossible. Instead, in nineteen hundred and fourteen, the desire and conduct of war is, for the time being at least, controlling banking and finance. It has shut the stock exchanges of the world. It has made big national banks stagger, it has broken down the credit machinery which stretches to every point of the compass, crossing and re-crossing everywhere. It has made commerce afraid and business stand still. It yet may paralyze completely for weeks and months. The cable line is censored and cut. Commercial ports have become naval and military centres. Shipping is demoralized. Insurance is a high-priced luxury. Stock exchanges must refuse to do their work. Settlements are postponed. In short, the financial and business world in all quarters of the globe, must put up its shutters because half a dozen nations of Europe have strained the war machine to a nerve-racking tension, and one of them, maybe two, have touched the crank.

From the financial viewpoint, the present crisis is remarkable. In previous European crises, there has been widespread financial disaster preceding. On this occasion, the climax has come not because of great troubles in the financial community itself, but from the business and financial world's preparation for and anticipation of war's events and of financial disaster to follow.

Finance and credit saw the war storm approaching. They stood aside and allowed their partner, diplomacy, to do the best it could. Finance and credit have failed as the policemen and dictators, although one day they may succeed. Now, they have spectators' roles.

When credit sits glum in the background, business only ambles and it frequently halts. The striking phase of the present situation is the manner in which war has struck at the heart of credit and business the world over. In a day, it has been shown that the international interdependence of credit is a wonderful thing. So extensive and sensitive is finance and its credit network, that the touch of war in one place has broken down the entire web. Will it ever be that the touch of that web in one place will break down the first frowning signs of war and war itself? We must pray now for the success of British arms. Success coming, may it labor for the substitution of capital and credit in the place of bullets and bombs—capital and credit which could be made just as deadly, and yet the difference is one important missing link in our chain of civilization.—Fred. W. Field.

Ten Per Cent. Bank of England Rate

Bank has Raised It to that Figure only Twice Previously—Remarkable Record Last Week When Rate was Raised Three Times on Three Consecutive Days.

THE Bank of England discount rate was raised to 10 per cent. on Saturday, August 1st, having been raised from 4 to 8 on Friday, and from 3 to 4 on Thursday. The rate had stood at 3 since January 29th, 1914. These increases were made to conserve the gold holdings of the bank. The ten per cent. rate has been equalled previously only on two occasions—in 1857 and 1866. In the latter year, it remained at 10 per cent. for three months. This rate was largely due to the crisis caused chiefly by the Gurney failure. In that year, the rate was changed fourteen times altogether. Last year it fluctuated only twice. Last week it was changed thrice.

In 1857, when the rate was also at 10 per cent., it was changed on nine occasions. The high figure was due to the effects of the Crimean War (1854-1856), and to numerous bank failures subsequently.

Seven Per Cent. in 1907.

The only occasion in modern times on which the rate has been unusually high was in 1907, when on November 7th it was raised to 7 per cent., and remained at that figure for 54 days.

The scene and situation in London upon the raising of the rate last week is described in a cable message as follows:—

"There has been nothing whatever in the nature of a panic or a run, but officials have been quietly paying out gold and silver since the European powers had decided to engage in a struggle for supremacy. There was nothing to give the public hope that a general war might be averted.

"While there has been little or no excitement such as might have been witnessed in other cities during a financial crisis of the dimensions of that which London is going through, the scenes in the city to-day were unlike any since the great Gurney Bank failure for $55,000,000 in 1866, when the government found it necessary to suspend the bank act so that the Bank of England would not be compelled to pay gold for its notes.

All Wanted Gold.

"The main entrance to the Bank of England was besieged by holders of notes waiting to have them changed into gold, and in the afternoon the crowd became so great that the gold-laced officials formed the people into lines in the big quadrangle. Most of them were messengers from the smaller banks or from business houses.

"At the other frontage of the bank, which is not far from the stock exchange, dozens of two-horsed drays were drawn up awaiting their turn to get into the gate to be loaded with gold and silver, which the banks throughout London were getting in exchange for Bank of England notes held by them."

Remarkable Record Last Week.

The raise in the bank rate to 10 per cent. last week creates a remarkable record. This year, in January, the rate was as low as 3. The fluctuation therefore has been 7 per cent. Not only that, the rate was raised three times in as many days. The greatest change in any one year previously was in 1866, the period of the last crisis, when the aggregate fluctuation in the rate was 6½ per cent. The lowest rate in that year was 3½ per cent., the highest rate, 10 per cent. In five other years, the fluctuation varied from 5 per cent. to 6 per cent.

The fluctuations in order of severity from 7 per cent. to 5 per cent. at the Bank of England, have been as follows:—

Year.	Lowest rate	Highest rate %.	Fluctuation %.
1914	3	10	7
1866	3½	10	6½
1873	3	9	6
1858	2½	8	5½
1847	3	8	5
1861	3	8	5
1863	3	8	5

A glance at the detailed table accompanying shows that on many other occasions the fluctuations at the Bank, though not so severe, were very sharp as for instance, in 1857, when though the total fluctuation was only 4½ per cent., it was between a rate of 5½ and 10 per cent.

Year.	Lowest rate.	Highest rate.	Fluctuation.
	Per ct.	*Per ct.*	*Per ct.*
1844	No change		
1845	2½	3½	1

1910	3	5	2
1911	3	4	1
1912	3	5	2
1913	4½	5	½
1914	3	10	7

Fluctuations This Year.

The following are the changes in the Bank of England rate this year:—

	Per cent.
1913.	
October 2	5
1914.	
January 8	4½
January 22	4
January 29	3
July 30	4
July 31	8
August 1	10

It is extremely rare for any change to be made in the Bank of England rate on any day except Thursday. Instances occur rarely when some sudden change of position makes it essential, as at the end of 1906, when the bank rate was raised to 6 per cent. on a Friday morning. In normal times the rate which is fixed on one Thursday is maintained until the next, though the rate is only a minimum and the Bank of England occasionally takes advantage of this fact and refuses to discount at its minimum, which still remains ostensibly the bank rate, while the bank actually makes a rather higher charge, which is usually made the official rate on the next Thursday.

The Bank of England rate was reduced from 10 to 6 per cent. on Thursday, August 6th.

◆

CANADA'S STRONG BANKS MADE STRONGER

Dominion Government Takes Proper Precautions—It Is Ready to Help the Banks

The Dominion government has taken steps to prevent any financial crisis in Canada, and has authorized the banks, if necessary, to issue notes against their securities. They are also authorized to pay in bank notes instead of gold and issue excess circulation. The Canadian banks are in excellent condition, and may not have to resort to the measures provided by the government. It is quite proper, however, to be well prepared for any possible emergency. The banks of Canada for months past have been placing themselves in a strong position to cope with the trade depression and other elements in times of peace. They are ready, therefore, to handle, in the safe and conservative manner of British banking, any emergency caused by war.

May Not Be Necessary.

The official statement issued by the Hon. W. T. White, minister of finance, is as follows:—

"Having regard to the world-wide financial crisis which has developed upon the outbreak of hostilities in Europe, and in view of the action of the Imperial government for conserving the financial and commercial interests of the United Kingdom, the minister of finance announces on behalf of the Dominion government, while it is not probable that such action on its part will be required, it stands ready to issue Dominion notes to such amount as may be necessary against securities deposited by the banks and approved by the minister of finance.

"The minister of finance further announces that the government has authorized the chartered banks of Canada to make payments in bank-notes instead of in gold or Dominion notes until further official announcement in that behalf. This action will tend to conserve the Canadian gold supply against demands from foreign sources, a course now being followed by all the leading nations of the world.

May Issue Excess Circulation.

"The minister further announces that the government has authorized the chartered banks of Canada to issue excess circulation to an amount not exceeding 15 per cent. of their combined unimpaired paid-up capital and rest or reserve fund from this date until further official announcement.

"Any necessary special legislation will be obtained at the next session of parliament.

"The minister further announces that the government is prepared, if necessity should arise, to give every possible assistance in order to prevent any avoidable interruption of stable business conditions, and for this purpose it will not hesitate to use to the fullest extent all existing powers, and to ask further powers from parliament if that course should seem necessary or expedient."

◆

"England has tried consistently to secure peace. It was not possible, however, because of the briefness of the time and the disposition in some quarters to force matters rapidly to an issue. If in a crisis of this kind we ran away from our obligations of honor and interest with regard to the Belgian treaty, I doubt whether whatever material force we might possess at the end would be of much value in face of the respect we should have lost. So far as the forces of the Crown are concerned, the Premier and First Lord of the Admiralty have no doubt whatever of their readiness and their efficiency. They never were at a higher mark of readiness. There never was a time when confidence was more justified in their ability to protect our shores and our commerce."—Sir Edward Grey, in the British House of Commons.

WHY LONDON CLOSED EXCHANGE

Action Was Made Compulsory—Prices Dropped But Shares Did Not Change Hands

The closing of the London stock exchange on Friday last week, the last of a long line of exchanges, revealed how serious was the breakdown in finance and credit due to war and its alarms. A Windermere cable message from London, a service which *The Monetary Times* enjoys, said:—

The closing of the London stock exchange was made compulsory by its unprecedented position as the clearing house for international business consequent upon the demoralization of the continental bourses. The feelings of national pride made the idea most unwelcome to stock exchange committees, but the necessity was imperative. When London was made Europe's dumping ground the prices continued to drop without shares changing hands, consequently there was no relief to the holders. The postponement of Paris settlement was the last straw which threatened to involve many London firms."

Exchanges Closed Everywhere.

Other dispatches from London stated:—

"The stock exchanges in London and the big provincial cities as well as those on the continent were closed owing to the breakdown of the credit system, which was made complete by the postponement of the Paris settlement."

"Fifty brokers informed the stock exchange committee that they would be compelled to default on account of the postponement of the Paris settlement, and it is believed another fifty would have gone to the wall if the market had not been closed."

"Bankers here had been trying for days past to get their customers to take up this stock but the impossibility of finding cash and the inability to sell the securities caused credit business automatically to cease and the closing of the exchange became necessary.

"Bankers opposed the closing of the exchange at first, fearing that the effect upon the public would be worse than a continued nominal fall in securities. Later they agreed that a rest would be advisable."

In Toronto and Montreal.

The markets for public securities which were closed on Friday, July 31st, included the following:—London stock exchange, Manchester stock exchange, New York stock exchange, Liverpool stock exchange, Chicago stock exchange, Boston stock exchange, Pittsburg stock exchange, New York cotton exchange, Philadelphia stock exchange, New York coffee exchange, New York consolidated exchange, New York curb, Winnipeg stock exchange, Glasgow stock exchange, Edinburgh stock exchange.

The Toronto and Montreal stock exchanges were the first to close on this continent on Tuesday, July 28th, the Vienna exchange having closed on the previous Saturday. It is stated in Montreal and Toronto that strong "pools" have been formed to support stocks in case they show any tendency to decline at an alarming rate. The Canadian exchanges naturally will not open before the London and New York exchanges have taken up business again.

As a result of the financial panic and stock exchange fluctuations, there have been failures of stock exchange, financial, cotton and grain houses in London, New York, Berlin, and other centres. The National Penny Bank of England has suspended payment.

Banking Position Strong Here.

The banking position in Canada is exceptionally strong, the chartered banks having been trimming financial sails for nearly three years. A certain number of commercial, financial and industrial failures, however, can scarcely be avoided in such times as these. Some unfortunately must be expected.

◆

The Bank of England directors on Monday met and decided to recommend that the Government extend the bank holiday (August 3) another three days till Friday. The extended "holiday" is intended to apply only to the banks to enable the Government to take emergency measures, one of which is the issue of one-pound notes, which, although unofficially announced, is being carried into effect as rapidly as possible, and it is expected will be ready the beginning of next week. If further small currency is needed postal orders will promptly be made available.

STOCK EXCHANGE SETTLEMENTS POSTPONED

London Committee Announces the Fact—Reasons for Extreme Action

On Friday, July 31st, the London stock exchange committee announced that the settlement due on August 13th had been postponed until August 27th, and that the Consols settlement due on August 6th had been postponed until September. A continuation of the rates on existing speculative accounts thus prolonged is being fixed by the committee, based on the bank rate. Stocks which have yet to be delivered for the account just closed must, however, be paid for.

The chief reason for the unprecedented action of the London stock exchange committee was the fact that the system of credit had practically broken down and it was impossible to carry on business in the ordinary way. This situation did not arise through over-speculation, but because bankers could not collect margins which had been gradually shrinking, while at the same time the continent continued to pour stocks into London.

London Stock Exchange Settlement.

What does the London stock exchange settlement mean? The best reply is perhaps given by a well-known financial authority of London.

Business in the London stock exchange is complicated by the fact that a large number of the securities in which it deals are not to bearer, but registered and transferable by deed. In the case of a bearer security, the buyer pays his check, or passes over currency or any acceptable form of credit instruments, takes his bonds or shares, the possession of which is in itself evidence that he is their owner, and the bargain is concluded. And thus, in settling business in securities of this kind, it is merely a question of bringing the real buyer and the real seller together through the machinery of the clearing house and the thing is done. But when registered stock and shares are transferred, the process is much more complicated, for in this case nothing passes from seller to buyer which gives the latter immediate possession. A holder of these securities is registered as such in the books of the company, or, in the case of government and municipal stocks, of the bank or other agent that keeps the register, and only possesses a certificate stating that he is so registered, which is a mere memorandum carrying no evidence of title.

Deed of Transfer.

The transfer from one holder to another is effected by a deed of transfer, to which this certificate is usually attached, and consequently before the bargain can be completed it is necessary that the selling broker should be informed of the name, address, and style of the transferee to whom the stock or shares are to be passed, so that he may be enabled to make out a deed of transfer, signifying that, in consideration of such and such a sum paid by A. the transferee, B. the transferrer sells to him so much stock or so many shares. This deed, duly stamped and either certified or accompanied by the certificate, being delivered to the buying broker, he pays the consideration money and lodges the deed with the company, whose securities are transferred, or with the agents of the government or municipality, and his client the transferee is then registered as their possessor.

The complication introduced by this necessity for the preparation of a deed of transfer makes the business of the settlement in London a lengthy process. It involves the preparation by the buying broker of a form called a ticket, stating the name, address, and description of the client to whom the stock is to be transferred, and this ticket is passed to his seller, and so on through intermediate sellers to the real seller, or the party who is prepared to deliver the stock. In the case of most active securities this passing-on process is effected through the clearing house but in others the ticket is passed on by one firm to another in the settling room.

Fortnightly Settlements.

Hence it is that four days are required for the fortnightly settlements at which all bargains in London are completed, unless specially executed for cash or for a later settlement. The first two days are called the contango, carry-over, or continuation days; on the first of them the account in mining shares is carried over; on the second, the account in other markets, except the consols market; on them brokers who have bought or sold securities for clients who do not intend to take them up or deliver them, but propose to continue the bargains with a view to covering them at a profit, make arrangements to this end. Every bargain by the rules of the house has to be completed at the settlement, and therefore stock which has been bought and is not meant to be taken up has, on contango day, to be sold for cash and simultaneously bought for the new account.

These carry-over bargains are all entered at the "making up" price which is fixed by the dealers at noon on contango day. And since a buyer is thus released from his obligation to find cash for his purchase he is charged a rate for the accommodation. This rate varies according to the state of the market in the particular stock—in cases where there is a large bull account in a market well supplied with stock the rate is frequently out of all proportion to the rate ruling for money; but when a stock happens to be oversold the rate may "run off," and a bull may continue his stock "even," or is sometimes paid a "backwardation"—a fine paid by bears of stock that they can not deliver.

On Speculative Account.

A large proportion of stock open on speculative account is thus settled by bringing the bulls and bears together, and any balance of stock open is arranged by jobbers or brokers taking up the stock for the speculator on his paying stamp and fee and a fair rate for the accommodation.

The third day of the London settlement is devoted to the passing of tickets described above, setting forth the names into which stock and shares are to be transferred, and this day is consequently called ticket or name day.

On the fourth day bearer securities and transfer deeds of registered stocks are delivered to the buyers and the consideration money is paid; but it should be observed that ten days' grace are allowed for the delivery of registered stock, to give time for the seller to sign the transfer and for the deed to be certified.

Last Day of Settlement.

It often happens, of course, that the seller is not parting with the whole of his holding in a stock, and therefore is not prepared to give up his certificate to be attached to the transfer deed and delivered to the buyer. In these cases the certificate and transfer deed are forwarded either directly to the company, or through the secretary of the share and loan department of the stock exchange, and the transfer deed is certified as in order. A certain amount of time is obviously required for the execution of these formalities and for the procuring of the signature in cases where the transferrer may happen to be abroad. On this last day of the settlement, which is usually called pay day, or account day, or settling day, all differences are paid arising out of speculative transactions.

It should be added that if a seller of stock does not receive a ticket by the proper time on ticket day, informing him into whose name it is to be transferred, he can "sell it out"—that is, sell it to some other buyer, and any consequent loss falls on the party who is responsible for the delay in passing the ticket. Similarly, a buyer who has passed a ticket and has not had the transfer deed delivered after the ten days of grace allowed, can "buy it in"—that is, buy the stock for cash from some other seller.

◆

"A great war in Europe will probably bring economic advantages to the United States. It will enable it to sell its great crops in places which will give a much greater income than if there was no war. It is obvious that for the time being the money markets of Europe will be closed to the demands for new capital of Canada, Brazil, Argentina, Mexico and other countries, and at such a time the prestige of the United States would be immensely enhanced if it were to take the place of Europe and meet the pressing needs of these borrowing countries."—London Statist.

The United States decided to issue emergency currency immediately to facilitate the crop movement and supply every other requirement of business. It was decided that $100,000,000 of the new currency, which is that authorized by the Aldrich-Vreeland law, should be issued through New York. At the request of the state superintendent of banks, representatives of the New York State Savings Bank Association decided to demand sixty days' notice of withdrawal of deposits, except in very small amounts. Similar action was subsequently taken by private banking houses, except that in the case of the latter only thirty days' notice will be required. The New York Clearing House Association decided to adopt a certificate basis, in the belief that "every means should be adopted to protect the gold supply in the United States." The association also adopted a resolution making available for the payment of balances all forms of currency issued under the authority of the National Government.

POSSIBLE BRITISH BANK ACT SUSPENSION

Why and How It Was Done in Sixty-six—Has Been Suspended Only Thrice

A London cable message on Friday, July 31st, said:—

"The opinion is general that the bank act will be suspended, and it is argued that when the gold once gets out of the hands of the bank there is nothing to prevent it being sent abroad."

Another dispatch said:—"A deputation of the leading bankers called on Premier Asquith this evening for the purpose of requesting him to suspend the bank act, according to a local agency. The Premier promised to consult the Chancellor of the Exchequer, and to consider the request fully."

Later, on July 31st, it was announced that the conference consisting of the Premier, the Chancellor of the Exchequer and representatives of the Bank of England and other great Banks, decided that the situation did not at that time justify any emergency action to increase the supply of legal tender. If, however, future events necessitated it the treasury would take immediate action.

What Suspension Means.

The Bank of England's fiduciary issue was originally £14,000,000, but it has since been increased to £18,450,000. Beyond that amount it cannot go except by means of the suspension of the bank act.

The suspension of the bank act in England is an extraordinary measure for serious times. Only on three occasions since 1844, (the year the present bank act was enacted), has it been done. The reason for the suspension of the act is to allow the bank to extend its discounts and advance beyond the limit fixed by law. The discount rate naturally is high,—in 1866, for instance, 10 per cent. The British government announced on August 5th that the suspension of the act is unnecessary, "at least for the present."

What Government Wrote in 1866.

The best way perhaps to define clearly what such a suspension means is to quote in full the letter written by the British government to the Bank of England authorities at the time the Act last was suspended. This *The Monetary Times* is able to do. The communication was dated May 11th, 1866, and was as follows:—

To the Governor and Deputy-Governor of the Bank of England.

Gentlemen,—We have the honor to acknowledge the receipt of your letter of this day to the Chancellor of the Exchequer, in which you state the course of action at the Bank of England, under the circumstances of sudden anxiety, which have arisen since the stoppage of Messrs. Overend, Gurney & Co. (Limited) yesterday.

We learn with regret that the bank reserve, which stood so recently as last night at a sum of about five millions and three quarters, has been reduced in a single day by the liberal answer of the bank to the demands of commerce during the hours of business and by its great anxiety to avert disaster, to little more than half of that amount, or a sum (actual for London and estimated for the branches) not greatly exceeding three millions.

The accounts and representations which have reached Her Majesty's Government during the day exhibit the state of things in the city as one of extraordinary distress and apprehension. Indeed, deputations composed of persons of the greatest weight and influence, and representing alike the private and joint stock banks of London, have presented themselves in Downing street and urged with unanimity and with earnestness the necessity of some intervention on the part of the state to allay the anxiety which prevails, and which appears to have amounted, through great part of the day, to absolute panic.

There are some important points in which the present crisis differs from those of 1847 and 1857. Those periods were periods of mercantile distress, but the vital consideration of banking credit does not appear to have been involved in them, as it is in the present crisis.

Again, the course of affairs was comparatively slow and measured; whereas the shock has in this instance arrived with an intense rapidity, and the opportunity for deliberation is narrowed in proportion. Lastly, the reserve of the Bank of England has suffered a diminution without precedent relatively to the time in which it has been brought about, and in view especially of this circumstance Her Majesty's Government cannot doubt that it is their duty to adopt without delay the measures which seem to them best calculated to compose the public mind, and to arrest the calamities which may threaten trade and industry. If, then, the directors of the Bank of England, proceeding upon the prudent rules of action by which their administration is usually governed, shall find that in order to meet the wants of legitimate commerce, it be requisite to extend their discounts and advances upon approved securities, so as to require issues of notes beyond the limits fixed by law, Her Majesty's Government recommend that this necessity should be met immediately upon its occurrence, and in that event they will not fail to make application to Parliament for its sanction.

No such discount or advance, however, should be granted at a rate of interest of less than ten per cent., and Her Majesty's Government reserve it to themselves to recommend if they should see fit the imposition of a higher rate. After deduction by the Bank of whatever it may consider to be a fair charge for its risk expense, and trouble, the profits of these advances will accrue to the public.

We have the honor to be, Gentlemen, your obedient servants,

(Signed) RUSSELL.
(Signed) W. E. GLADSTONE.

Downing Street, May 11th, 1866,

In 1825, there was a panic, attributed to speculation in foreign mining companies. The Bank of England then issued £1 notes, a denomination which had been forgotten, and which, by the way, cable messages hint may be issued again to take the place of sovereigns in these troublous times.

In 1836 there was a crisis which was one of the immediate cause of the restriction of country note issues by the Bank Act of 1844. Again in 1847 speculation in railway companies precipitated a crisis which necessitated the suspension of part of the Act of 1844. Ten years later a totally unexpected crisis took the mercantile world by surprise, and resulted in a second suspension of the Act.

Panic of Sixty-Six.

The next, and probably the worst panic, that of 1866, is usually associated with speculative company promotion following upon the passing of the Companies Acts in 1862, and was precipitated by fluctuations in the price of cotton due to the American Civil War. It was especially notable for the failure of Overend, Gurney and Company, the bill brokers, with liabilities of over ten million pounds. For the third and last time the Act of 1844 had to be suspended, and such was the gravity of the situation that the bank rate remained for three months at 10 per cent.

The last of the series of crises occurred in 1875, and is generally ascribed to the reaction following the abnormally high prices of 1872 and 1873, and to the great amount of accommodation bills in existence.

Several Other Crises.

The City of Glasgow Bank failure in 1878 caused some anxiety in London, but did not produce an actual crisis, and the suspension of Baring's, in 1890, might have easily caused a panic, but for the promptitude with which the Bank of England and the leading joint stock banks joined in guaranteeing the engagements of the defaulting firm.

Both in 1857 and 1866, the bank was required to maintain its rate of discount at 10 per cent., so long as it should use the government's permission given to it to issue notes in excess of the statutory limit. As this rate tended to drive away business from the bank as soon as the rate in the general market fell, this condition insured as rapid a return to the legal limit of the issue as was practicable.

EUROPEAN BANK RATES AND WAR

The following are the bank rates prevailing in Europe, so far as can be gathered from crippled cable lines:—

Bank of	Per cent.
England	6
Germany	6
France	6
Holland	6
Austria	8
Belgium	7
Sweden	5½
Italy	5
Russia	6
Switzerland	5½
Denmark	
Norway	6½
Spain	4½
Portugal	5½

These are all very high rates. The Bank of England has had a 10 per cent. rate only twice since 1844. The highest rates on record of some of these banks are as follows:—

		During the year.	
Bank.	Year.	Lowest rate %.	Highest rate %.
France	1863	3½	7
France	1864	4½	8
Germany	1866	4	9
Netherlands	1858	3	7
Belgium	1870	2½	6
Belgium	1873	3½	7

The Bank of England and Bank of France rates were reduced respectively from 10 to 6 and from 8 to 6 on August 6th.

War, Finance and Commerce

Cable Messages Censored

All cable messages are subject to the censor's pencil

Ships to Stay in Port

All British trading vessels have been ordered to remain in port.

Still Paying Specie

British government has not yet decided to suspend specie payments.

Britain Votes Another Half Billion

British government has voted an additional $500,000,000 for war purposes.

War Stores are Held

The British Government has prohibited the export of war stores of any character.

Bank in Egypt Closes

The local branch of the Banco di Roma in Alexandria suspended business on Tuesday.

Trade Commission Cancels Meetings

The Dominion Royal Commission will cancel its engagements in Canada until after the war.

Martial Law on St. Lawrence

Montreal harbor, the St. Lawrence River and the canals leading thereto are under martial law.

Hiding the Securities

A special train carrying all the securities of the National Bank of Belgium left for Antwerp.

United States Gold for Notes

Gold is being sent in United States battleships to Europe to relieve United States citizens there who have only travellers' notes of credit.

Opening of Stock Exchanges

The reopening of the stock exchanges depends entirely on events, but the probability is they will be closed for some time.

Heavy Gold Exports

The exports of gold from the United States during the present movement, which began on July 24th, up to August 1st, totalled $44,950,000.

No Bank Drafts

No bank drafts will be issued at present to any part of the Continent of Europe, according to information obtained from the Montreal banks.

Twenty-five Millions for Ships

British government will pay about $25,000,000 for the two Turkish battleships being constructed in English yards, and which it has taken over.

Closed at Montevideo

A decree was issued at Montevideo on Monday closing the Bourse and banks until August 8th, and extending the time for the payment of maturing notes.

German War Loan

A bill was introduced into the German Imperial Parliament on Tuesday providing for the appropriation of $1,250,000,000 to meet the expenses of the war.

Embargo on Cash

An embargo has been laid on Russian balances at the great banks in Germany. The funds are considered by Germany as property belonging to a hostile force.

Closed Down in Argentine

A Buenos Ayres dispatch says the Government has issued a decree suspending the operations of banks and the obligations of commerce in Argentine until August 10th.

Million Shares Sold in Day

Sales on the New York stock exchange totaled 1,000,000 shares on Tuesday, July 28th, at losses ranging from one to 19 points, with pressure greatest on Canadian Pacific.

Canadian Liner Held

The Canadian Pacific Railway Company's liner "Empress of Asia" at Hong Kong, has been requisitioned by the British Government and other boats are being held.

Britain's Big War Loan

The British house of commons voted on Tuesday $525,000,000 for emergency purposes and several other bills were passed in five minutes without a dissentient voice.

This Gold is German Prize

The exact value of the gold on the North German Lloyd liner. "Kronprinzessin Cecelie," with the firms shipping it, according to the liner's manifest, is as follows: For Paris: Goldman, Sachs and Company, $1,076,634.49; Heidler, Bach, Ickelheimer and Company, $1,584,000; National City Bank, $2,104,254.34. For London: Guaranty Trust Company, $4,942,937.64; National City Bank, $1,061,718.89. Total, $10,769,545.36.

Canada Buys War Vessels

Canada has bought two submarines which have been built at Seattle for the government of Chili. Parliament will be asked shortly to pass a vote for their purchase.

Limit Savings Withdrawals

The French Government has issued a decree limiting withdrawals from savings banks to 50 francs ($10) for each depositor. Withdrawals can be effected only on two weeks' notice.

British Government has Railroads

The British Government has taken over all the railroads in the United Kingdom. The government will probably manage the roads through a committee to be formed from the railway managers.

New French Notes

The Bank of France has decided to place in circulation 20-franc and 5-franc notes for the purpose of relieving the difficulties of commerce arising through the disappearance of gold and silver.

Prices of Food Raised

The wholesale prices of foodstuffs have advanced. Prices of every commodity probably will follow suit. The decision to advance prices was taken by the wholesale grocers after informal discussions on the matter.

Treasury Bills for War

The British Government has incurred a large extra expenditure in the mobilization. Its cash balances were first drawn upon, then temporarily borrowing from the Bank of England or by issue of Treasury bills was resorted to.

Laying in Food Supplies

A full year's supply of food, which will cost $20,000, has been purchased by Mr. E. G. McConkey, Toronto, with the object of providing against a probable shortage in victuals. Many private citizens are getting in a small stock of flour, sugar, tea, oatmeal, etc.

Emergency Circulation in England

Lloyd George announced on Wednesday that the government on Friday would revive the one pound notes and will also issue a new ten shilling note. This move is taken to relieve the financial pressure caused by the retirement of gold from circulation. The emergency currency will be issued in a quantity sufficient to meet all needs.

Demands on German Banks

Despite heavy demands made upon them all German banks continued to make full payments, says a German dispatch. Settlements on the stock exchanges were completed on Tuesday, and it was found that the total failures amounted to but $500,000. (This dispatch may have censored a few cyphers.)

Canada's Financial Position

"Canada's financial position is now impregnable," said Mr. D. R. Wilkie, president of the Imperial Bank of Canada, discussing the action of the Dominion Government in making notes legal tender, in increasing the limit of circulation, and promising to do everything to meet the exigencies of the present or future situation.

Brazil Loan is Dead

The financial situation in Brazil, which was already a serious one, has been considerably aggravated by events in Europe. The Brazilian loan, which was being negotiated in Europe, has now been made impossible, and it is said that the Government intends to issue treasury bills to the amount of $50,000 maximum in order to meet urgent requirements.

New York Call Loans

Leading bankers in New York deny that loans are being called. They pointed out that with the Stock Exchange closed banks could not call in the loans by reason of the fact that there was no market in which the securities held as collateral could be disposed of. If the stocks were to be sold at auction, it was said, the banks would have to give the owners six days' notice.

Stock Values Decline

The aggregate shrinkage of thirty-eight stocks on the Canadian Exchanges since December, 1912, amounts to $301,500,000 according to a compilation of the Montreal Financial Times. The total market value of these thirty-eight securities in 1912 was $823,000,000, compared with a present market value of $521,500,000. The decline, therefore,, amounts to over 37 per cent. in a period of eighteen months.

Declared a Moratorium

The King of England issued a proclamation on August 2nd declaring a moratorium for a month. By this means cash settlements may be deferred. France has also established such a moratorium, to run till the end of August, and Sweden has followed. These precautions will be of great assistance in speedy restoration of financial equilibrium, even if general war should be averted. If war is declared they will be of paramount usefulness in restricting the area of trouble.

Bank Reassured Depositors

In the hope of reassuring depositors the Bank of England remained open on Saturday, August 1st, for a long time after its regular closing hour, making all payments that were demanded.

The British Treasury announced on August 1st that the situation then did not justify any emergency action looking to suspension of the Bank Act of 1844. The Treasury was prepared to take such action if further developments seemed to make it necessary, but there was a strong feeling against unsecured paper currency and everything was to be done to avoid it.

To Help Finance Minister

If the necessities of business in Canada require the government to issue Dominion notes to the banks on the deposit of approved securities by the banks, the Minister of Finance has appointed the following gentlemen to advise him as to the securities to be accepted: Mr. D. R. Wilkie, president Canadian Bankers' Association, Toronto; Sir Frederick Williams Taylor, general manager of Bank of Montreal, Montreal; Mr. E. L. Pease, general manager of Royal Bank of Canada, Montreal; and Mr. H. B. Walker, manager of Canadian Bank of Commerce, Montreal.

Was C.P.R. Made the Stock Market Fuse?

THERE were reports current in the city of London, England, this week to the effect that the heavy selling orders from Germany during the past week or two were really a deliberate attempt to smash the London market and cause a scare in the financial and commercial world so as to keep Great Britain out of the war. These reports also mentioned the sum of $10,000,000 as having been expended, or arrangements made for its expenditure, for this object, with the cognizance of the German government.

This story has substantial signs of truth. The Canadian Pacific Railway, as one of the greatest corporations in the British Empire, would suffer in various ways in time of warfare, according to the seriousness and extent of the war. The least effect would be a decrease in earnings. The greatest effects can be imagined from the fact that the Canadian Pacific Railway is in the railroad business throughout Canada, the hotel business, the farm land business, and most important of all the shipping business in the two great oceans. *The Monetary Times*, with the information it has received from time to time, has good reason to supplement the London reports, mentioned above. Not only during the past few weeks have arisen in Germany selling orders of Canadian Pacific stock. The selling movement in Berlin has spread back many months. According to information gathered by *The Monetary Times*, German holdings some time ago were increased to a considerable extent, the approximate figure being 45 per cent. of the common stock of the railroad.

This would constitute excellent stock market ammunition for unloading. German selling later is understood to have brought the German holdings down to 5 per cent., an extraordinary drop. German bankers were said to have been advised by their Canadian agents to sell, but it seems apparent that they needed no such advice. In any event, Germany was a consistent seller. The Canadian Pacific stock, representing one of the best managed corporations in the world to-day, was probably chosen as the best security to use as stock exchange gunpowder,—for we have seen in the present struggle what extensive inter-relative effects have belligerence and finance.

The supposed German plan worked with a measure of success. C.P.R. was the spectacular stock in the recent declines and suffered most, dropping no less than 20 points in one day on the New York exchange. But in this campaign of the stock market, probably it had not been reckoned by the enemy that there was any possibility of the world's stock exchanges being closed. Naturally, it would have been fatal for the Berlin Bourse alone to remain open.

Most significant of all is the Austrian government's extraordinary harassing of the Canadian Pacific Railway's activities in Austria when it was running observation cars and engaging in the transportation of emigrants. Those events are but a few months old and again tend to show that apparently a deep-laid plot was originated in Berlin to undermine the British financial fabric, Canadian Pacific stock being used as the fuse. Meantime, the German war chest was well filled with gold.

◆

The British Government has decided to reinsure English shipping. The risk will be 80 per cent. on hulls and a flat rate on cargoes.

"STRONG AS THE BANK OF ENGLAND"

Character of Its Strength—Its Distinctive Functions Described

BY HARTLEY WITHERS.

The distinctive functions of the Bank of England consist in its acting as—

1. Banker to the British Government.
2. Banker to the joint stock and private banks.
3. (a) Sole possessor of the right to issue notes which are legal tender in England; (b) sole possessor, among joint stock banks with an office in London, of the right to issue notes at all.
4. Provider of emergency currency.
5. Keeper of the gold reserve for British banking.
6. Keeper of the gold reserve which is most readily available for the purposes of international banking.

Bank Works With Ease.

These various functions fit into and supplement one another, and though their diversity is sometimes pointed to as throwing too much responsibility onto one institution, it in fact enables the bank to carry out its duties with extraordinary ease, and with the least possible disturbance to the financial community. By the fact that it keeps the balances of the other banks, the Bank of England is enabled to conduct the payment of the interest on the British debt largely by transfers in its books. By the fact that it keeps the balances of the government and has the monopoly of the legal-tender note issue, the bank has a great prestige in the eyes of the general public, which it communicates to the other banks which bank with it. There is an impression that the government is always behind the bank, and that the bank is always behind the other banks, and this feeling has certainly done much to foster the confidence of the British public in its banking system.

A credit in the books of the Bank of England has come to be regarded as just as good as so much gold; and the other banks, with one exception, habitually state their "cash in hand and at the Bank of England" as one item in their balance sheets, as if there were no difference between an actual holding of gold or legal tender, and a balance at the Bank of England. It thus follows at times when an increase of currency is desirable, it can be expanded by an increase in the balances of the other banks at the Bank of England, since they thus become possessed of more cash to be used as the basis of credit.

Currency in England.

For currency in England chiefly consists of checks, and customers who apply to the banks for accommodation, by way of discount or advance, use it by drawing a check which is passed on and so creates a deposit; and expansion of currency thus consists chiefly in expansion of banking deposits. This expansion is only limited by the proportion between deposits and cash which the banks think fit to keep, and as long as they can increase their cash by increasing their credit in the Bank of England's books the creation of currency can proceed without let or hindrance.

Their balances can be increased by borrowing from the Bank of England, which is generally carried out not by the banks themselves but by their customers from whom they have called in loans, and the Bank of England is thus enabled to provide emergency currency with great ease, by means of loans and discounts which are used to swell the balances of the other banks, which thus show an increase of the cash at the Bank of England which they use as a basis for credit operations. The elasticity of the system is thus remarkable, and the merchants and bill brokers of London can by taking approved security to the Bank of England, increase the basis of English credit in a few minutes by borrowing.

Bank as Government Banker.

The bank's position as government banker is of little direct material advantage. Its duties as such, besides the normal relation between a bank and a customer, consists chiefly in making advances to the treasury in the shape of "deficiency advances" when the government balances are too low to admit of the payment of the quarterly interest on the British debt without replenishment, or against "ways and means" advances at times when the revenue is coming in more slowly than government expenditure is proceeding. It also, when the government has to borrow to a greater extent, manages its issues of treasury bills, or any loan operation that the government may have to undertake, such as the creation of fresh debt in time of war.

By discounting and making advances the Bank of England can at any time create book credits, which are regarded as cash by the English banking community, and on which the latter can base the credits which give the right to draw checks, which are the most important part of the English currency. The extent to which the Bank of England can create this credit is a matter for its own discretion, but any creation of it diminishes the proportion that it shows in its own weekly returns between its reserve and liabilities. Consequently when it is applied to for amounts which bring that proportion too low the Bank of England has to take steps to reinforce its cash reserve.

History of the Bank.

[The Bank of England came into existence in 1694. The act of that year provided for a loan to the government of £1,200,000 bearing interest at 8 per cent., and incorporated the subscribers, with this amount of nominal capital, as the Governor and Company of the Bank of England,—a title which has never been changed. Three years later the charter was revised. It was then provided that during the continuance of the charter, no other bank or corporation in the nature of a bank should be allowed in the kingdom. This monopoly was confined by the acts of 1707 and 1742. The government of 1844, under Sir Robert Peel, revised the organization of the bank. The legislation was known as the "Bank Charter Act of 1844," or "Peel's Act," in which are embodied the leading provisions by which the bank note circulation of England and Wales is now regulated. The act provided for the division of the bank into two departments, the Issue Department and the Banking Department. The former was charged exclusively with the issue and redemption of notes; the latter was charged with the other functions of banking, including the ordinary business of discount and deposit.—Editor, *The Monetary Times*].

◆

WHAT IS CONTRABAND OF WAR?

Things Which May Be Seized—Position of Gold Shipments

There is an international list of articles which, by general agreement among the treaty nations, can never be considered as contraband. Gold is a contraband of war, conditionally only. It becomes contraband absolutely if it is shipped to a nation involved in war, and is liable to seizure by ships of the enemy of that country.

Absolute contraband of war, which is always liable to seizure, consists of all war material: guns, ammunition, military vehicles of all sorts. Other articles, except those on the non-contraband list, may be treated as contraband by a belligerent after giving notice to neutral nations of the articles it has classed as liable to seizure.

As To Conditional Contraband.

Conditional contraband is not liable to capture except when found on board a vessel bound for territory belonging to or occupied by an enemy or for the armed forces of the enemy, and when it is not to be discharged at an intervening neutral port. The ship's papers are conclusive proof both as to the voyage in which the vessel is engaged and as to the port of discharge of the goods, unless she is found clearly out of the course indicated by her papers and unable to give adequate reasons to justify such deviation.

These May Be Seized.

"The following articles, susceptible of use in war as well as for purposes of peace, may without notice be treated as contraband of war, under the name of conditional contraband.

1. Foodstuffs. 2. Forage and grain suitable for feeding animals. 3. Clothing, fabrics for clothing, and boots and shoes suitable for use in war. 4. Gold and silver in coin or bullion; paper money. 5. Vehicles of all kinds available for use in war and their component parts. 6. Vessels, craft, and boats of all kinds; floating docks, parts of docks, and their component parts. 7. Railway material, both fixed and rolling stock and material for telegraphs, wireless telegraphs and telephones.

8. Balloons and flying machines and their component parts, together with accessories and articles recognizable as intended for use in connection with balloons and flying machines. 9. Fuel; lubricants. 10. Powder and explosives not specially prepared for use in war. 11. Barbed wire and implements for fixing and cutting same. 12. Horseshoes and shoeing materials. 13. Harness and saddling. 14. Field glasses, telescopes, chronometers and all kinds of nautical instruments.

A neutral vessel is liable to capture when more than one-half of its cargo is contraband. The war vessel making the seizure may measure her contraband by value, volume, weight, or the freight rate, and if it can bring the contraband up to more than one-half of the cargo by way of the four methods it may make a prize of the ship.

These Are Excepted.

The following are the articles which can never be classed as contraband:—

1. Raw cotton, wool, silk, jute, flax, hemp and other raw materials of the textile industries and yards of the same. 2. Oil seeds and nuts; copra. 3. Rubber, resins, gums and lacs; hops. 4. Raw hides and horns; bones and ivory. 5. Natural and artificial manures, including nitrates and phosphates for agricultural purposes. 6. Metallic ores. 7. Earths, slags, lime, chalk, stone, including marble, bricks, slates and tiles.

8. Chinaware and glass. 9. Paper and paper-making materials. 10. Soap, paint and colors, including articles exclusively used in their preparation and varnish. 11. Bleaching powder, soda, ashes, caustic soda, salt cake, ammonia, and sulphate of copper. 12. Precious and semi-precious stones, pearls, mother of pearl and coral.

13. Clocks and watches. 14. Fashions and fancy goods. 15. Feathers of all kinds, hairs and bristles. 16. Articles of household furniture and decoration; office furniture and requisites.

All non-contraband articles may be seized by a belligerent if they are conveyed in a ship flying an enemy's flag, or if more than half of the remainder of the cargo is contraband.

Insurance of Gold.

Shipments of gold, during times of war, are heavily insured. Rates on Tuesday, last week, advanced to about $600 per $1,000,000, and it was the belief of underwriters that the rate may go up to $1,250 per $1,000,000 before long. Marine underwriters are not likely to take more than $10,000,000 on any one ship, and same may decline to take more than $7,500,000. The insurance risk is usually carried by the consignee banker, but in the event of loss, by capture, the whole burden will fall upon the underwriters of the insurance. In the case of large shipments of gold, reinsuring is the practice, as is done with other large and valuable shipments. Some insurance policies, where gold shipments are concerned, do not mention war as one of the eventualities against which the shipment is protected, and shipments under such a policy would not become the loss of an insurance company if the gold is seized as a prize of war.

◆

WAR RISK ON GRAIN SHIPMENTS GUARANTEED

The British government has decided to guarantee war risks on wheat and flour shipped from Canada or the United States to the United Kingdom under existing contracts, the premiums to be paid by the importer and to be charged by him against the eventual receiver. This step is being taken partly to secure 8,000,000 quarters of Canadian wheat and large shipments of American grain.

"If the British government takes such a position for any length of time it will help the situation very much," said Mr. John Aird, assistant general manager of the Canadian Bank of Commerce, commenting on the matter. "It will help to facilitate cash sales. If it applies only to existing contracts it will be of importance, for it will prevent those engaged in the trade from running the risk of ruinous losses if they carry out their contracts.

"Dealers now will be anxious to get rid of their grain, for they will not know how soon Britain's requirements for the war will be filled up. If the war risk continued to be guaranteed loans would be made on grain consigned to Old Country importers when they had established credits on this side."

BANK AS GOLD KEEPER

How the Bank of England Acts as Custodian of Gold for International Banking

(United States Monetary Commission's Report).

Very important is the Bank of England's duty as custodian of the gold and store for international banking. London is the only European centre which is always prepared to honor its drafts in gold immediately and to any extent. The Bank of France has the right to make payments in silver, and uses it by often charging a premium on gold, sufficient to check any demand for it; and in other centres measures are taken which make apparently free convertibility of credit instruments optional at the choice of the central bank. Consequently the Bank of England has to be prepared to meet demands on it at any time from abroad, based on credits given to foreigners by the English banking community, and it has thus to observe the signs of financial weather in all parts of the world and to regulate the price of money in London so that the exchanges may not be allowed to become or remain adverse to a dangerous point.

The difficulties of this task are increased by the extent to which the English banking community works independently of it, by accepting and discounting finance paper, and giving foreigners credits at rates which encourage their further creation. For the low and wholly unregulated proportion of cash to liabilities on which English banking works, enables the other banks to multiply credits ultimately based on the Bank of England's reserve, leaving the responsibility for maintaining the reserve to the bank. This it does by raising its rate when necessary, and so, if it has control of the market and its rate is "effective"—a phrase which will be explained later—raising the general level of money rates in London.

When Rate is Ineffective.

When its rate is not effective, the Bank of England finds itself obliged to intervene in the outer money market—consisting of the other banks and their customers—and control the rates current in it. This it does by borrowing some of the floating funds in this market, so lessening their supply and forcing up the price of money. By means of this borrowing it diminishes the balances kept with it by the other banks, either directly or indirectly—directly if it borrows from them, indirectly if it borrows from their customers who hand the advance to it in the shape of a check on them. The result is that so much of the "cash at the Bank of England," which the English banking community uses as part of its basis of credit, is wiped out, money—which in London generally means the price at which the bankers are prepared to lend for a day or for a short period to the discount houses—becomes dearer, the market rate of discount consequently tends to advance, the foreign exchanges move in favor of London, and the tide of gold sets in the direction of the Bank of England's vaults, and it is enabled to replenish its reserves or check the drain on it.

That the Bank of England should have to go through this clumsy ceremony of borrowing money that it does not want, in order to deprive the outer market of a surplus which depresses discount rates in a manner that is dangerous owing to its effect on the foreign exchanges, arises from the want of connection between bank rate and market rate. In former days the London money market never had enough money to work with without help from the Bank of England. Bagehot, in his great work on Lombard Street, published in 1873, says that "at all ordinary moments there is not money enough in Lombard Street to discount all the bills in Lombard Street without taking some money from the Bank of England."

It Influences Market Rate.

As long as this was so, bank rate—the price at which the bank would discount bills—was at all times an important influence on the market rate. Since then, however, the business of credit making has been so quickly and skillfully extended that Lombard Street is frequently able to ignore bank rate, knowing that it will easily be able to supply its needs from the other banks, at rates which are normally below it. Currency in England consists of checks drawn against deposits which are largely created by the loans and discounts of the other banks. There is no legal limit whatever on the extent to which these loans and discounts can be multiplied, and the only limits imposed are those of publicity, which is applied rarely in all cases and in some not at all, and of the prudence with which the banks conduct their business.

Hence it follows that competition between the banks often impels them to continue to make advances or discount bills at low rates when the Bank of England, as custodian of the English gold reserve, thinks it advisable in the interests of the foreign exchanges to impose a higher level. This it does by borrowing some of the credit manufactured by the other banks, in order to create artificial scarcity of money, and make its own official rate effective.

When Rate Operates.

It thus appears that the Bank of England's official rate is often through long periods a mere empty symbol, bearing no actual relation to the real price of money in London; and only becomes effective, and a factor in the monetary position (1) when the trade demand for credit is keen enough to tax the credit-making facilities of the other banks to their full extent, (2) when the payment of taxes transfers large sums from the other banks to the government's account at the Bank of England, so reducing the "cash at the bank" on which they build credit operations, and (3) when, owing to foreign demands for gold, the Bank of England takes measures, by borrowing, to restrict credits in the open market and to make its rate effective. In other respects its official rate differs materially from the rates quoted by ordinary dealers in credit.

◆

WAR RAISES MARINE INSURANCE RATES

Large Advances Made Everywhere—Underwriters' Fears Expressed in Figures

Lloyds, the great marine insurance association, is experiencing strenuous times. A glimpse of the extraordinary activity there is given in a dispatch from London dated July 31. "Enormous quantities of freight were insured at constantly rising rates," it says, "and astounding premiums were made to insure the specie which is coming from America.

"The German steamship Blucher, with a considerable volume of specie from the Plate, will be nearing Europe in a few days. Its gold was insured originally at 1 shilling and 3 pence per cent. On Monday the rate rose to 2 shillings and 6 pence; on Tuesday to 5 shillings, and yesterday to 60 shillings. The quantity of specie from the Plate, worth $2,500,000, would normally cost $1,560 insurance. At current rates it would cost $75,000.

"From New York to London the normal rate on specie is 1 shilling per cent. To-day on the St. Louis, which is bringing a large quantity of gold to Europe, 20 shillings per cent. is paid, a hitherto unheard of rate. For specie in the insurance market from London to Rotterdam, 5 shillings per cent. was paid to cover war risks only on shipments, sailing at the beginning of next week, (August 3rd and later), a fact that indicates clearly where the underwriters' fears lie."

At Montreal on the same day, there was a sudden increase in marine insurance rates, with a demand for insurance against war risks. At noon, this extra insurance amounted to $25 a load of 8,000 bushels of wheat, or about one-quarter of a cent a bushel, which would mean an extra $625 for an ordinary ship load of 250,000 bushels.

This was a merely nominal rate early in the day, and it fluctuated a good deal, generally upwards with every item of war news. Later in the day such firms as Messrs. Dale and Company stated that just what the rate for war risks was they could not tell, since it was varying so much with changing reports that there was not any certainty regarding it.

A general war means almost prohibitive rates.

◆

"No loans have been called as far as I know," says Mr. D. R. Wilkie, president of the Canadian Bankers Association, "and the arrangements whereby banks gave brokers to understand that loans would not be called or additional margins demanded is still in effect. The condition attached to this arrangement, however, must be complied with, namely, that the brokers in turn will not demand extra payments from their clients. As soon as the brokers take advantage of the banks' decision and press their clients, the banks will immediately press the brokers."

DIARY OF THE GREAT EUROPEAN WAR

June 28—Austrian Crown Prince and Princess shot dead on Austrian territory by a Servian.

July 24—Austria serves a twenty-four hour ultimatum on Servia.
German Foreign Office announces, "Should another power intervene, Germany will promptly fulfil its duty as an ally."

July 25—Russia begins mobilization.
Servia gives a partial answer to Austria and asks for more time. Austria refuses, saying Servian answer is unsatisfactory.

July 26—Britain suggests a conference of mediation.

July 28—Germany rejects mediation conference proposal.
Austria declares war on Servia.

July 29—Germany notifies Russia to stop mobilization.

July 30—Germany gives France and Russia 24 hours to explain mobilization.

July 31—Germany proclaims martial law.
Russia announces mobilization of land and sea forces.

Aug. 1—Germany and Russia break negotiations.
Italy announces neutrality.
Germany serves ultimatum on France.

Aug. 2—Germany declares war on Russia and her troops invade territory of France, Belgium, Switzerland and Russia.

Aug. 3—Kaiser demands that Belgium allow his armies to cross Belgium but promises to preserve Belgium's independence.
Belgium appeals to Britain to protect her.
Britain obligates herself to defend the shipping and coasts of France against German fleet.

Aug. 4—Germany declares war on Belgium.
Japan announces that it will support Britain if war extends to Far East.
Germany admits "state of war" exists between herself and France.
Great Britain twice asks Germany if she will respect neutrality of Belgium.
Germany fails to give satisfactory answer.
Germany declares war on England.

JULY FIRE LOSSES

Over Two Million Dollars—Death From Using Coal Oil

The Monetary Times' estimate of Canada's fire loss during July amounted to $2,033,139, compared with June loss of $1,267,416 and $2,579,698 for the corresponding period of last year. The following is the estimate for the July losses:—

Fires exceeding $10,000	$1,496,400
Small fires	297,635
Estimates for unreported fires	239,104
	$2,023,139

The following are the monthly totals of the losses by fire for 1914, compared with the three previous years' losses:—

	1911.	1912.	1913.	1914.
January	$2,250,550	$3,002,650	$3,913,385	$2,796,312
February	941,045	1,640,153	2,037,386	2,920,749
March	852,380	2,261,414	1,710,756	2,139,552
April	1,317,900	1,355,055	1,470,622	1,916,238
May	2,564,500	2,251,815	2,123,868	1,539,502
June	1,151,150	4,229,412	3,069,446	1,267,416
July	5,384,300	1,741,371	2,579,698	2,033,139
August	920,000	1,164,760	3,034,775	......
September	1,123,550	883,949	1,468,324	......
October	580,750	1,416,218	1,383,572	......
November	1,506,500	1,184,010	2,200,486	......
December	2,866,950	1,769,905	1,354,300	......
Totals	$21,459,575	$22,900,712	$26,346,618	$14,612,908

The fires at which the loss was estimated at $10,000 and over were as follows:—

Langham, Sask., July 2	Flour mill	$ 35,000
Ford, Ont., July 3	Hotel	15,000
Vancouver, B.C., July 3	Factory	15,000
Manville, Alta., July 3	Business section	28,000
Dalhousie, N.B., July 7	Lumber mill	25,000
Sperling, B.C., July 8	Lumber mill	40,000
Port Dover, Ont., July 11	Brick works	20,000
Montreal, Que., July 11	Grandstand	10,000
Preston, Ont., July 12	Barns	30,000
Fredericton, N.B., July 14	Business blocks	15,000
Hearst, Ont., July 16	Town	100,000
Val Brilliant, Que., July 17	Residences, etc.	100,000
Kingston, Ont., July 19	Lumber piles	12,000
Hull, Que., July 19	Cement plant	25,000
Marmora, Ont., July 20	Cooperage plant	10,000
St. Lambert, Que., July 20	Barns	15,000
Toronto, Ont., July 20	Factory	15,000
Cap Magdeleine, Que., July 21	Pulpwood	500,000
Brockville, Ont., July 21	Residence	100,000
Prince Albert, Sask., July 21	Business block	100,000
Ottawa, Ont., July 21	Factory, etc.	47,500
North Bay, Ont., July 22	Garage, etc.	10,000
Brandon, Man., July 22	Barns	50,000
Montreal, Que., July 23	Grandstand	22,000
Winnipeg, Man., July 24	Factory	40,000
Bancroft, Ont., July 26	Business section	70,000
Moose Jaw, Sask., July 27	Barns	10,900
New Dundee, Ont., July 29	Business block	25,000
St. Celestin, Que., July 29	Residences	11,000

The structures damaged and destroyed included 40 residences, 26 barns, 9 factories, 14 stores, 4 lumber mills, 4 business blocks, 3 business sections, 3 poolrooms, 4 automobiles, 3 warehouses, 2 churches, 2 grandstands, 2 hotels, 1 foundry, 1 brick works, 1 gasoline launch.

Of the presumed causes, 8 were lightning, 6 incendiary, 3 overheated stove, 3 defective chimney, 3 dropped cigars or cigarettes, 3 children and matches, 3 smoking, 3 spontaneous, 2 sparks, 2 candles, 2 lamps exploded and upset, 2 electrical defects, 1 ignition of gasoline, 1 defective moving picture machine, 1 hot gas iron.

During July eight persons lost their lives through fire.

The following table compiled by *The Monetary Times* shows deaths caused by fire during the last six years:—

	1909.	1910.	1911.	1912.	1913.	1914.
January	16	27	27	27	14	26
February	8	15	12	11	21	18
March	16	20	18	24	22	27
April	18	37	20	15	11	22
May	21	15	28	18	33	8
June	16	52	13	6	18	12
July	4	15	110	9	9	8
August	17	11	22	16	29	..
September	10	10	13	6	27	..
October	26	16	17	21	15	..
November	34	19	20	22	24	..
December	33	19	17	28	13	..
Totals	219	256	317	203	236	221

The fires at which fatalities occurred were:—

Winnipeg, Man., July 24	Bonfire	1
Montreal, Que., July 2	Lit fire with coal oil	1
Port Arthur, Ont., July 5	Lit fire with coal oil	1
Montreal, Que., July 12	Lit fire with coal oil	1
Victoria, B.C., July 12	Burning building	2
Abernethy, Sask., July 17	Upset lamp	1
Toronto, Ont.	Set clothing alight	1

The annual statement of the Wabasso Cotton Company shows profits from trade account for the fiscal year ending June 30th last of $115,662, which compares with $123,374 in the previous year.

The Canadian Northern Railway has ordered $1,500,000 of equipment from the Canadian Car and Foundry Company, the Hamilton National Steel Car Company, the Crossen Car Company, and the Preston Car and Coach Company.

JULY MUNICIPAL BOND SALES

Amount to More Than $5,000,000—Figures for Canada, Britain and United States

The total municipal bond sales in Canada, according to the carefully compiled records of *The Monetary Times*, during July were $5,350,695, divided as follows:—

Canada	$2,154,260
Great Britain	3,116,435
United States	80,000
	$5,350,695

The Monetary Times' record for the first seven months of 1914, compared with the previous year, is as follows:—

Canadian Municipal Bond Sales in	For Year 1913.	Seven Months.
Canada	$20.550.239	$27.549.911
Great Britain	68,882,644	32,347,435
United States	20.168.053	3.943,000
	$109,600,936	$63,840.346

The municipal bond sales in Canada for July, as compiled by *The Monetary Times*, amounted to $2.144.260, compared with $4,299,294 for June and $1.591,924 for the corresponding period of last year.

The following table, compiled from the records of *The Monetary Times*, shows the sales in the Dominion during the first seven months of 1914, compared with the three previous years:—

	1911.	1912.	1913.	1914.
January	$ 420.337	$2,133.531	$1.337.500	$1.628.337
February	1.037,287	2.596.378	1.038.806	5.095.336
March	6,271,925	1,926.716	335,492	5,108,776
April	3,910,288	927,160	3.693.857	2,708.153
May	3,946,047	1.928,748	880,630	5.655.755
June	3.983.670	1,690.344	2.435.726	4.299.294
July	1,594.566	1.967,476	1.591.924	2.154.260
August	1,493,507	1.649.547	526.300	......
September	1,748,778	1,998.605	1,663.260	......
October	1.730,075	1,060.597	3.452.282	......
November	2,915.765	1.396.664	2.481.062	......
December	1,243.593	491.590	1.113.400	......
Total	$30,295,838	$19.767.256	$20,550,239	$27.549.911

The following are the particulars of the July sales in Canada by provinces:—

Ontario	$ 905.560
Quebec	50,000
Manitoba	244.200
Alberta	16,500
Saskatchewan	816,000
New Brunswick	122,000
	$2,154,260

The following are the details:—

Ontario

Oakville	$ 1,091	5	1922
Burk's Falls	8,000	..	....
Brantford	134.431	5	1934-54
Wallaceburg	36,000	..	1944
Waterloo Township	18,360	5½	1924
Englehart	28.000	..	....
Tilbury N. Township	2.400	5½	1924
Clarence Township	15,000	5	1934
Lochiel Township	5,038	6	1924-34
Barrie	52,190	..	....
Welland	82,000	..	....
Berlin	90,200	5	....
Pelee Township	9,350	6	1934
Strathroy	25.000	5	1944
Dunnville	9.500	5	1934
Oshawa	55.000	5	1934-44
Smith's Falls R.C.S.D.	35.000	5½	1944
Oxford County	36.000	..	....
Owen Sound	63,000	..	....
London	200.000	..	....
	$905.560		

New Brunswick

Moncton	$120,000	5	[illegible]
Fredericton	22.000	4	
	$122,000		

Manitoba

School Districts	$ 9,200	[illegible]	1924
Brant S.D.	9,000	6	1934
St. Vital	140,000	6	1934
Brandon S.D.	37.000	5	1943
St. Paul R.M.	18,000	6	1943
Dauphin	31,000	..	....
	$244,200		

Saskatchewan

School Districts	$109,000	7 & 7½	1924-34
School Districts	10,000	7½	1924
Chaplin	2,000	8	1924
Weyburn S.D.	25,000	5½	1944
Moose Jaw R.C.S.D.	170.000	6	1954
Saskatoon	500,000	..	....
	$816,000		

Quebec

St. Jerome	$ 50,000	5	1964

Alberta

Didsbury	$ 8,000	..	....
Pincher Creek	7,300	..	....
St. Jean de Baptiste S.D.	1,200	6½	1924
	$ 16,500		

The Monetary Times register of municipal bond sales in Great Britain during July shows £623,287 sold compared with June sales of £100,000, and with those of the corresponding period of last year, £1,200,000.

	1911.	1912.	1913.	1914.
Jan.	£ 500,000	£ 308,623	£1,475,000	£ 996.300
Feb.	1,107,200	1,509.300	750,000	824,900
March	204,100	......	......	1,575,000
April	794.700	1,189.726	1.438,300	......
May	1,314.700	101.300	2.327.900	1,850,000
June	......	721.100	1,913,470	500,000
July	851,139	500,000	1.200.000	100,000
August	......	......	96,900	23,287
Sept.	......	......	1.090,300	......
Oct.	......	......	564,300	......
Nov.	551,910	656.300	1,669.700	......
Dec.	......	385.700	1,400,000	......
	£5,323,749	£5,372.049	£13.926.470	£6.469.487

The municipal bond sales in Great Britain were:—

South Vancouver	£223,287
Greater Winnipeg Water Board	400,000

The municipal bond sales in the United States as compiled by *The Monetary Times* during the first seven months of this year amount to $3.943,000 as compared with $20,168,053 for the whole of 1913. The only sale reported for July was Port Moody, $80,000. The monthly totals are as follows:—

	1914.
January	......
February	$ 50,000
March	18,000
April	25.000
May	1.750.000
June	2,000,000
July	80,000
	$3,923.000

◆

Mr. A. W. Black, vice-president of the Ogilvie Milling Company, after a visit through Western Canada, expects there will be a decrease in the Western crop. Last year's crop ran 182,000.000 bushels, and Mr. Black put the figures for this year at from fifteen to twenty millions less, drought being responsible for the falling off. Mr. Black also declared that he was impressed with the amount of mixed farming that was being done, and forecasted a material increase in yield from this source.

LOAN AND TRUST COMPANIES' RECEIPTS

They Were Heavy Last Year—Comparison of Interest Rates Paid

The grand total receipts of the loan companies (with permanent and with terminating stock), of loaning land companies and trust companies, doing business in Ontario in 1913, were $370,908,467. Of these $176,290,467 were received as corporate, trustee representative, guardian or agent in trust, while $194,018,230 were received by the corporations for their own use. The largest item in the receipts is the amount received from borrowers and investments. This totals $89,437,559. The next largest receipts are the moneys received from depositors during the year. These aggregated $64,280,438. Debentures issued during the year totalled $12,145,597. The loan companies having only permanent stock took by far the greatest proportion of deposits—namely, $58,339,065 out of $64,280,438. The deposits of trust companies increased considerably in 1913, having changed from $322,490 in 1912 to $4,141,398 last year. Bank advances of all the four classes of companies last year amounted to $4,772,945, while other borrowed money totalled $10,062,667. All these amounts were received by the corporations for their own use.

Trust companies in their trustee and similar capacities, received from borrowers during the year a sum of $61,301,303. Their real estate rents totalled $1,065,670 and their real estate sales, $2,239,255. Money received for investment amounted to $95,393,733.

Loaned on Mortgages.

In 1913, the four classes of companies under review loaned on mortgages $25,815,355 and on other securities, $59,410,488. These figures compare somewhat strikingly with those of 1912, when the mortgage loans were $29,951,391 and loans on other securities, $19,767,001. The companies repaid their banks $2,894,643 and repaid other borrowed money amounting to $10,780,095. The cost of management of all the companies was comparatively small, being $3,692,172. The expenses on corporation account aggregated $194,618,236 and on trust and agency account $176,290,230, a grand total expenditure of $370,908,467. Details of these receipts and expenditures appear in the accompanying table.

A total of $12,517,091 of debentures of all these classes of companies mature during 1913-1914, but the greater portion of these are the debentures of loan companies having only permanent stock, the amount credited to them being $11,564,342 Loan companies having terminating stock as well as permanent stock, or having terminating stock only, have $664,807 debentures maturing in those years, while the loaning land companies have $287,041.

Interest Rates Paid.

It is interesting to examine the records of interest paid on the companies' deposits and various securities. Averaging the interest paid by the four classes of companies under review, we get the following result:—

Interest paid on	Rate per cent. 1913.	Rate per cent. 1912.
Deposits	3.750	3.7385
Debentures	4.599	4.4350
Debenture stock	4.0	4 0

The permanent stock loan companies paid in 1913, 3.5050 per cent. on deposits, 4.474 per cent. on debentures and 4.0 per cent. on debenture stock, compared with 4.0 per cent. on deposits and 5.083 per cent. on debentures paid by terminating stock loan companies. On the same accounts, the loaning land companies paid 3.5 per cent. on deposits and 4.24 per cent. on debentures. The trust companies paid 3.995 per cent. on deposits.

Interest on Mortgages.

The average rate of interest received on realty mortgages and other securities owned beneficially, may be summarized as follows:—

	Rate per cent. on Mortgages of realty	Other securities.
Loan companies (permanent stock)	6.805	5.632
Loan companies (terminating stock)	7.20	7.44
Loaning land companies	6.20	6 0
Trust companies	6.040	5.750

The average rate of interest received by the trust companies on realty mortgages, not owned beneficially, was 6.674 per cent. and on other securities not owned beneficially, 5.848 per cent. The number and amount of mortgages enforced by the two classes of loan companies and by the trust companies may be tabulated as follows:—

	Owned beneficially. No.	Owned beneficially. Amount.	Not so owned. No.	Not so owned. Amount.
Loan companies (permanent stock)	387	$544,386	..	....
Loan companies (terminating stock)	2	677	..	....
Trust companies	43	85,623	193	$281,817

These are the figures for 1913. In 1912, the terminating stock loan companies enforced 22 mortgages on property owned beneficially, with a value of $29,482.

The four classes of companies in 1913 wrote off or transferred to real estate, owned beneficially, $221,206 and $15,522 not so owned.

LOANS AND REAL ESTATE

Borrowers Required to Make Reduction in Mortgage Loans—Report of Investment Corporation of Canada

In these times when over-capitalized industrial companies are in trouble, it is worth while taking note of the success of the conservatively-managed financial companies. Shareholders of the Investment Corporation of Canada are well pleased at the success of the company during the past three years. Profits have been sufficient to wipe off all organization expenses, discounts on sales of securities, depreciation, and yet show 15 per cent. earned upon the common stock of the company during the year just closed. This company's Canadian associates are one of the most reliable and conservative firms, Messrs. Oldfield, Kirby and Gardner, of Winnipeg. The address of the chairman of the Investment Corporation of Canada, Mr. C. E. Hambro, at the annual meeting held in London the other day, contained some points of much interest:—"The scarcity of loanable funds owing to the stringency of money all over the world, which was felt very acutely in Canada during the last 12 months," said Mr. Hambro, "has enabled our people to select some exceptionally good mortgage loans, and they inform us that the business done in this connection during this period has been of an exceptionally high character.

Reducing Mortgage Loans.

"The policy of requiring borrowers to make a reduction in their mortgage loans has been followed through the year, but, while this is done as far as possible, it must be recognized that in very tight-money conditions in the case of land farmers who are dependent on grain crops to meet their obligations it is not possible for each individual borrower to come up to his undertakings always, and proper consideration has necessarily to be shown to these customers, who through adverse weather conditions or through other causes have suffered loss or injury to their crop. It is most satisfactory, considering the year, to be able to state that over 90 per cent. of the interest maturing during the year has been paid promptly. As regards the remaining 10 per cent., some difficulties are being experienced which have not been encountered during recent years. The money scarcity brought to an end a period of several years marked by unwise speculation and great extravagance, which involved some of the borrowers—more particularly those who were operating on a larger scale—in difficulties to meet their interest.

"Some of those men found themselves unable to make a sale of their speculative holdings and have no credit at their bank, and it may be necessary to realize on their security by sale. Proceedings to this end are now under way. Our managers say that it is not, of course, anticipated that all these properties will have to be sold. Settlements, they fully expect, will be made, and we understand that at the present moment some have already been made without any sale; but they say that, even if the properties should come under the hammer, there is no reason to apprehend any loss on the realization. However, the total amount is such a small one that we can look upon it with equanimity.

As to Real Estate.

"As regards real estate, there has been practically no change in this item during the year. As you will understand, this year has been an inopportune one to sell real estate at a profit. You will see that during the year the corporation's liabilities on their real estate purchases have been reduced from £40.684 to £20.065, and the amount to be received in respect of sales has been reduced from £93.105 to £57.851. All payments now due have been paid up. There was one of £600 odd overdue on April 30, but we have been advised that this has since been paid. The profits in suspense—that is, profits that will come in over a series of years accruing from property previously sold have been reduced from £37.419 to £21,633. As regards our holding in the Canadian Land Corporation, of which I spoke to you last year, no fresh sales have been made. Your company's share of the profits which are held in suspense are over £3,000.

"As regards the obtaining of fresh money which will be required to carry on our business and to take advantage of the demand which there will certainly be in the autumn from the farming community, the board are considering the advisability of borrowing on short-term debentures. The reason for this is that we find it impossible, owing to the condition

DIVIDEND No. 132

Notice in hereby given that a Dividend of Two and three-quarters Per Cent. for the current quarter, being at the rate of Eleven Per Cent. per annum, upon the paid-up capital stock of the Bank, has this day been declared, and that the same will be payable at the Bank and its Branches on and after the 1st day of September next, to Shareholders of record at the close of business on the 15th day of August next.

By order of the Board
THOS. F. HOW,
General Manager.

The Bank of Toronto, Toronto,
July 22nd, 1914.

of the market and the demand by the investing public for a higher rate of interest for all securities, especially Canadian, to issue any of our debenture stock at a price except one that would be damaging to the credit of the company and entail a heavy discount to be written off. We shall obviate that if we possibly can.

Position in Canada.

"You may like to hear about the position in Canada, as to which we have received an important letter from our managers which speaks for itself, and which I will read to you. They say that the farming community is financially sound, and the crop which was harvested last year was an excellent one. More than the usual amount of ploughing was done, and the seeding is progressing favorably. The spring has been rather backward, which has affected some of the heavier and low-lying lands, but probably 70 per cent. are not affected, and seeding is being carried on most satisfactorily. Generally speaking, confidence has been established throughout the whole country; the only anxiety has reference to a few of the low-lying districts, where seeding was later than elsewhere, and where good weather will be required in August to mature the grain. The farmer's obligations were reduced very materially during the winter. The money scarcity warned the farmer not to incur any engagements thoughtlessly, and the lesson has sunk so deep that the farmer is buying nothing more than necessities at the present time. Underlying conditions are sound; with the collapse of the land craze, the farmer is turning his attention to a more thorough cultivation of the soil, and better farming methods are in evidence everywhere. Mixed farming is coming into general favor, and a spirit of economy is in the air. There is every evidence that the farming community is entering upon a period of more productive power."

◆

REAL ESTATE NOTES.

The annual report of the Montreal assessor's department declares that, while taxable property in the city amounts to $611,063,099, the exempted property is $180,750,146. Church property alone represents more than $19,000,000. Of the total, the Roman Catholic Church owns $10,277,000, and the Protestant Churches $8,860,000.

City assessment has shown an increase of $155,245,946 during the past year. In 1912 it was $636,567,299, and in 1913 it was $791,813,245. Exempted property alone rose from $136,350,724 to $180,750,146. The area of the city is 26,121 acres, or 1,896 square feet to each inhabitant.

Land, buildings and plant belonging to the Canadian Pacific Railway are assessed at $16,322,630. The Grand Trunk comes next with $8,304,350, and the Montreal Tramways Company third, with $5,092,435. The assessment of the Canadian Northern is $3,556,553; of the Montreal Water and Power Company, $2,384,800; and of the Bell Telephone Company, $2,439,700.

The value of church property of every description in Montreal reaches $85,499,289. The Catholic Church's share is $54,763,031, and the Protestant Churches $30,686,258.

The Roman Catholic Episcopal Corporation at Regina will erect a block of workman's cottages, at a cost of about $100,000. The cottages will be rented to tradesmen and mechanics in Regina at a low rate. The city has promised to install the necessary water and sewer connections. The houses will be modern in every respect, containing seven rooms and bath, and heated by hot air furnaces.

Eight hundred and eighty feet of river frontage at Fort William owned by Mrs. Ingalls of Duluth has been disposed of to the N. M. Patterson Company as an elevator site. The price paid is stated to be $60,000. The sale was effected by the G. R. Duncan Company.

It has Correspondents in all Cities of importance throughout Canada, the United States, the United Kingdom, the Continent of Europe, and the British Colonies.

Collections made in all parts of the Dominion and returns promptly remitted at lowest rates of exchange. Letters of Credit and Travellers' Cheques issued available in all parts of the world.

CANADA'S TRADE WITH AUSTRALIA

It Declined Last Year—Analysis of Figures by Canadian Trade Commissioner D. H. Ross

The returns in relation to the 1913 trade between Canada and Australia have been made available in advance of publication by the Commonwealth statistician, reports Mr. D. H. Ross, Canadian trade commissioner in Melbourne.

For comparative purposes, the total between the two countries for the last four years is shown in the appended table:—

	1910.	1911.	1912.	1913.
Australian imports from Canada	£802,045	£844,235	£ 977,075	£ 964,826
Australian exports to Canada	100,398	118,284	161,595	169,193
Total trade	£902,443	£962,519	£1,138,670	£1,134,019

Recent investigation disclosed the fact that goods of Canadian origin have been passed through the customs as products of the United States and, as such, have been credited to imports from that country in the Commonwealth trade returns. As an example, the Australian figures credit Canada with having supplied fresh fruit to the value of only £241, whereas during the season of 1913—September to December—64,999 cases of apples and 768 cases of pears, shipped at Vancouver, were landed at Sydney. Incorrect classification obtains in other lines of goods and products, which tends to confirm the conclusion that the figures in the accompanying schedules are considerably less than the actual results attained by Canadian exporters. Prompt measures are being taken, in regard to ascribing the country of origin, towards ensuring a more correct classification for future imports.

Imports from Canada.

The principal items of Canadian goods and products which show increased trade in 1913, in comparison with the previous year, are scheduled thus:—

Articles.	1913. Increase.
Sausage casings	£ 211
Oatmeal	2,396
Cereals, n.e.i.	151
Hops	2,091
Spirits, etc.	72
Apparel and attire	5,284
Boots and shoes	5,537
Sewing silks	606
Other textiles	115
Oil, fats and waxes	1,619
Agricultural implements	10,099
Engines	879
Other machinery	1,036
Rubber manufactures	12,355
Wood manufactures	1,230
Vehicles, motor cars and parts	34,297
All other articles	481

The 1912 imports from Canada constituted a record by an advance of £132,840 over the previous year. This encouraging increase was not—according to the official returns—maintained in 1913. To the financial stringency, reflected by a marked contraction in the customs revenue and a reduction in the value of imports into Australia, during the latter half of 1913, can be ascribed the chief contributing cause. The most noticeable increases in Australian importations from Canada in 1913 have been made in vehicles, particularly motor cars and parts, by £34,297; rubber manufactures, £12,355; agricultural implements, £10,099; rubber footwear, £5,537; apparel and attire, £5,284; oatmeal, £2,396; hops, £2,091; oils, £1,619; manufactures of wood, £1,230; machinery, £1,036; and engines by £879.

Articles Showing Decreases.

In the subjoined schedule the articles showing the principal decreases in the 1913 Australian imports from Canada, as compared with 1912, are enumerated:—

Buying of Salmon.

The items showing substantial decreases are fish, fruit, metal manufactures, timber, printing paper and drugs. British Columbia packers of sockeye salmon secured large orders in 1912, owing to their prices being declared a week or more before those of the Alaska packers were available, and the impression of Australian buyers that Alaska red salmon would be higher in price than subsequently quoted. There was hence a considerable carry-over of stocks of sockeye to 1913, which is reflected in the decreased imports for last year. The stocks of canned salmon held in Australia to-day are small, but the present indications are, in view of higher prices being demanded by packers, that decreased quantities of sockeye will be ordered in 1914, but the values will closely approximate the figures for 1913. When the retail prices for salmon reach a figure not attractive to ordinary buyers, the normal demand is transferred to herrings and other canned fish procurable at lower rates.

To incorrect classification can be ascribed the figures in regard to the importation of fruit, for in 1912 Vancouver shipped 26,706 cases of apples to Australia whereas in 1913 about 70,000 cases from the same port were landed at Sydney. To a similar cause may, to some extent, be attributed the apparent decline in manufactures of metal. The cause of the decreased Australian imports of Canadian timber were set out in a recent report. Despite increased production, the decline in values of printing paper imported from Canada continues. The advance in prices of some makes of organs is responsible for lesser values. Until the complete trade returns of the Commonwealth are available—showing imports from all countries—the significance of the decreased imports of some lines of Canadian products in 1913 cannot be determined.

The trend of the chief items comprised in the exports from Canada to Australia for the six years from 1908 to 1903, inclusive, is shown in the following comparative schedule:—

	Fish in tins.	Printing paper.	Agricultural implements.	Lumber.	Vehicles, motor cars, &c.
	£	£	£	£	£
1908 ...	43,201	180,701	130,427	36,768	5,145
1909 ...	48,252	136,009	150,541	84,849	15,621
1910 ..	97,347	158,624	258,046	77,150	46,168
1911 ...	60,213	133,203	260,055	121,328	64,778
1912 .	76,314	170,173	250,609	70,022	176,742
1913	52,755	140,050	260,708	67,089	211,030

Australian Exports to Canada.

The direct Australian exports to Canada are chiefly shipped by the Canadian-Australasian mail steamers loading at Sydney for Victoria and Vancouver. This year (1914), several cargo steamers are engaged in the trade between Australia and the Pacific coast ports of Canada and the United States. With the exception of an occasional cargo steamer loading wool at Sydney and Melbourne for Boston, there are no direct shipments from Australia to the eastern ports of North America. Transhipments are, however, made at Liverpool for Canadian ports. The bulk of the Australian exports to Canada is comprised of items connected with the primary industries of the country, such as frozen mutton and lamb, hides and skins, butter, foodstuffs of vegetable origin, glycerine and lanoline, wool and timber. The figures for 1913 show an expansion of £7,598 in comparison with the previous year. Despite the operation of the preferential tariff in favor of New Zealand products, it will be observed that Australia has been able to substantially increase the exports of frozen meats. If the cargo steamer service across the Pacific is maintained, Australian exports to Canada should show considerable expansion in 1914.

Acts as Executor, Administrator, Trustee, Guardian, Receiver, etc.

Also as Agent for management of Estates, Investment of Moneys etc.

Investments made exclusively in first mortgages on improved farms in well established districts, furnishing absolute security with a fair return on the investment.

Special arrangements made with Insurance Companies and Municipalities.

JOHN R. LITTLE, Managing Director.

Why Almost Two Hundred Corporations, Firms or Private Persons Have Invested in our Debentures

Because we have devised a form of debenture secured by deposit of first mortgages to the amount of 150% with a trustee which gives practically absolute security. If interested in a 5% investment wholly devoid of risk, apply to

THE EMPIRE LOAN COMPANY

WINNIPEG, CANADA

CANADA HAS PASSED SUPREME TRIAL

Sudden Cessation of Activity Has Been Borne Well, Says Sir Edmund Walker

"The present can best be characterized as a waiting time for Canada. We are, as it were, looking round and taking stock, noting the progress made, sizing up future prospects and taking into account the indications of the past."

So said Sir Edmund Walker in a recent interview with the London Financial News. "The most marked feature resulting from such a survey is the knowledge gained that, when Canada was brought face to face with that monetary condition which had been predicted for years past, the country stood the test well," he continued. "The supreme trial, feared by many and regarded as inevitable by others, has been safely passed through. If you turn your attention to the West to-day, you will observe that the real estate speculation has been completely checked. And this has come about without any serious financial effect from a general point of view. The sudden cessation of activity has on the whole been borne well.

Evil of Speculation.

"It is quite useless to speak of the evil of such speculation as recently obtained in our newborn cities. It is pious, of course, to wish that such things might not be, but one might just as well wish that a child would pass through life without ever contracting infantile diseases. Although we may hope, we have certainly no right to expect that such exceptions will be made to the general rule. The western provinces are, after all, only children, liable to all infantile disorders, and certainly the West, with its wonderful future, its sudden opening up, its phenomenal immigration, was the most natural place in the world to be effected by the disease of real estate speculation. Winnipeg in this respect escaped much of the severity occasioned by the epidemic. The city had had previous experience; it had been to a certain extent inoculated, and as a consequence business in Winnipeg real estate was much more measured and restricted than in any other part of the West.

One Large Crop.

"Since the pinch of monetary stringency began, the West has gathered one large crop, the proceeds of which have been used almost entirely to liquidate indebtedness and not in any way to benefit further expansion. Undoubtedly last year's great crop came at a most opportune time and helped to avert more serious consequences. Our earnest hope now is that the West will not incur new liabilities in any marked degree for another year or so. This, I am sure, will be their policy and, if so, with another good crop to their credit they should be in a much sounder position than ever before.

"Activity in Eastern Canada, and more particularly as regards our manufacturing industries, will necessarily be on a more moderate scale until such time as the prosperity of the West has completely returned. Very large amounts of money have still, of course, to be spent in the West on railway construction already planned.

As to Municipal Borrowings.

"With regard to municipal borrowings, it is interesting to know, that in spite of the late difficulty in floating some issues, municipal bonds are to-day difficult to buy. The demand for these securities, in Canada particularly, is rapidly growing. One hopes, however, that municipalities will be much more reluctant to incur fresh debts than some of them have been hitherto, and if the buyer of municipal bonds would only discriminate, if he would only make use of the information which lies at his disposal in order to select the more carefully managed municipalities, he would not only be protecting himself in so doing, but also contributing his fair share toward keeping that class of security sound.

"Canada has undoubtedly put forth every effort to exploit her greatest resources, and having done that she has now to devote the whole of her energies toward justifying the money already expended by paying the closest possible attention to the production of wealth from the soil."

◆

MUST INCREASE GOLD RESERVES

So Says Sir Felix Schuster—Great Banks Have Enlarged Their Reserves

The strengthening of the Bank of England's gold reserves is being urged by Sir Felix Schuster every time he makes a public utterance. Last week, at a bank meeting in London, he advocated it and three months ago in an address to an association of English bankers, he also emphasized this point. Sir Felix said then that the world was moving at a rapid pace, and new issues, many needed for the development of enterprise, were still forthcoming, week by week almost. He thought, therefore, that considerable caution and co-operation with the Bank of England would be needed if gold reserves were to be sufficiently strengthened for the gold demands which would arise in the autumn.

Continental Bank's Gold.

The strengthening of their stocks of gold by the great continental state banks during the last 12 months was a feature not to be overlooked. He thought it was the generally acknowledged opinion of bankers that the gold reserves in Great Britain needed further strengthening, although a good deal had already been accomplished. He reminded them that a committee of bankers, with Lord St. Aldwyn as chairman, was now considering this question, and he asked the bankers present not to lose patience because no definite results had yet been announced. The discussion of the matter had already brought about great hopes.

He alluded to an interesting feature in the recent history of banking—the increase in size of some British banks, one of which, he believed, had now exceeded the £100,000,000 limit. These increases showed what a great part the English banks played in promoting the trade and commerce of the world, and how great was the responsibility which fell to those who had the administration of such vast sums of money.

Large Increases Recently.

A table has just been published by the Berliner Tageblatt in reference to the gold reserves of the principal banks throughout the world at the end of June, 1914, in comparison with the position at the corresponding date in 1913. The table, which is given below, in pounds sterling, indicates large expansion for the banks as a whole, only one institution showing a reduction:—

Institution.	Gold reserves on June 30th, 1914.	Increase as compared with June 30th, 1913.
Banque de France	£162,307,000	£29,689,000
Russian Imperial Bank	159,253,000	18,605,000
New York Associated Banks .	83,970,000	12,392,000
German Imperial Bank	65,307,000	11,259,000
Austro-Hungarian Bank	52,207,000	1,837,000
Bank of Italy	48,875,000	....
Bank of England	40,082,000	3,035,000
Bank of Spain	21,264,000	2,983,000
Belgian National Bank	13,451,000	1,590,000
Netherlands Bank	13,386,000	1,279,000
Swiss National Bank	7,060,000	257,000
Bank of Sweden	5,823,000	121,000
Bank of Norway	2,707,000	388,000

The total of the gold reserves of the banks in question amounted to £675,782,000 on June 30th, 1914, being an increase of £83,435,000 over June 30th, 1913. The Bank of Italy alone experienced a decrease, the reserves at the end of last June being £1,386,000 less than a year previously. The gold reserves of the Bank of Italy, together with those of the Belgian National Bank, also include the silver reserves held by these two institutions.

◆

The final shipment of wool, sold by the farmers of Saskatchewan, through the medium of the Saskatchewan department of agriculture, has been shipped from Regina. Four cars, containing 70,000 pounds of wool, have been sold at 17¾ cents per pound. After paying charges the farmers will net 17.54 per pound.

CANADIAN AGENCY TANGLE

Receiver Gives Hint that Liquidation Would Not Realize Estimated Value of Assets

The Canadian Agency's affairs were extremely intricate. This fact was emphasized at a meeting of the creditors of Chaplin, Milne, Grenfell & Company, Limited, in London, the other day. This is one of the financial failures, the blame for which does not belong to Canada, although the scene of many of the company's investments was in the Dominion. Mr. H. Brougham, Senior official receiver, said:—

"The company was incorporated on December 21st, 1899," said the receiver, "with a nominal capital of £350,000, divided into 20,000 preference shares of £10 each, and 150,000 ordinary shares of £ each, and its objects were to acquire the business of Morton, Chaplin and Company, at 6 Princess Street, E.C. With regard to the composition of the board, Mr. A. M. Grenfell resigned his position as managing director in September, 1902, and his directorship in January last, but since 1902 he has ceased to take any active part in the management or control of the company's business. The original capital to the extent of £300,000 was privately subscribed for by the directors and their friends, and the balance, £50,000 (in ordinary shares), was issued as fully paid to the partners in the business taken over. The capital was increased from £350,000 to £700,000 in May, 1913, but none of the new capital has been subscribed for or issued. The average profits of the business for the five years immediately preceding the formation of the company were £18,000 per annum

"The general business carried out by the company was similar to that of the private firm—namely, agency business with the Morton Trust Company of New York, in exchange bills, collections, etc., the granting of commercial credits by accepting clients' bills against merchandise, coupon payments in respect of foreign and Colonial loans, and the payment of interest on behalf of various English companies, the issuing of debentures, shares and other securities of foreign and Colonial undertakings, underwriting new issues, accepting moneys on current and deposit accounts from clients, and the management of various companies. The annual net profits as disclosed in the accounts have varied, the lowest being in 1907, £9,516, and the highest in 1911, £33,813. The profits disclosed for last year, 1913, were £22,329. The dividends paid average at about 4¾ per cent. on preference and 8 per cent. on ordinary shares. In May, 1913, the articles were amended so as to provide for a fixed rate of 5 per cent. upon the preference shares.

Of the Canadian Agency.

"The Canadian Agency, Limited, was formed by Mr. A. M. Grenfell in July, 1906, and 15,000 shares in that company were applied for and taken up by Chaplin, Milne and Company. It is stated that Chaplin, Milne and Company had nothing to do with the formation of the agency, but the board were aware that Mr. A. M. Grenfell was the moving spirit in the undertaking. The two companies worked independently of each other, although from time to time Chaplin, Milne and Company accepted and took up offers of business which came from the agency.

"There was also an understanding, probably from the commencement, that Chaplin, Milne and Company were to lend to the Canadian Agency, upon security, moneys received from bond issues by Chaplin, Milne and Company through the agency's introduction. A number of public issues of bonds and shares have been made by the company from 1906 to 1913 on the introduction of A. M. Grenfell and the Canadian Agency. The majority of such issues were successful, and the company received a commission on the results. In some cases the company participated in the underwriting.

Heavy Deposits Made.

"For a considerable time past deposits have been made with Chaplin, Milne and Company, by several companies connected with the Canadian Agency. These deposits were made without security, interest being allowed from time to time at Stock Exchange rates. From these deposit accounts loans were made to the Canadian Agency, and the amount so loaned stood at £112,000 on May 1st last. As previously stated, the amount of these loans ("land loans") was con-

solidated with the other loans due from the Canadian Agency, and securities valued at £620,976 were taken in part discharge of the agency's indebtedness to Chaplin, Milne and Company. The companies making these deposits, which stood at seven and fourteen days' notice, began to withdraw their moneys, and it was the withdrawal of these deposits to the extent of about £112,000 during May last which caused Chaplin, Milne and Company financial embarrassment, and was one of the principal reasons which led to their suspending payment early in June.

Obtained Some Loans.

"Since the formation of the company temporary loans have been made to it by its bankers. A deposit of securities was kept there, so that, if extra funds were temporarily required, they could be obtained by means of an overdraft against such securities. Prior to 1912 the loan account with the bankers was rarely used, and then only for temporary purposes. During 1912-13 the highest balance on the loan account was £90,000 and the lowest £10,000. There was no bank loan outstanding on December 31st, 1913. The company began to borrow substantially from its bankers in the early part of this year, owing to the inability of the Canadian Agency to repay the moneys advanced to them, chiefly in connection with the Chilean Northern Railway. The bankers' loan steadily increased from £20,000 to £145,000, the maximum amount. The loan has now been reduced to £118,000 by the sale of securities. It is anticipated the securities, if carefully realized, will produce sufficient to cover the loan.

"At this date private securities belonging to Mr. Ernest Chaplin had been deposited with the bankers, and Mr. Chaplin authorized these private securities to be held by the bankers as additional security against the further loans to the company. These securities are now held by the bankers, together with the company's securities, against this advance of £145,000. The company has also obtained a loan from another of its bankers, which, starting at £10,000 early in this year, has been increased to, and now stands at, £50,000. Securities are held by this bank, from which on realization it is anticipated will yield a surplus. Further loans from various firms to the extent of £100,000 have had to be raised by the company this year against the deposit of securities, which loans are still outstanding. It will be seen that Chaplin, Milne and Company have thus been compelled to borrow since the commencement of this year a sum of £295,000 through the default of the Canadian Agency to repay its loans, the securities held for which had become unmarketable.

Cause of the Suspension.

"The directors state that the immediate cause of the suspension was the failure of the Canadian Agency to repay their loan to the company, and Chaplin, Milne and Company's inability to meet the run made by various companies for the repayment of deposits made with them. The directors further state that at the end of December last the Bank of England declined to discount the company's bills. The insolvency of the company is attributed by the directors to the depreciation in value of the securities held for investment and on loan account, which induced its borrowing powers and practically made impossible for the company to realize the securities at anything like their ordinary value or to raise other funds thereon. The time was most unfavorable for realization, as all securities were depreciated to an unprecedented extent. This applies more particularly to the securities taken over from the Canadian Agency."

The statement of affairs submitted by the managing directors of the unfortunate company shows liabilities of £917,442, and assets of £887,525, or a deficiency as regards creditors of £29,917. Regarding these figures, the assistant official receiver said:—

"I must point out, however, that the figures placed against these assets are the directors' estimate. I have not seen anything to satisfy me that this estimate is justified, and, on the other hand, in view of the fact that many of the undertakings in which the company is interested are still in course of development, and that many of the securities held by the company have no special quotation, I think it only right to warn the creditors that, in my opinion, the assets are not likely in a liquidation to realize anything like the values placed upon them by the directors, and Sir William Plender, the special manager, shares my view that the assets are very considerably over-rated."

NEW RIVALRY IN BUSINESS

What is to be the Latitude and Longitude of Modern Commerce?

"We are in the midst of a reorganization and readjustment of social and economic relations which involve all lines of business and to a degree our own among the number." Mr. R. Lynn Cox, general counsel and manager of the Association of Life Insurance Presidents, told the Life Underwriters' Association of Canada at the Halifax Convention.

"Already I fancy the average man realizes that for some time past business has been headed in the wrong direction, and that in order to save it from destruction the course of its sailing must be changed. And it ought to be a matter of satisfaction to us as life insurance men to know that as our business was one of the first to experience the need for reform, we now have an advantage by having changed our course somewhat before others began to realize that in the end they, too, would have to change theirs. At any rate, we do not find ourselves submerged in the gloom that now seems to overhang other large business interests, and if I mistake not, all are about to emerge from the fog of uncertainty and distrust into a brighter and more hopeful atmosphere.

"Within the last hundred years we have entered upon an era of specialization. Only last week we learned from a threatened strike in New York City that the inspection, or, the candling of eggs, has been relegated to a group of people who do little or nothing else from one year's end to another, and that expertness up to the point of modern requirements in specialization can be achieved only by years of practice. With farms to cultivate, factories to operate, railroad trains to run, stores to keep, etc., enough people to form a trades union can be found sitting day in and day out sorting and classifying eggs for other people to eat, which still others have produced. Specializing, which has been carried into every branch of trade, is one of the causes of the selfish disregard for the interests of others which came to be a marked characteristic of the modern business conditions. There is, and can be, no personal relation between the egg candler and the thousands who are dependent upon him for the quality of this important part of their food supply. He does not know, nor can he care for them or their interests, while they are even unaware that such a service has been rendered for them by any one. The man in nearly all lines of work on whom society is dependent for a good and satisfactory product has no acquaintance or direct relation with the people consuming his product. Specialization in business has tended to sever personal relations between producer and consumer, it has made man more efficient but less human in his dealings with other men.

By-Products of Business.

"The world seems almost to have forgotten for the moment that it is through business mainly that men are brought into relation with each other, and that the pleasures and recreation of life are but the by-products of business activities. People do not seem to realize that business is merely the collective name for the various activities through which men render economic service to the world and in exchange for which they became enabled to command the service of others. The thought that business is something separate and apart from mankind—something which may be decried and even destroyed without a pang of regret—arises in part from the fact that we have become accustomed to convert our service and our products into money and then with that money to acquire from others the service and products we need for ourselves.

"No one believes that, in view of the economic advantage of carrying on industry as it is done to-day, there is a possibility of returning to former methods of manufacturing and the re-establishment of the old-time relation between producer and consumer, or between employer and employee, yet we all believe that a solution must be found for the problem which now confronts us. Will it not come from an enlargement of our sense of duty and responsibility to mankind in general, that is from a new conception of the service we should render to our fellowmen in return for which we hope to be better served by them. Are we not able to see the dawning of a new day in the attitude being taken by men at the head of some of our largest

business institutions. Competition has a tendency to keep service to customers up to a high standard. There is also the service which an employer of labor must render in directing in the interest of his employees as well as the public the business which affords him and his employees a chance to serve the world in some important economic way and in turn to be served by the world as to their needs in other respects. I have in mind all who contribute to the quality of a given product and to the successful marketing of it, whether he be manager, mechanic, truck-driver or office boy. By their collective service shall they be known in future.

Practical Profit Sharing.

"If we could but gain a better understanding of the fact that not money but rather the comforts of life which money will buy are the things which we really wish to achieve in this world, we would see that to furnish insurance in case of death and compensation in case of injury, shorter hours and better recreation facilities, safer machinery and better housing conditions, and the many other advantages to which the attention of the business world is being directed at the present time, are all in effect profit-sharing of a practical kind. These are direct contributions to human happiness, and they are showing us how personal interest in the welfare of others can be and is being extended beyond what was deemed sufficient up to that time that modern business developments substituted horizontal for vertical lines of cleavage in society. It is to be hoped that as captains of industry are brought to recognize duties lying outside of their obligations to stockholders, likewise employees will see that their interest in humanity must extend beyond their fellow unionists with whom they are in direct contact, since the sin of greed and selfishness does not become a virtue merely because opportunity for the exercise of it is limited.

"Large business interests are coming to see that the test of their right to live will come on the quality of their service to the public and the treatment of those subject to their control. Competition in future is going to include a healthy rivalry in the humanizing of business.

"Life insurance went through the fire of public criticism and emerged with its place in the economic world more firmly established. The reason for our salvation was not the amount of our assets nor the undoubted solvency of our companies that saved us. Nor was it alone because of the generally high character of the army of men engaged in the business that we escaped unharmed. It was because the business was founded on human sympathy and had always made its appeal to the better side of human nature. Though at times it has drifted from the course laid out by its pioneers it never went so far astray as to worship with other enterprises at what has been called recently "dividendolatry." It began as a mutual enterprise and even the entry of stock companies never changed its essentially co-operative character. Furthermore, the workers in life insurance are mainly in the field in direct relation with its customers instead of in factory or shop. In this respect it is in direct contrast with the ordinary commercial enterprise. Life insurance, therefore, never lost under specialization its human touch and never ceased to make a human appeal. And it is well for this body, representing, as in a sense it does, both company and policyholder, to consider the responsibilities resting upon it. You are business agents called upon to transact business on a business basis. But you are more than this. You are, or should be, the friends and confidential advisors of those with whom you deal. It is your duty to meet and mingle with them as men. It should be your privilege to see that they are treated fairly and frankly, at the same time losing no opportunity to show them why oft-times they cannot get from a company what, to the individual policyholder, sometimes appears just and reasonable.

◆

NEXT YEAR'S CONVENTION

Toronto was chosen for the next annual convention of the Life Underwriters' Association of Canada. Mr. J. A. Johnson, of Vancouver, put forth the claims of Western Canada and especially Vancouver for the distinction. He thought Vancouver especially appropriate next year in that it would enable the members to proceed to San Francisco to attend the great convention to be held there.

FIVE HUNDRED MILLION PEOPLE FOR MARKET

China and Japan Facing Canada's Western Front Door —Special Trade Report

"Upwards of 500,000,000 people inhabit China and Japan in a vast stretch of island and continent facing our western front door. Between lies a facile ocean now beginning to quiver beneath the swift keels of rapidly-increasing mercantile fleets. . . . On all grounds of enlightened business policy Canada and Canadian cannot afford to neglect the great and promising field which lies so advantageously opposite our Western gateways and which the Panama Canal has brought so much nearer our eastern ports."

So writes Sir George Foster, K.C.M.G., M.P., minister of trade and commerce, in a preface to a special number of the weekly report of the department of trade and commerce. This will be issued shortly. It is an interesting and valuable report upon the possibility of Canadian trade with China and Japan. It deals with a subject of growing interest to all Canadians and a copy should lie on the desk of every merchant and producer in Canada and should reach the hands of all who desire a concise and picturesque statement of the coming trade of China and Japan and of the future and perhaps decisive importance of these countries more particularly as regards the western portion of Canada.

The report is written by Mr. R. Grigg, commissioner of commerce, and is preceded by a letter of transmission giving an outline of its contents describing his journey, and concluding with reflection of the character and weight to which we have become accustomed by his previous work.

Effect of Panama Canal.

The first chapter deals with the possible effect of the Panama Canal and provides remarkable figures with regard to the development of traffic across the isthmus by the Panama and Tehuantepec Railways. A table follows showing Canadian exports to China and with comments upon the character and volume of such exports. While the report recognizes the probable development of trade in a multitude of articles which follow the establishment of a trade route, and increase of communication, it is shown that the more immediate interest to Canada is found in the export of flour and lumber to the Orient. The chapter dealing with the first of these products indicates the present production of flour in the western provinces; a table is given showing the exports of flour from the United States to the Orient for the past 21 years and instructive comments are made upon the principal figures.

An interesting paragraph deals with the movement northward of the flour export upon the Pacific coast and the reasons which account for that movement. A full argument is produced based upon the production of wheat and flour in competing countries, more particularly Manchuria, and remarkable information is afforded regarding the productivity of a soil subject to irrigation and unlimited labor under a hot sun.

Figures from Japan.

The report upon Japan, which is printed in the same booklet and follows that upon China, is equally interesting although different conditions have resulted in totally different reports. Nothing is more remarkable than the contrast between the two countries. Whereas few figures are available with regard to China, a contrary condition prevails in Japan, and interpretation of the economic condition of the country is largely expressed by tables of figures, but the full and interesting comment upon them removes the work from the "dry as dust" character which so commonly marks such papers. Canadians may sometimes forget that the phenomena due to the wonderful development of their own country does not exhaust the important problems in course of solution elsewhere and it is highly desirable that development likely to provide a subject of engrossing future interest to Canada should be presented in brief and graphic terms and handled in the masterly fashion found in this report. It is not given to any man to do more than suggest a possible outcome of the factors in operation, and Canada has some experience of the foreigner who spends three weeks in a country and writes a book. In China this is described as "seeing China through a porthole"; but a characteristic of the report under review is the moderation of its expressions and the deference shown to the experience of competent authorities.

CANNERIES IN BRITISH COLUMBIA

Fruit, Fish and Freight Prospects on the Pacific Coast —No Motor Bus for Nanaimo

(Staff Correspondence).

Vancouver, July 25th.

When the Panama canal is in operation for commercial tonnage, it is expected that announcement will be made of the new lines that will extend their service to the North Pacific ports. That several of the big European steamship companies will come to this part of the Pacific has been suggested before, and it has been anticipated a big increase in shipping. Mr. Frank Waterhouse, of the Waterhouse Company, agents for the Royal Mail line and other interests, has returned from a trip to Europe and states that at least three and perhaps four lines will send steamers this way. He says that shipowners of Europe are manifesting keen interest regarding future business on this coast, and look forward to development of the export grain trade. With much grain being shipped from Puget Sound ports and Portland, they can see no reason why Canadian grain should not come west from the prairies to Pacific ports for shipment to Europe. The International Mercantile Marine Company is one to announce its service and puts the first sailing of the Kroonland, one of its big boats, from New York at May 1st next year. The Royal Mail line is to augment its service to this coast within the next six or eight months by five liners. Steamers of this line come to Tacoma to take grain.

Harbor improvements are steadily proceeding at Victoria, Vancouver and New Westminster, as was shown in last week's issue of *The Monetary Times*.

Vancouver's Harbor Charges.

Vancouver's harbor commission has announced a scale of charges for the use of the harbor, the levies are lower in comparison to other ports, and much lower in comparison to the charges made by the private owners of docks. Some protests have been made against the scale. As it is the intention of the commission to make the harbor at least part-sustaining, the charges will stand in the main.

Business for Fruit Canneries.

That business is available for fruit canneries in British Columbia is shown by the large order received by the company which has a jam factory at Nelson. The contract calls for twenty-one carloads, which will aggregate in weight 600,000 pounds. With the development of fruit growing in the province, canneries and jam factories follow, and if there is prairie trade like this it will help to put the fruit growing industry on a firmer basis.

The annual run of sockeye salmon has begun, but so far the catch has been very light. It is early in the season yet, but this is not reckoned a big year. Last year, the pack was large, 1913 being the year of the quadrennial run. The salmon pack on the coast is an important factor in its prosperity.

The city council of Nanaimo has refused the application of the District Motor Bus Company of Victoria to install a motor bus service in Nanaimo and district, in return for certain concessions, which included a free site for a garage, free taxes and free water for ten years.

◆

REFINING COMPANY WILL ISSUE BONDS.

By-laws were passed unanimously at the annual meeting of the Atlantic Sugar Refineries to-day authorizing the issue of $2,000.000 6 per cent. bonds. Ninety per cent. of the shareholders were represented either in person or by proxy. The new issue will bring the capitalization of the organization down from $7.000,000 to $3.500,000 common stock.

◆

A brick plant is to be established on the property of the Canadian Resources Development Company at Port Arthur, Ont., for the manufacture of brick. At first the plant will turn out 5,000 bricks daily.

change radically with time but the life assurance policy changes only as the reputable and progressive life company works towards a simpler and more liberal contract.

Progress in the assurance world is marked by the new policies just issued by the Sovereign Life As regards liberality and attractiveness and for a clear and concise statement of what the Company and the assured agree to do they are without equal. Their simplicity is a revelation to those confused by the lengthy legal wording of the past.

Test the truth of the above by securing a sample contract.

WHAT BANK ACT SAYS ABOUT MERGER

Consent of Finance Minister Must be Obtained—Law is Lengthy on Amalgamation

The bank act of Canada, as amended in 1913, has much to say regarding the purchase of the assets of a bank, as in the recent case of the acquirement by the Bank of Nova Scotia of the Metropolitan Bank. Commencing at clause 99, it says:—

99. Any bank may sell the whole or any portion of its assets to any other bank which may purchase such assets; and the selling and purchasing banks may, for such purposes, enter into an agreement of sale and purchase, which agreement shall contain all the terms and conditions connected with the sale and purchase of such assets.

2. No agreement by a bank to sell the whole or any portion of its assets to another bank shall be made unless and until the minister, in writing, consents that an agreement under subsection 1 of this section may be entered into between the two banks.

100. The consideration for any such sale and purchase may be as agreed upon between the selling and purchasing banks.

If in Shares of Capital Stock.

2. If the consideration, or any portion thereof, is shares of the capital stock of the purchasing bank, the agreement shall provide for the amount of the shares of the purchasing bank to be paid to the selling bank.

3. Until such shares so paid to the selling bank have been sold by such bank, or have been distributed among and accepted by the shareholders of such bank, they shall not be considered issued shares of the purchasing bank for the purposes of its note circulation.

101. The agreement of sale and purchase shall be submitted to the shareholders of the selling bank, either at the annual general meeting of such bank or at a special general meeting thereof called for the purpose.

2. A copy of the agreement shall be mailed, postpaid, to each shareholder of such bank to his last known address, at least four weeks previously to the date of the meeting at which the agreement is to be submitted, together with a notice of the time and place of the holding of such meeting.

May be Executed if Approved.

102. If at such meeting the agreement is approved by resolution carried by the votes of shareholders, present or represented by proxy, representing not less than two-thirds of the amount of the subscribed capital stock of the bank, the agreement may be executed under the seals of the banks, parties thereto, and application may be made to the Governor in Council, through the minister, for approval thereof.

2. Until the agreement is approved by the Governor in Council it shall not be of any force or effect.

103. If the agreement provides for the payment of the consideration for such sale and purchase, in whole or in part, in shares of the capital stock of the purchasing bank, and for such purpose it is necessary to increase the capital stock of such bank, the agreement shall not be executed on behalf of the purchasing bank, unless nor until it is approved by the shareholders thereof at the annual general meeting, or at a special general meeting of such shareholders.

Increase of Stock.
